Preface

The Statistical Yearbook of Norway 2011 contains statistics on Norway and key figures for the Nordic countries and other countries. New in this year's edition is a table depicting the average mileage of vehicles and a map showing vacant agricultural and forestry properties.

The yearbook presents the main trends in official statistics in most areas of society. The list of tables and figures and an index at the back of the book provide easy access to relevant information. In addition, source information and Internet addresses below the tables make the yearbook a good starting point for those who are looking for more detailed statistics.

The statistics are based on data gathered in statistical surveys and from administrative data, which, in cooperation with other public institutions, have been made available for statistical purposes. Some tables have been prepared in their entirety by other public institutions, while tables from other countries have been selected from international statistics. The statistics follow approved principles, standards and classifications that are in line with international recommendations and guidelines. A Norwegian edition of the yearbook is also available. Both editions are available in electronic format on ssb.no.

The Statistical Yearbook of Norway 2011 has been edited by Ms Ingrid Modig. Ms Siri Boquist is responsible for the design. In addition, more than a hundred people from within and outside Statistics Norway have made important contributions to this edition.

Geographical survey

I. Geography in text and figures

The Kingdom of Norway consists of the mainland, the archipelago of Svalbard and the island Jan Mayen.

The mainland consists of continental Norway and every island, islet and rock within the Norwegian baseline.

Svalbard consists of Bjørnøya, Spitsbergen, Nordaustlandet, Barentsøya, Edgeøya, Kong Karls Land, Hopen, Prins Karls Forland, Kvitøya and every island, islet and rock situated between 74° and 81° N. latitude and between 10° and 35° E. longitude. By an international treaty (the Svalbard treaty), signed on 9 February 1920, Norway's sovereignty over the archipelago was recognised. On 17 July 1925 the archipelago was officially incorporated into the Kingdom of Norway.

Jan Mayen is an island situated in the northern Atlantic. On 8 May 1929 it was placed under Norwegian sovereignty, and became by law of 27 February 1930 a part of the Kingdom of Norway.

The Antarctic islands Bouvetøya, Peter I Øy and Dronning Maud Land (20° W. and 45° E.) on the Antarctic continent are dependencies. They were placed under Norwegian sovereignty by law of 27 February 1930, parliamentary resolution of 23 April 1931 and royal announcement of 14 January 1939, respectively. The dependencies are not part of the Kingdom of Norway.

¹New figures 2006 from the Norwegian Mapping Authority for "In the sea". The Norwegian Polar Research Institute has calculated the area figures for Svalbard, Jan Mayen and dependencies. The Norwegian Water Resources and Energy Directorate has calculated the area of lakes. ²The sea territory within the territorial limit. ³The sea territory within the baseline. ⁴The area between the baseline and 200 nautical miles (one nautical mile = 1 852 metres) is divided between the sea territory and the economic zone. ⁵The sea territory between the baseline and the territorial limit is 12 nautical miles. ⁶Norway's economic zone consists of the maritime zone between the territorial limit of 12 nautical miles and 200 nautical miles, but is limited to the border with neighbouring countries where the border line is further in than 200 nautical miles. ⁷New figures for the fisheries protection zone around Svalbard will be provided when the territorial limit between Svalbard/Greenland has been set out in an agreement between the parties. ⁸The sea territory between the territorial limit and the outer limit of the fisheries zone. ⁹Area delineated by the 200 nautical miles zone between Norway, Svalbard and Russia. ¹⁰Areas for regulated lakes are referring to highest regulated water level. The Norwegian Mapping and Cadastre Authority is currently calculating new area figures for islands and lakes. ¹¹Artificial lake. Reservoir for the Ulla-Førre hydroelectric power plants. ¹²Also 520 km in Sweden (Klarälven - Göta älv), making it the longest river in the Nordic countries. ¹³360 kilometers including parts in Russia. ¹⁴Including glacier at summit.

II. County and municipality divisions in Norway

The map shows county and municipality divisions in Norway as of 1 January 2011. Norway has a total of 19 counties and 430 municipalities. The name and location of county administrative centres are shown on the map. In addition, the map contains territorial waters, i.e. all waters inside the territorial border. The territorial waters are divided into internal waters, the area between the coastline and the baseline, and the area between the baseline and the territorial border.

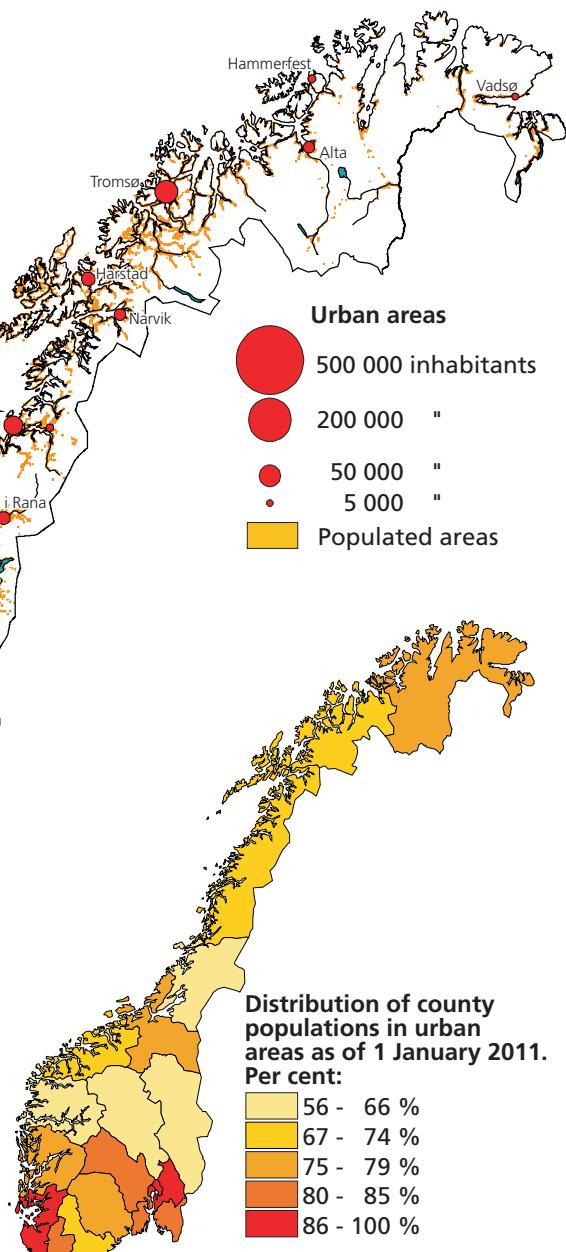

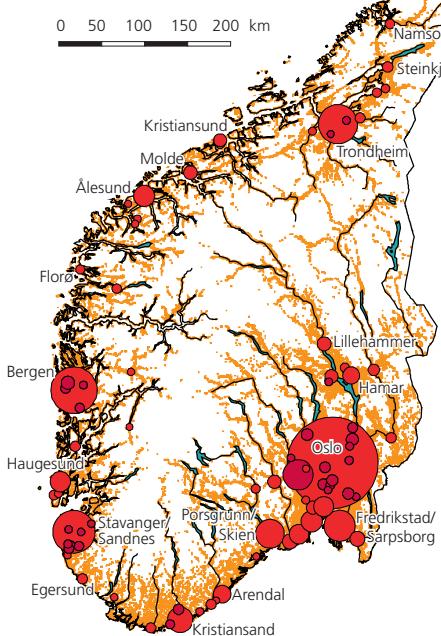

III. Settlement

The map shows populated areas and the number of inhabitants in major urban areas as of 1 January 2011. Urban areas with 5 000 or more inhabitants are shown with circles on the map. Oslo, the largest urban area, has 906 681 inhabitants as of 1 January 2011.

An urban area is an agglomeration of houses having at least 200 residents and where the distance between the houses does not as a rule exceed 50 metres, and is limited independent of administrative boundaries.

79 per cent of the population in Norway live in municipalities with a coast line, and half of those who do not live on the coast, live within a 100 km radius of Oslo. Norway is one of the most sparsely populated countries in Europe, with 16 persons per km².

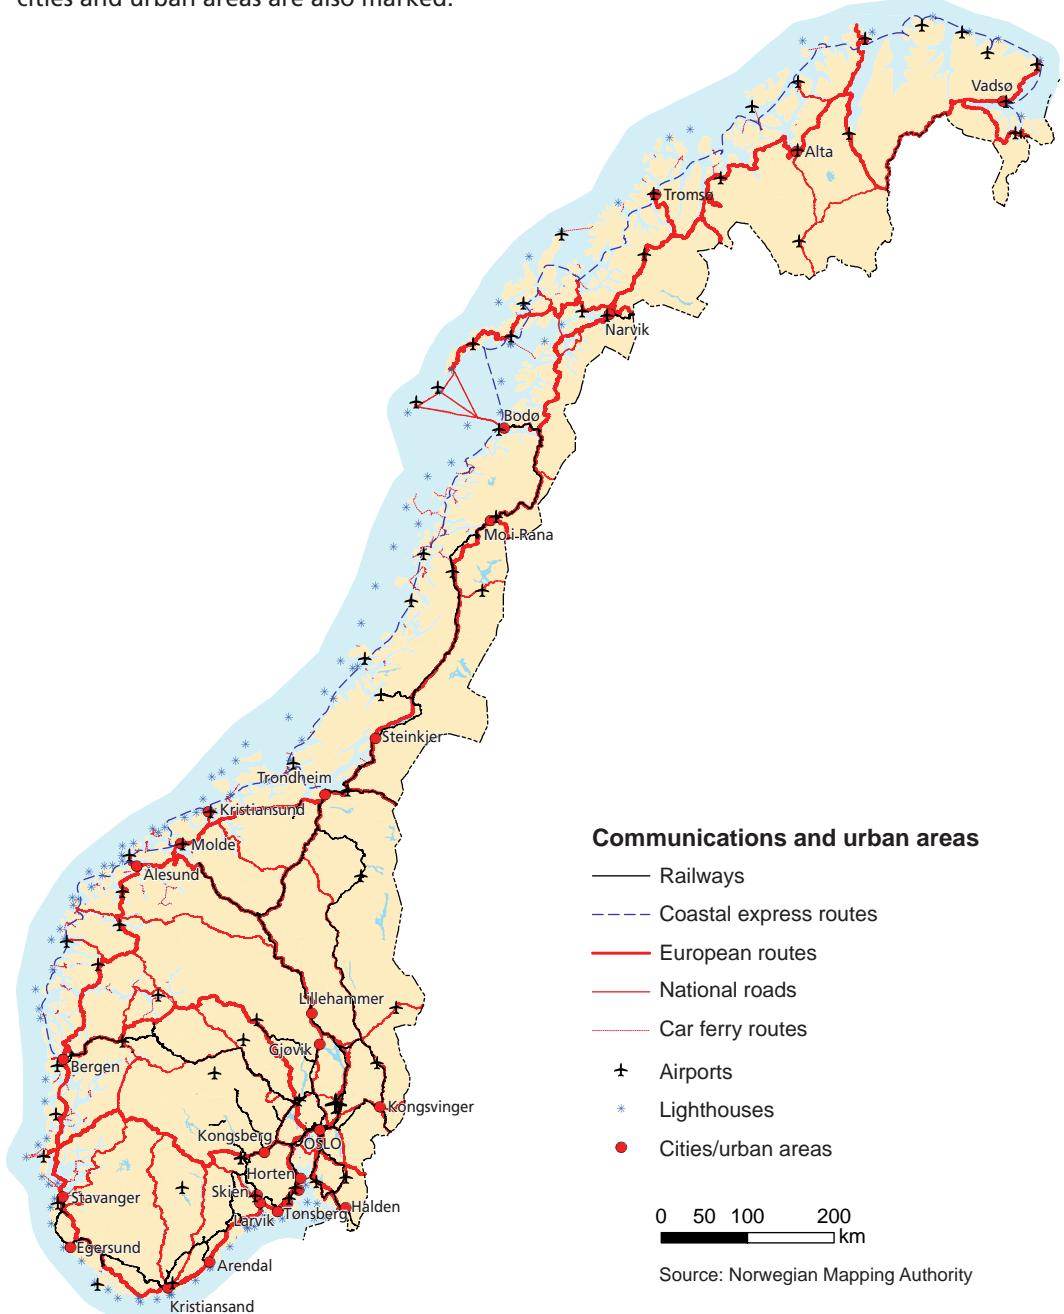

The smallest map shows the percentage of county inhabitants living in urban areas. In 1865, around 20 per cent of Norway's population lived in urban areas. By 2011, the figure has reached 79.5 per cent.

IV. Communications

The map shows roads, car ferry routes, railways, airports, Coastal express routes and lighthouses. Some major cities and urban areas are also marked.

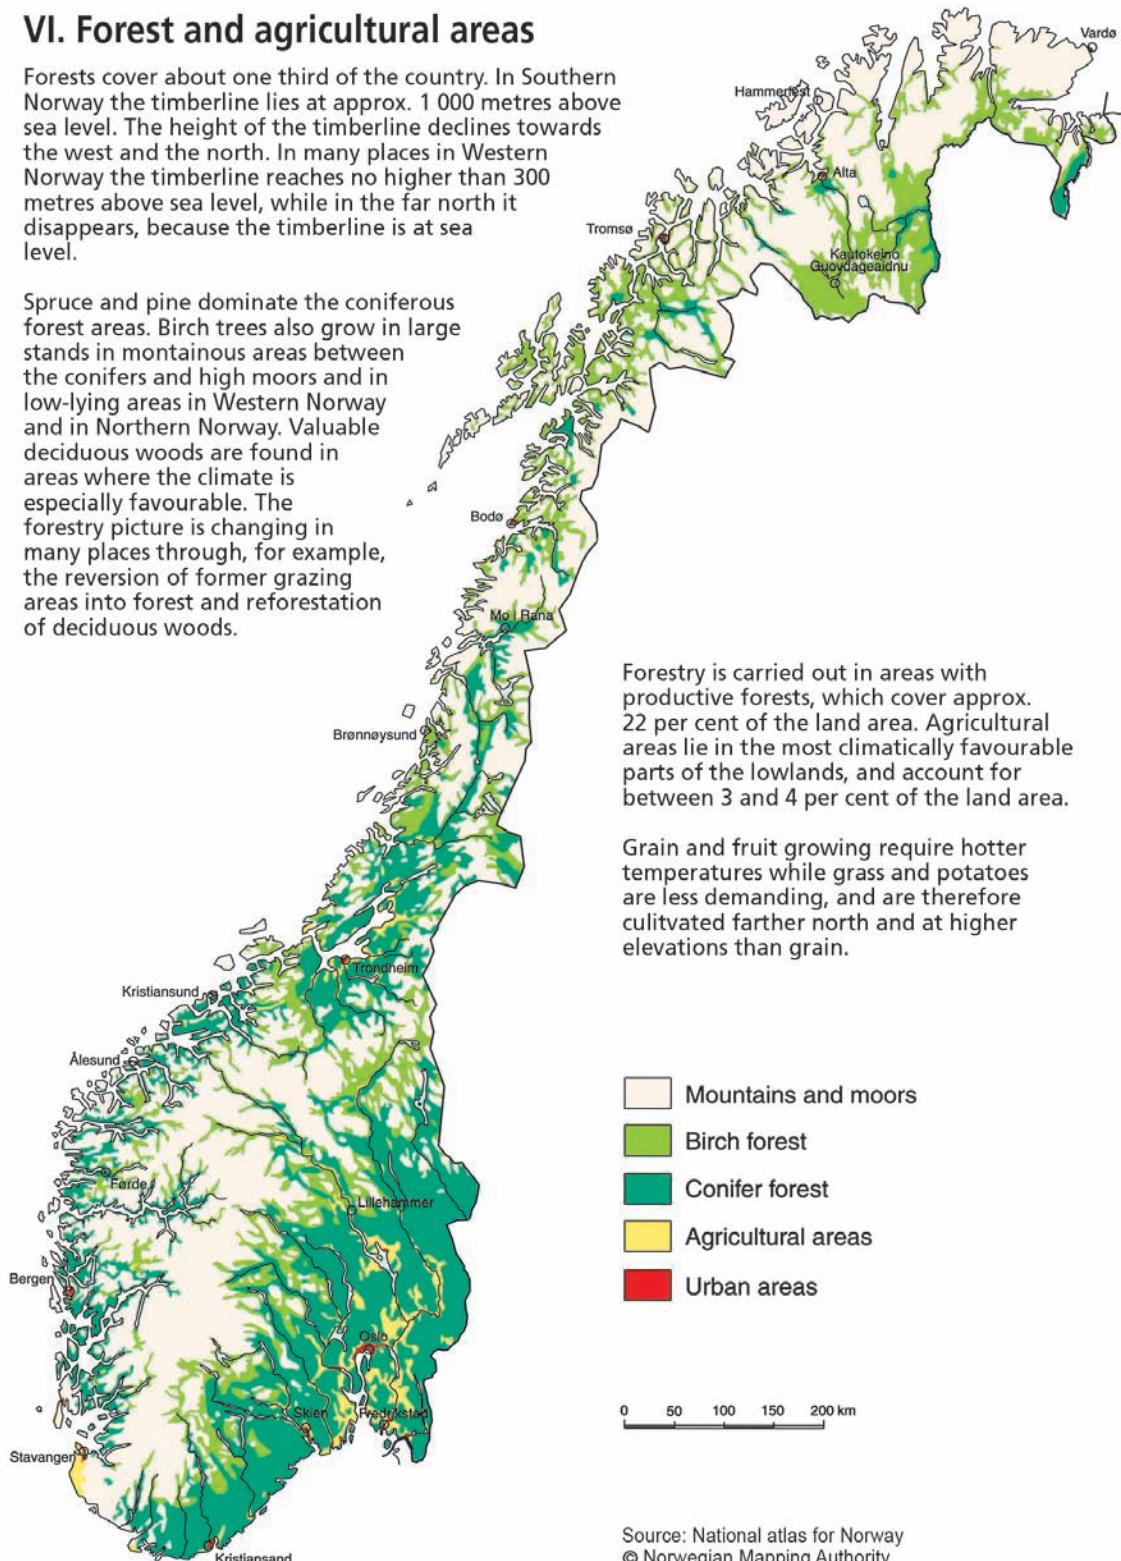

VI. Forest and agricultural areas

Forests cover about one third of the country. In Southern Norway the timberline lies at approx. 1 000 metres above sea level. The height of the timberline declines towards the west and the north. In many places in Western Norway the timberline reaches no higher than 300 metres above sea level, while in the far north it disappears, because the timberline is at sea level.

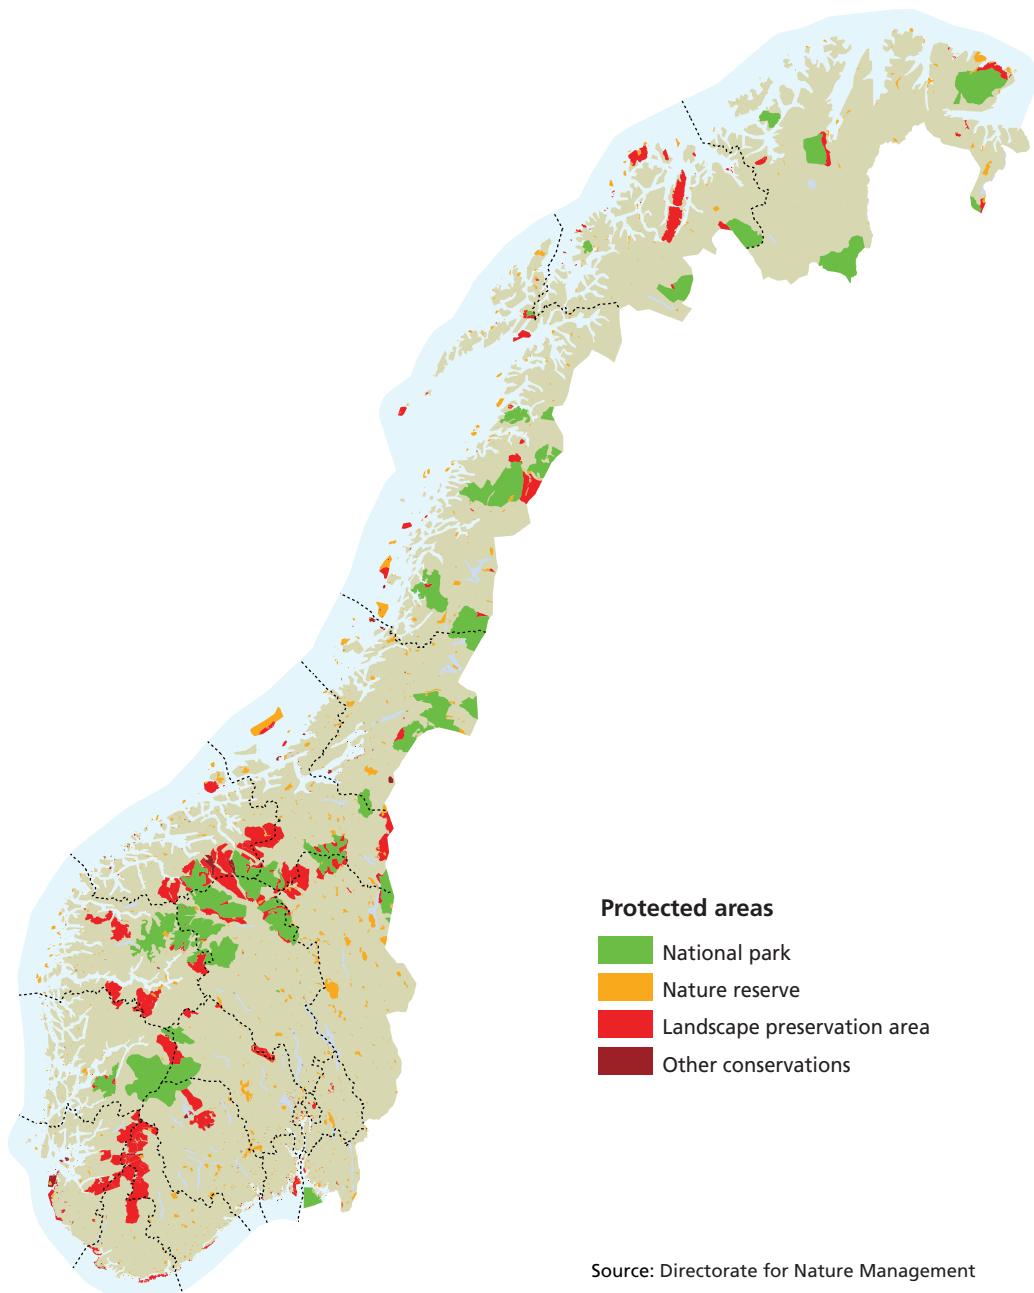

Spruce and pine dominate the coniferous forest areas. Birch trees also grow in large stands in mountainous areas between the conifers and high moors and in low-lying areas in Western Norway and in Northern Norway. Valuable deciduous woods are found in areas where the climate is especially favourable. The forestry picture is changing in many places through, for example, the reversion of former grazing areas into forest and reforestation of deciduous woods.

¹From 31 December 2006 and onwards the statistics also include natural protected areas by The Act relating to wildlife and wildlife habitats and The Act relating to Salmonids and Fresh-Water Fish etc. ²From 31 December 2003 onwards, the area figures are calculated based on digital overlay analysis, a higher accuracy are thus obtained. ³This category included areas protected because of plants, birds, and animals. It has been expanded with protected areas according to The Act relating to wildlife and wildlife habitats from 31 December 2007 onwards.

⁴Protected according to the Svalbard Environmental Protection Act. These areas are not included in the totals for protected areas. ⁵Nature Diversity Act. 19 of June 2009, management and protection of the natural environments diversity. The Act provides rules for the sustainable use and protection of the natural environment. This means new tools for safeguarding nature, not only within, but also outside protected areas. The Nature Diversity Act replaces the earlier law of Nature Conservation Act, parts of Wildlife Act and protections by the Act relating to Salmonids and Freshwater Fish.

¹Mean annual energy production. The figures are not directly comparable because of reference to different time periods for inflow to the reservoirs; from 2000, the period 1970-1999 is used. ²Plans for non-operational hydro power are reconsidered regularly, and consequently the amount of potential hydro power will vary from year to year. ³Includes "License granted" for the years before 1993. ⁴The large rise in 2004 is explained by the inclusion of small power plants (capacity 50-10 000 kW). ⁵The changes from last year in the categories "Protected" and "Remaining" are due to expansion of new protected water resources in the Protection Plan.

¹The waste amount from ships (above 100 gross register tons) and big constructions, as oil platforms, are counted as the average for the whole period from 1995 to 2009. Impregnated wood is considered as wood waste until 2002 and hazardous waste from 2003. ²Includes scrapped cars and paper waste incinerated at home. ³New estimations show 2.3 million tonnes of non-hazardous waste from manufacturing in 2008 (http://www.ssb.no/avfind_en/), and not 3.4 million tonnes as in the waste accounts. The time series is currently being revised, and revised figures on waste from manufacturing will be published in the next release of the waste accounts. ⁴Anaerobic biological treatment is included in "Composting". Exported waste is categorised according to the treatment or disposal it undergoes in the destination country, insofar this treatment or disposal method is known. Exported waste for which the treatment or disposal method is unknown, is categorised as unknown or unspecified. Imported waste is not covered by the statistics.

¹Agglomerations with at least 200 inhabitants and where the distance between the houses as a rule does not exceed 50 metres. Before 1845 cities ("kjøpsteder" and "ladesteder") are defined as densely populated areas, so were agglomerations outside cities in the period 1845-1950.

²Does not include Svalbard and Jan Mayen. ³The population figure is probably about 15 000 too low. ⁴Figures from revision of the census in 1980. ⁵Does not include Holt-Dypvåg, 4 583 persons. ⁶The population figure is probably about 20 000 too low. ⁷Present population. ⁸Including 15 952 persons with no information on densely/sparingly populated areas in 1980, 25 005 persons in 1990 and 43 826 persons in 2001.

⁹New method for delimitation of urban settlements may influence the comparability with figures prior to 1999.

¹Urban settlement: An agglomeration with at least 200 residents and where the distance between houses as a rule does not exceed 50 metres.

An urban settlement is delimited independent of administrative boundaries. ²In municipalities where more than 50 per cent of the population live in urban settlements, persons with no registration on urban/rural residence are considered as inhabitants of the largest urban settlement in the municipality. ³With assignment of codes as in the 1970 census, the population figures of the major urban settlements would be: Oslo

649 031, Bergen 181 919, Trondheim 128 159 and Stavanger 91 129. ⁴New method for delimitation that may influence the comparability with previous figures. ⁵From 1 January 1999 continuous urban settlements are merged to one settlement. ⁶The population figure is probably about 4 000 too low. ⁷The urban settlement Ålesund/Spjelkavik was merged with Langevåg to form Ålesund urban settlement from 1 January 2002. ⁸Urban settlement Moss was by 1 January 2007 unified with Son/Store Brevik to form Moss urban settlement.

¹Capital cities are listed first, then some of the largest cities in the country. Cities that do not have suburbs are usually listed with the population in the administrative areas. The population figures for a large number of cities in less developed countries are uncertain.²Includes Oslo, Asker, Bærum, Lørenskog, Nesodden, Nittedal, Oppgård, Rælingen, Skedsmo and Ski.³The capital city region including Espoo, Kauniainen and Vantaa.⁴Pretoria is the administrative unit, Cape Town is the legislative capital city.⁵The "standard metropolitan statistical area" is used for cities with suburbs.⁶The Greek part.⁷The Turkish part.

¹A child is defined as any person with no partner and no child who has de jure place of usual residence in the dwelling/private household of at least one of the parents. A child is either biological or adopted. A foster child is not considered a child. ²Siblings living at home comprises biological, half, and stepsiblings. Biological siblings are offsprings having both parents in common. Half siblings are offsprings having only one parent in common. Stepsiblings are offsprings having no parents in common, but one of their parents are living together as married or cohabiting couples. Persons living in the same private household as their parents are regarded as living at home. A person does not have to be considered a child in the household to be regarded as a sibling.

¹According to municipal boundaries in the relevant year. ²According to the boundaries for the counties from 1 January 1972. Oslo and Akershus are here considered as one county. ³The figures for 1951-1957 refer to unchecked data from local population registers (and are therefore less reliable than figures for later years). ⁴Refers to 1957-1960.

¹Some asylum seekers may already be resident in Norway with another type of residence permit. ²Some figures may differ from figures published earlier because of revised figures from the Norwegian Directorate of Immigration. ³For the years 1996-2006 this figure also includes citizens from the former Serbia and Montenegro. For 2007 it includes Kosovo.

¹The average age is average of those actually marrying in the period, thus being influenced by cohort size variations. Average age is only for marriages between persons with different sex. ²Never married. ³Divorced and widowed. ⁴On the condition that a cohort unmarried persons at age 15 years will get married according to the age-specific marriage rates in the year observed, and that deaths do not occur. The percentage is not influenced by cohort size variations. In 1996 a new model for calculating per cent unmarried at age 50 was put into use. Using the model, new figures for 1991-1995 have been calculated. The implication of the adjustment is that the percentage is not directly comparable to those of preceding years. Average age is only for marriages between persons with different sex. ⁵Corrected figure.

¹The table shows results from one of several variants (variant MMMM), in which there is assumed a total fertility rate decreasing from 1.95 to 1.93 children per woman per year, increase in male and female life expectancy of 7 and 6 years by 2060, immigration first increasing to 79 000 per year within 2014, then decreasing to a level of 40 000 per year from 2040. Internal migration is as observed in 2006-2010.

¹Actual individual consumption (AIC) is the sum of Household final consumption expenditure, Final consumption expenditure of non-profit institutions serving households and Individual consumption expenditure of government. Since the scope of particularly public sector services differs among countries, AIC is often considered more suitable in international comparisons than Household final consumption expenditure.

¹The aggregate for crude oil and natural gas has been changed from the definition used in publications made in 2003 and earlier. From publications made in 2004 and so on, the aggregate now covers all products produced in the oil and gas industry which has an export value of at least 50 per cent of the total sales value.

The statistics record the number of bounties paid for predators killed. After the species were protected, all registered deaths are recorded.

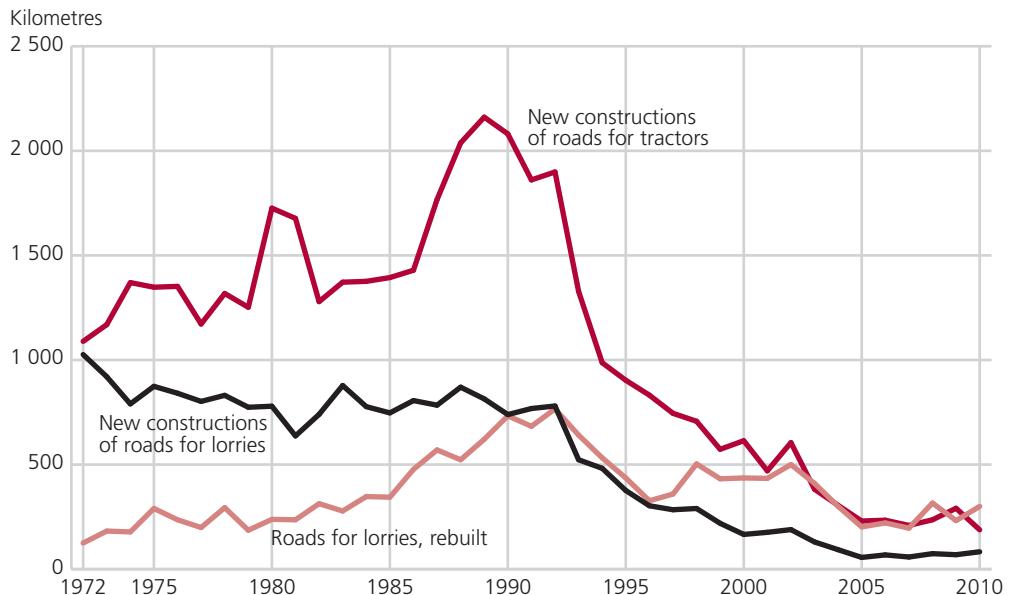

²In the period 1933-1940, an additional 40 wolves and 56 eagles were felled. After 1961 bears felled without bounty are also included.

³Eagles were protected in 1969, wolves in 1972 and bears in 1974. Wolverines were protected in southern Norway in 1975 and in the whole of Norway in 1981, until license hunting was introduced in 1993. Lynx was protected in southern Norway in 1992, until quota hunting was introduced in 1994.

¹Corrected figures. A number of enterprises and local KAU's have been reclassified from manufacturing to services relating to the extraction of oil and gas. Changes are applicable dating back to 2007 and entail a break in the series. Ancillary establishments are included in the characteristics "establishments" from 2007 and onwards. See our web page http://www.ssb.no/sti_en/ for more information.

¹One driving licence may include several classes. ²Trailers with total weight of 750 kg or more. ³In 1998 there was an increase for some of the driving licence classes, is due to what previously was called the stamp arrangement. That means that many driving licence owners had the privilege to drive light motor cycle, motor vehicle up to 7 500 kg and mini buses, and this right was only indicated by a stamp on the driving licence (stamp arrangement). It was, however, not marked by any letter combination on the driving licence (or in the driving license register). Previously, the statistics did not comprise those who had these rights (the stamp). The figures are not comparable with previous figures.

⁴The decline is mainly due to many licence holders not renewing their driving licenses to include these categories before the end of 2001.

⁵From 2004 the characters T, M and S are separate characters in the driving licence.

¹From 1975 interest includes commission. Before 1979 the source is Statistics Norway's Historical Statistics. For the period 1979 to 1987, the interest rates on loans (including non-accrual loans) and on deposits overall in banks was calculated by combining the information from the annual interest rate statistics, which provide average interest rates at the end of each year, with data from the quarterly interest rate statistics, which provided the highest and lowest rates on new loans. As from 1987 until 2006, the source is Norges Bank's quarterly interest rate statistics. From 1 January 2007 the quarterly interest rate statistics are produced by Statistics Norway. ²An increase in prices is equal to percentage change in the Consumer Price Index (CPI) from last year. ³Real interest rate is defined as interest rate on loans minus the increase in prices.

⁴Before 1986 quarterly average.

Units of measure of ships

RT Registered tonnage is a common measure of capacity or volume for ships.
 1 register ton = 2.83 m³

GT Gross registered tonnes. The gross registered tonnage of a ship indicated the volume of the whole ship including superstructure, deck and deck house.

NT Net registered tonnes. The net registered tonnage primarily indicates the size of cargo space.

Topics

The topic classification makes it easier to locate relevant statistics within a subject of interest. The chapters of this yearbook are consistent with the highest level of the classification, while the tables are grouped at lower levels as well.

Gunnar S. Gundersen (1921-1983) was one of the most prominent figures in non-figurative art in Norway in the 20th century. He used surface bound and constrained geometric shaped elements, as well as more spacial geometric shaped elements. In oil and acrylic, the colour surfaces were meticulously detailed and clear; a visual expression that was to emerge as being well suited for silkscreen printing. A hallmark of Gundersen's visual expression was his detailed analysis of individual forms and colours, where the emphasis was on a rhythmic grouping of the elements. He said himself that his starting point was his first perception when he was going to paint a picture, normally a rhythmic fragment of something he had considered. Based on this fragment, he would detail an organically linked series of visual perceptions to form a living and harmonic unit. He painted simply and purely in a direct language that expressed a logical, clear relationship with art.
