## 1. INNLEDNING

Statistisk Sentralbyrå har bygd opp en kretsdatabank med data fra perioden rundt 1980. Kretsdatabanken består i første omgang av data fra folke- og boligtellingsen 1980, landbrukstellingen 1979 og normative arbeidsreiseomland til utvalgte tettsteder/sentra. Arbeidet med å bygge opp denne siste er gjort med støtte fra Miljøverndepartementet.

Dette notatet er en tabell- og figurpublikasjon og en videreføring av Interne notater nr. 83/21. Normativt arbeidsreiseomland til utvalgte tettsteder og sentra, Del I. Del I inneholder en beskrivelse og vurdering av metode og gjennomføring av prosjektet. Del II vil bli gitt ut med et hefte for hvert fylke, med unntak av Akershus og Oslo som er slått sammen til ett hefte.

Med normativt arbeidsreiseomland menes maksimal akseptabel daglig arbeidsreiseavstand. I denne undersøkelsen er maksimal arbeidsreiseavstand satt til 45 min. Ved valg av transportmiddel er valgt raskeste transportmiddel forutsatt tilstrekkelig hyppighet og ikke urimelige høye kostnader. Vanligvis er derfor personbil nyttet ved beregningene. Hastighetene for personbil på riksvegene er fastlagt av vegkontorene i fylkene. Der en må bruke offentlige transportmidler er Rutebok for Norge nyttet. Det er lagt inn hastighetsbegrensninger for vegstrekkninger som passerer tettsteder. Normalt vil det ta noe tid å komme til og fra transportmiddelet en nyter. Denne tiden er beregnet skjønnsmessig. Utvalget av tettsteder/sentra er foretatt på grunnlag av de tettsteder/sentra som var nyttet i Fossan<sup>1)</sup> sin undersøkelse. Utvalget er utvidet noe etter samråd med plan- og utbyggingsavdelingen i fylkeskommunen. Arbeidsreiseomlandene er tegnet inn på kart i målestokk 1:250 000 (Bosettingskartene) og digitalisert fra samme kartverk.

En nærmere beskrivelse av framgangsmåten er gjort i Interne notater 83/21.

## 2. SPESIELLE MERKNADER FOR AKERSHUS OG OSLO

I tillegg til de tettsteder og sentra som er nyttet i Bjørn Fossan sine undersøkelser er Siggerud, Langhus, To-Grenda, Fagerstrand, Rånåsfoss, Flateby og Slattum (Skytta) tatt med. Fagerstrand er tatt med fordi det er det andre vekstsenteret i Nesodden. Langhus er en viktig arbeidsplasskonsentrasjon i Ski. Rånåsfoss har en betydelig arbeidsplass og Skytta ved Slattum er et industriområde i utbygging. De andre tettstedene har over 1 000 innbyggere.

Vanligvis er det ingen forskjell i gjennomsnittshastigheten fastsatt av de ulike vegkontorene for veger som krysser fylkesgrensa. På grensa mellom Akershus og Østfold, og mellom Akershus og Hedmark er det imidlertid noen forskjeller. Noen av forskjellene skyldes vesentlige forskjeller i vegstandard. Vegene det gjelder er E18 hvor hastigheten er satt til 80 km i Akershus og 60 i Østfold, og riksvegene 21, 22 og 125 hvor hastighetene er satt til henholdsvis 70 og 60 km. På riksveg 21 mellom Akershus og Hedmark er hastighetene satt til 80 km i Akershus og 60 km i Hedmark.

Omlandet til Bjørkelangen er noe videre enn kartet viser, da omlandet går noe inn i Sverige langs riksveg 201.

Utgangspunktet for beregningene er satt til sentrum i tettstedet/senteret. Det viser seg imidlertid at for en del tettsteder/sentre er sentrum plassert noe annerledes i Fossan sin undersøkelse enn den som er gjort i denne. Råholt sentrum er nyttet som utgangspunkt for beregningene i 1980 og ikke Eidsvoll verk som var nyttet i Fossan sin undersøkelse. Utgangspunktet for beregningen er flyttet noe sydover i forhold til den tidligere undersøkelsen. Sentrum for Gardermoen er flyttet noe nord-vestover. Enebakk er hos Fossan plassert ved Enebakk kirke, ca. 10 min reisetid fra sentrum, Ytre Enebakk. Maura svarer til Rud hos Fossan. Aursmoen svarer på samme måte til Aurskog.

Ved sammenligninger med kartet fra Fossan sin undersøkelse viser det seg at en kommer til dels mye lengre på de fleste vegene ut fra Skedsmokorset. Vi har ikke kontrollert om dette skyldes endret eller feil beregningsmåte i forhold til den tidligere undersøkelsen.

En del av sentrene er undersentre til større tettsteder. Dette gjelder spesielt i Akershus hvor svært mange av sentrene ligger i Oslo tettsted. Langhus, Kolbotn, Sandvika, Asker, Strømmen og Lillestrøm ligger alle innenfor tettstedsgrensene til Oslo. Dal er regnet med til tettstedet Råholt.

1) Bjørn Fossan: Senterstrukturen i Norge, Miljøverndepartementet 1975.
