Preface

The Statistical Yearbook of Norway 2005 contains statistics on Norway and main figures for the Nordic countries and other countries selected from international statistics. As opposed to previous editions, the international overviews are integrated with the other tables and figures and no longer make up separate chapters. This is also the case for Svalbard, which is only represented with some main tables. For more information on the Svalbard archipelago, we refer you to the publication Svalbard Statistics 2005.

This year's edition has been extended to include more main figures and figures on the development over time, as several detailed tables have been taken out. The yearbook also has some new material, for instance tables on overweight in the Norwegian population, international R&D statistics, household energy consumption and statistics on holiday houses. The yearbook's 477 tables and figures present the main tendencies in official statistics in most areas of society. The list of tables and figures and an index at the back of the book provide easy access to relevant information. In addition, source information and Internet addresses below the tables make the yearbook a good starting point for those who are looking for more detailed statistics.

The statistics are based on data gathered in statistical surveys and from administrative data, which, in cooperation with other public institutions, have been made available for statistical purposes. Some tables have been prepared in their entirety by other public institutions. The statistics follow approved principles, standards and classifications that are in line with international recommendations and guidelines.

A Norwegian edition of the yearbook is also available. Both editions are available in electronic format on Statistics Norway's website: <http://www.ssb.no/>.

The Statistical Yearbook of Norway 2005 has been edited by Ingrid Modig in cooperation with Jan Erik Kristiansen. Siri Boquist is responsible for the design. In addition, more than a hundred people from within and outside Statistics Norway have made important contributions to this edition.

Geographical survey

The Kingdom of Norway consists of the mainland, the archipelago of Svalbard and the island Jan Mayen.

The mainland consists of continental Norway and every island, islet and rock within the Norwegian baseline.

Svalbard consists of Bjørnøya, Spitsbergen, Nordaustlandet, Barentsøya, Edgeøya, Kong Karls Land, Hopen, Prins Karls forland, Kvitøya and every island, islet and rock situated between 74° and 81°N. latitude and between 10° and 35°E. longitude. By an international treaty (the Svalbard treaty), signed on 9 February 1920, Norway's sovereignty over the archipelago was recognised. On 17 July 1925 the archipelago was officially incorporated into the Kingdom of Norway.

Jan Mayen is an island situated in the northern Atlantic. On 8 May 1929 it was placed under Norwegian sovereignty, and became by law of 27 February 1930 a part of the Kingdom of Norway.

The Antarctic islands Bouvet Island, Peter 1's Island and Queen Maud's land (20°W. and 45°E.) on the Antarctic continent are dependencies. They were placed under Norwegian sovereignty by law of 27 February 1930, parliamentary resolution of 23 April 1931 and royal announcement of 14 January 1939, respectively. The dependencies are not part of the Kingdom of Norway.

¹New figures from 2005. The Norwegian Mapping Authority. ²The sea territory within the territorial limit. ³The sea territory within the baseline. ⁴The area between the baseline and 200 nautical miles (one nautical mile = 1 852 metres) is divided between the sea territory and the economic zone. ⁵The sea territory between the territorial limit and the territorial limit + 12 nautical miles. ⁶Norway's economic zone consists of the maritime zone between the territorial limit of 12 nautical miles and 200 nautical miles, but is limited to the border with neighbouring countries where the border line is further in than 200 nautical miles. ⁷New figures for the fisheries protection zone around Svalbard will be provided when the territorial limit between Svalbard/Greenland has been set out in an agreement between the parties. ⁸The sea territory between the territorial limit and the outer limit of the fisheries zone. ⁹Areas for regulated lakes are referring to highest regulated water level. ¹⁰Artificial lake. Reservoir for the Ulla-Førre hydroelectric power plants. ¹¹Also 520 km in Sweden (Klarälven - Göta älv), making it the longest river in the Nordic countries. ¹²Including glacier at summit.

Forest and agricultural areas

Forests cover about one third of the country. In Southern Norway the timberline lies at approx. 1,000 metres above sea level. The height of the timberline declines towards the west and the north. In many places in Western Norway the timberline reaches no higher than 300 metres above sea level, while in the far north it disappears, because the timberline is at sea level.

Spruce and pine dominate the coniferous forest areas. Birch trees also grow in large stands in mountainous areas between the conifers and high moors and in low-lying areas in Western Norway and in Northern Norway. Valuable deciduous woods are found in areas where the climate is especially favourable. The forestry picture is changing in many places through, for example, the reversion of former grazing areas into forest and reforestation of deciduous woods.

Forestry is carried out in areas with productive forests, which cover approx. 22% of the land area. Agricultural areas lie in the most climatically favourable parts of the lowlands, and account for between 3 and 4% of the land area.

Grain and fruit growing require hotter temperatures while grass and potatoes are less demanding, and are therefore cultivated farther north and at higher elevations than grain.

Settlement

The map shows populated areas and the number of inhabitants in major urban areas as of 1 January 2004. Urban areas with 5 000 or more inhabitants are shown with circles on the map. Oslo, the largest urban area, has 801 028 inhabitants as of 1 January 2004.

An urban area is an agglomeration of houses having at least 200 residents and where the distance between the houses does not as a rule exceed 50 metres, and is limited independent of administrative bounds.

Around three fourths of the population of Norway live along the coast. Other fairly densely populated areas are the plain regions of Eastern Norway and the valleys. Norway is one of the most sparsely populated countries in Europe, with 15 persons per km².

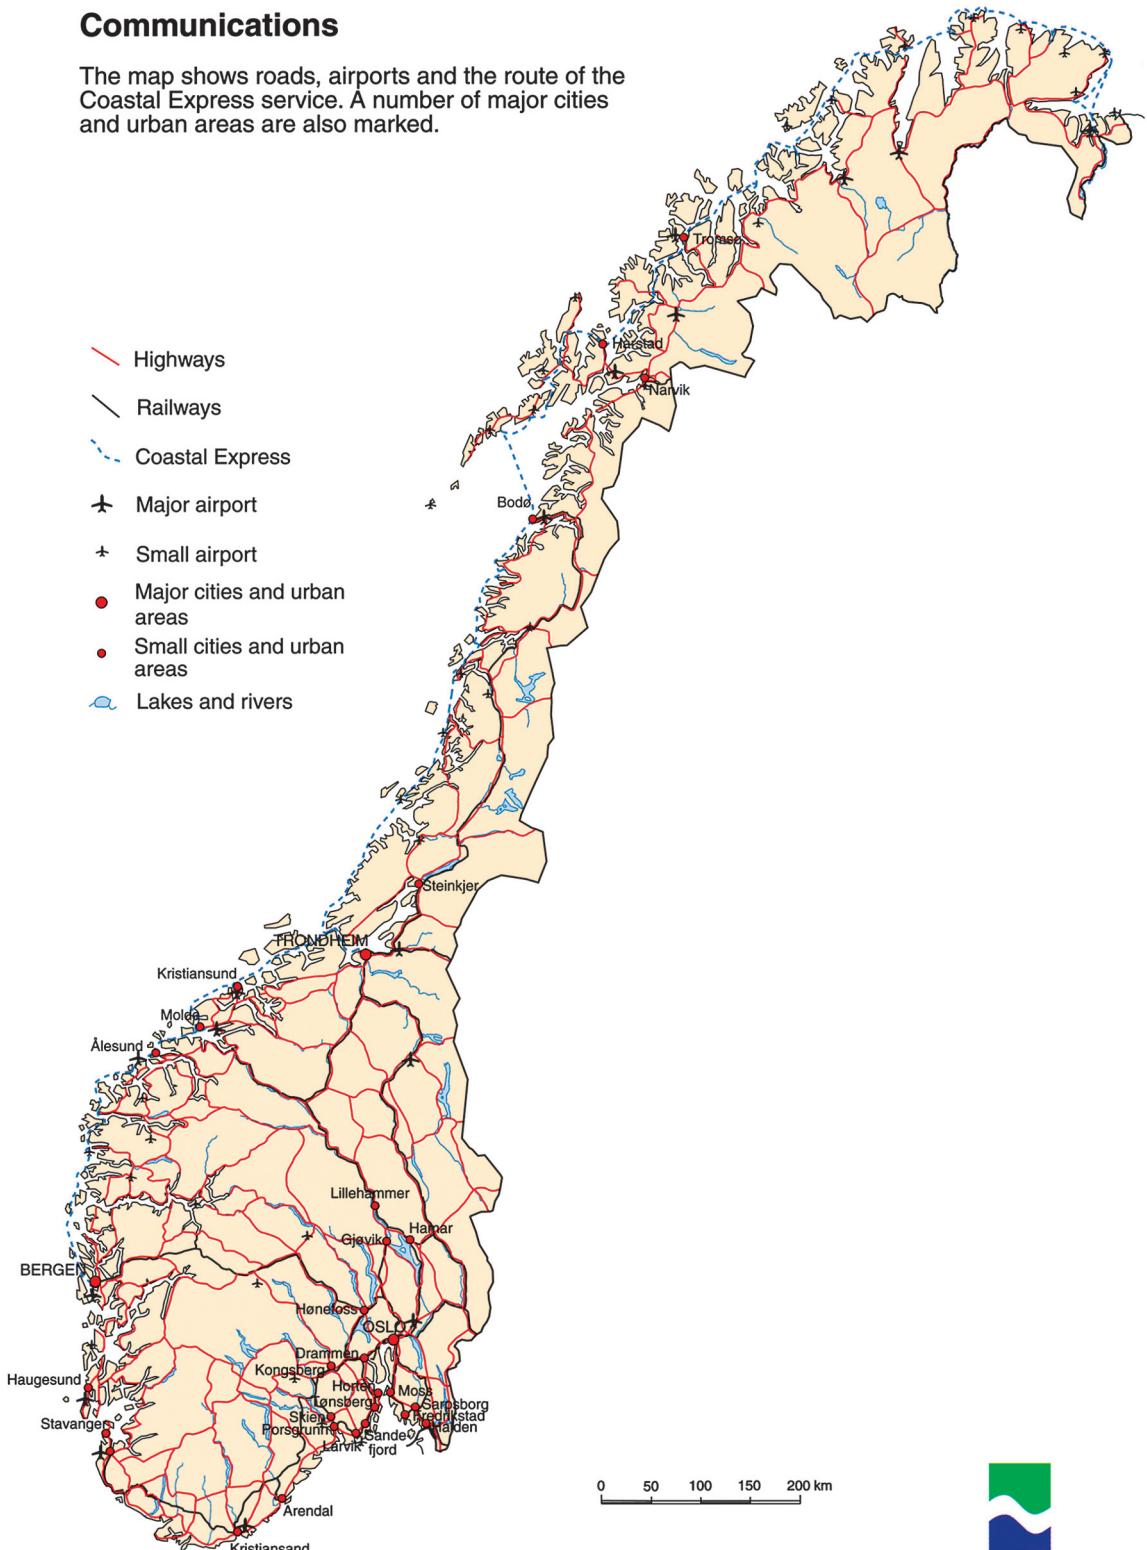

The smallest map shows the percentage of county inhabitants living in urban areas. In 1865, around 20 % of Norway's population lived in urban areas. By 2004, the figure had reached 77.6 %.

A high-angle aerial photograph capturing a massive waterfall cascading down a dark, rugged cliff face. The water flows in a wide, turbulent stream, creating white foam at the base. The surrounding terrain is a mix of dark green and brown, suggesting a forested or rocky hillside. The overall scene conveys a sense of natural power and beauty.

¹The table does not include nature relics (99 geological+about 190 trees) and flora and fauna protections. ²Some areas are located in more than one county. Thus the sum of the number in the counties is higher than the total number. ³From 31 December 2003 onwards the area figures are calculated based on digital overlay analysis, a higher accuracy are thus obtained. ⁴Flora and fauna protection areas (biotop protections). ⁵Protected according to the Svalbard law. These areas are not included in the sum figures for protected areas.

¹Mean annual energy production. The figures are not directly comparable because of reference to different time periods for inflow to the reservoirs; from 2000, the period 1970-1999 is used. ²Plans for not operational hydro power are continuously being reconsidered, and consequently the potential hydro power will vary from year to year. ³Includes "License granted" for the years before 1993. ⁴Included in "License granted" or "Under licensing" for the years before 2000. ⁵The growth is due to the fact that small plants between 50 kW and 10 000 kW are included in the potential.

¹Agglomerations having at least 200 inhabitants and where the distance between the houses as a rule does not exceed 50 metres. Before 1845 cities ("kjøpsteder" and "ladesteder") are considered as densely populated areas, for 1845-1950 also agglomerations outside cities. ²Not included Svalbard and Jan Mayen. ³The population figure is probably about 15 000 too low. ⁴Figures from new preparation of the census in 1980. ⁵Not included Holt-Dypvåg, 4 583 persons. ⁶The population figure is probably about 20 000 too low. ⁷Present population. ⁸Including 15 952 persons with no information on densely/sparsely populated areas in 1980, 25 005 persons in 1990 and 43 826 persons in 2001.

¹Urban settlement: An agglomeration having at least 200 residents and where the distance between houses as a rule does not exceed 50 metres. An urban settlement is delimited independent of administrative boundaries. ²In municipalities where more than 50 per cent of the population live in urban settlements, persons with no registration on urban/rural residence have been considered as inhabitants of the largest urban settlement within the municipality. ³With assignment of codes as in the 1970 census, the population figures of the major urban settlements would be: Oslo 649 031, Bergen 181 919, Trondheim 128 159 and Stavanger 91 129. ⁴New method for delimitation that may influence the comparability with former figures. ⁵From 1 January 1999 continuous urban settlements are merged to one settlement. ⁶The population figure is probably about 4 000 too low. ⁷Urban settlement Ålesund/Spjelkavik was by 1 January 2002 unified with Langevåg to form Ålesund urban settlement.

¹The number of persons by type of family may diverge minimally from the number of resident persons (population figures). This is due to a mismatch between family and residence information in the register data. ²Registered partnerships included. ³Other type of family includes persons without partners (adults and children), lone mothers and fathers who live with their children, cohabiting persons without children, and cohabiting persons with stepchildren only.

¹The average age is average of those actually marrying in the period, thus being influenced by cohort size variations. ²Never married.

³Divorced and widowed. ⁴On the condition that a cohort unmarried persons at age 15 years will get married according to the age-specific marriage rates the year observed, and that deaths do not occur. The percentage is not influenced by cohort size variations. In 1996 a new model for calculating per cent unmarried at age 50 was put into use. Using the model, new figures for 1991-1995 have been calculated. The implication of the adjustment is that the percentage is not directly comparable to those of preceding years. ⁵Corrected figure.

¹The table shows results from one of several variants (variant MMMM), in which there is assumed a fertility rate of 1.80 children per woman per year from 2005, increase in male and female life expectancy of 4-5 years within 2050, net in-migration at the level of 13 000 per year from 2004 and internal migration as observed in 1990-2001.

¹The statistics record the number of bounties paid for predators killed. After the species were protected, all registered mortality is recorded.

²For 1933-1940 there were an additional 40 wolves and 56 eagles felled. After 1961 bears felled without bounty are also included.³ Eagles were protected starting in 1969, wolves starting in 1972 and bears starting in 1974. Wolverines starting in South of Norway in 1975 and in the whole of Norway from 1981, until license hunting was introduced in 1993. Lynx was protected in Southern Norway from 1992, until quota hunting was introduced in 1994.

¹One driving licence may include several classes. ²Trailers with total weight of 750 kg or more. ³In 1998 there was an increase for some of the driving licence classes, due to what previously was called the stamp arrangement. That means that many driving licence owners had the privilege to drive light motor cycle, motor vehicle up to 7 500 kg and mini buses, and this right was only indicated by a stamp on the driving licence (stamp arrangement). It was, however, not marked by any letter combination on the driving licence (or in the driving license register). Previously, the statistics did not comprise those who had these rights (the stamp). The figures are not comparable with previous figures. ⁴The decline is mainly due to many licence holders not renewing their driving licenses to include these categories before the end of 2001. ⁵From 2004 the characters T, M and S are separate characters in the driving licence.

¹Refers to transfers that comprise transfer of title to land and transfers of building sections registered as individual property. Dwelling property refers to detached houses, semi-detached houses, row-houses, flats in multi-dwelling houses etc. Percentage of different dwelling types varies over time. Because of this, the figures do not describe the price trend for a specific type of dwelling. A few transfers may include more than one dwelling unit. Dwelling properties without purchase price reported are not included.
