P R E F A C E

The present publication, International Whaling Statistics No. LII, embraces the results of the Antarctic whaling during the season 1962-63.

The statistical data in this publication are based on the reports sent in to the Bureau of International Whaling Statistics, Sandefjord.

Oslo, December 1963.

INTRODUCTION

Regulative provisions.

At the meeting of the International Whaling Commission in 1960 it was decided to suspend for the seasons 1960–61 and 1961–62 the provisions in the Schedule concerning a maximum catch of 15 000 blue-whale units for the pelagic expeditions in the Antarctic. However, at the request of the International Whaling Commission, the countries engaged in pelagic whaling in the Antarctic adopted a voluntary limitation, each single country stipulating a maximum catch for its expeditions. The catch during these two seasons, when the maximum catch was suspended, amounted to 16,434 and 15,253 blue-whale units, respectively.

After the expiry of the 1961–62 season the provision concerning a maximum catch of 15,000 blue-whale units was automatically reintroduced and remains in force until the Commission stipulates some other maximum catch.

In 1958 negotiations were initiated between Japan, Norway, U.S.S.R., United Kingdom and the Netherlands concerning an agreement for apportionment of the maximum catch, which is at any time in force according to decision of the Whaling Commission. In 1962 the said countries came to an understanding on such an agreement, the so-called quota agreement. The quota agreement has now been ratified by the governments of the respective countries and holds good until and including the season 1965–66.

In accordance with the quota agreement the transfer of quotas from one country to another is permitted only in connection with the sale of factory ships. One Norwegian and one British floating factory were later sold to Japan, and an adjustment of the quotas of the said countries was effected at the same time. As a result of these adjustments the quota distribution for 1962–63 was as follows:

Japan	41 per cent
Norway	28 per cent
U.S.S.R.	20 per cent
The Netherlands	6 per cent
United Kingdom	5 per cent
<hr/>	
Total	100 per cent

The Netherlands should on certain conditions have an additional quota of up to 70 blue-whale units per season. If the stipulated conditions were fulfilled, so that the Netherlands might claim this additional quota, it should be ceded by Norway, Japan and United Kingdom according to detailed rules.

The maximum catch for the season 1962–63 was, as already stated, 15,000 blue-whale units, and pursuant to the aforesaid apportionment figures, the quotas of the individual countries were as follows:

	Season 1962–63 Blue-whale units
Japan	6,150
Norway	4,200
U.S.S.R.	3,000
The Netherlands.....	900
United Kingdom	750

With the exception of reintroduction of the provision for a maximum catch of 15,000 blue-whale units and the aforesaid quota agreement the other regulative provisions in the season 1962–63 were mainly the same as in the previous season, namely:

1. The open season for the taking of fin- and sei-whales was from December 12th.
2. The open season for the taking of blue-whales was from February 1st. The Commission resolved in 1960 that the opening date for taking of blue-whales should be February 14th. However, all the countries engaged in pelagic whaling in the Antarctic filed protest against this resolution, which did not therefore become effective.
3. The season was open to April 7th inclusive for the taking of blue-, fin- and sei-whales.
4. The open season for humpback whales was until and including the season 1959–60 January 20th, 21st, 22nd and 23rd. At the meeting of the whaling Commission in 1960 it was resolved that the whaling period for humpback whales should be as follows:

Area III, 0° — 70° east, in the period January 20th, 21st, 22nd and 23rd.

Area IV, 70° east — 130° east, totally protected until and including the season 1962–63.

Area V, 130° east— 170° west, in the period January 20th, 21st and 22nd.

Area VI, 170° west — 120° west, in the period January 20th, 21st, 22nd and 23rd.

Area I, 120° west — 60° west, in the period January 20th, 21st, 22nd and 23rd.

Protests were, however, filed against the changes by all the countries engaged in pelagic whaling in the Antarctic, and the catching period for humpback whales, which was in force in 1959–60, applied also in 1960–61 and 1961–62. However, all the protests have now been withdrawn, and the resolution of 1960 has consequently been established.

5. The taking of humpback whales was prohibited between 0° and 60° West Longitude (Area II).
6. It was forbidden to take:

Blue-whales under 70 feet	
Fin-whales »	57 »
Sei-whales »	40 »
Humpbacks »	35 »

Further it was forbidden to kill grey-whales, right-whales, and female whales accompanied by a calf. The Convention also contained a provision enjoining full utilization of whales.

7. The open season for sperm-whales was 8 months and the minimum size limit was 38 feet.

Whaling period.

As in the previous season the catch of fin- and sei-whales in the season 1962–63 commenced on December 12th and terminated on April 7th.

The whaling period and number of catching days for the pelagic baleen whaling operations in the seasons 1932–33, 1934–35, 1936–37 and as from 1945–46 will be seen from the survey below:

Season	Whaling period	Catching days
1932–33.....	October 20th–April 14th	177
1934–35.....	December 1st–March 31st	121
1936–37.....	December 8th–March 7th	90
1945–46.....	November 24th–March 24th	121
1946–47.....	December 8th–April 7th	121
1947–48.....	December 8th–March 31st	115
1948–49.....	December 15th–March 26th	102
1949–50.....	December 22nd–March 15th	84
1950–51.....	December 22nd–March 9th	78
1951–52.....	January 2nd–March 5th	64
1952–53.....	January 2nd–March 16th	74
1953–54.....	January 2nd–March 18th	76
1954–55.....	January 7th–March 19th	72
1955–56.....	January 7th–March 4th	58
1956–57.....	January 7th–March 16th	69
1957–58.....	January 7th–March 16th	69
1958–59.....	January 7th–March 16th	69

Season	Whaling period	Catching days
1959–60.....	December 28th–April 7th	102
1960–61.....	December 28th–April 7th	101
1961–62.....	December 12th–April 7th	117
1962–63.....	December 12th–April 7th	117

In the four last seasons some of the expeditions closed their operations on an earlier date. The average catching period was therefore: In 1959–60 99 days, in 1960–61 96 days, in 1961–62 115 days and in 1962–63 111 days.

The whaling period for blue-whales was until and including the season 1952–53 the same as the period for fin-whales. From and including the season 1953–54 the whaling period and the number of catching days for blue-whales have been as follows:—

Season	Whaling period	Catching days
1953–54	January 16th–March 18th	62
1954–55	January 21st–March 19th	58
1955–56	February 1st–March 4th	33
1956–57	February 1st–March 16th	44
1957–58	February 1st–March 16th	44
1958–59	February 1st–March 16th	44
1959–60	February 1st–April 7th	67
1960–61	February 1st–April 7th	66
1961–62	February 1st–April 7th	66
1962–63	February 1st–April 7th	66

Weekly catch in blue-whale units.

The weekly catch of the last three seasons, based on the telegraphic reports from the whaling grounds, are recorded in table *a*, page 11. When considering the heavy decline in the catch, converted into blue-whale units, towards the end of these seasons, it must be taken into account that some of the expeditions terminated their operations during the period from March 15th to April 1st. As will appear from the table, the highest weekly catch during the last season (from January 27th to February 2nd) was 998 blue-whale units, and the lowest (from December 23rd to December 29th) with all expeditions in operation, was 523 blue-whale units. The corresponding figures for the season 1961–62 were 1,406 units (from March 18th to March 24th) and 541 units (December 24th—December 30th).

Whaling matériel.

During the Antarctic season 1962–63 17 floating factories with a total of 201 catchers were in operation. This is 4 floating factories and 60 catchers fewer than in the season 1961–62. Two Norwegian factory ships, which, with the exception of the war seasons, have carried on whaling in almost all

1962—63....	17	354,581	20,858	201	141,327	703	2,957

¹⁾ Excl. fl.f. "Baikal Maru" with 5 catchers. Catch of sperm-whales only.

seasons since 1928–29, were in 1962 withdrawn from the operations and sold for breaking up. Another Norwegian factory ship was inactive in the season 1962–63. Finally a British factory ship was sold to Japan for delivery after the season 1961–62. This ship was not used in the Antarctic season 1962–63. With these exceptions the same pelagic expeditions participated in the operations in the season 1962–63 as in 1961–62. One Norwegian factory ship suffered extensive damage at sea and had to cease operations on January 29th 1963.

The number of floating factories and catchers operated by the respective countries during the last three seasons were as follows:

Countries	Season 1960–61		Season 1961–62		Season 1962–63	
	Floating factories	Catchers	Floating factories	Catchers	Floating factories	Catchers
Norway	8	81	7	71	4	32
United Kingdom	2	22	2	22	1	9
Netherlands	1	14	1	15	1	11
Japan	7	83	7	86	7	79
U. S. S. R.	3	52	4	67	4	70
Total	21	252	21	261	17	201

No whaling was carried on from land stations on South Georgia in the season 1962–63. Whaling from South Georgia has otherwise been carried on ever since the Antarctic whaling commenced in 1904–05 and until 1961–62.

Table b, page 11, gives the number of floating factories and catchers engaged in pelagic whaling since the season 1945–46. The table also shows the average gross tonnage of the floating factories and the average tonnage and engine power of the catchers.

It will be seen from this table that the average gross tonnage of the floating factories amounted to 20,858 in 1962–63 as compared with 19,352 gross tons in the preceding season. This increase is due to the fact that two of the four factory ships which were withdrawn from the operations in 1962–63 were relatively small. The average engine power of the catchers increased by 234 I.H.P., chiefly due to the fact that the 60 catchers withdrawn from the operations in 1962–63 were generally the smallest boats.

From the survey below will be seen the number of floating factories, the number of catchers and the average number of catchers engaged per floating factory from and including the season 1945–46.

Season	Number of floating factories	Number of catchers	Average number of catchers per floating factory
1945–46	9	77	8.6
1946–47	15	129	8.6
1947–48	17	162	9.5
1948–49	18	191	10.6

Season	Number of floating factories	Number of catchers	Average number of catchers per floating factory
1949–50	18	216	12.0
1950–51	19	239	12.6
1951–52	19	263	13.8
1952–53	16	230	14.4
1953–54	17	206	12.1
1954–55	19	233	12.3
1955–56	19	257	13.5
1956–57	20	225	11.3
1957–58	20	237	11.9
1958–59	20	235	11.8
1959–60	20	220	11.0
1960–61	21	252	12.0
1961–62	21	261	12.4
1962–63	17	201	11.8

In 1962–63 the Norwegian expeditions used on an average 8.0 catchers per floating factory (10.1 catchers in 1961–62), the British expedition 9.0 catchers (11.0 in 1961–62), the Japanese expeditions 11.2 catchers (12.3 in 1961–62), the Netherlands expedition 11.0 catchers (15.0 in 1961–62) and the Russian expeditions 17.5 catchers (16.8 in 1961–62).

Whaling results.

The total catch of the pelagic expeditions in the season 1962–63 amounted to 25,388 baleen whales, which, converted into blue-whale units gave 11,306.1 units. This was a decline of 3,947 blue-whale units as compared with the season 1961–62. Apart from the war seasons, the first postwar season (1945–46) and the lay-up season 1931–32, one must go right back to the season 1927–28 to find a similar low catch in the Antarctic.

The catch in 1962–63 with specification in respect to the various species of whales killed, will be seen from tables c and d, pages 14 and 15.

The catch in blue-whale units apportioned between the individual countries was as follows:

Countries	Catch 1962–63 in blue-whale units
Japan	6,149.6
U.S.S.R.	2,816.0
Norway	1,380.5
United Kingdom	502.5
Netherlands	457.5
Total	11,306.1

¹) Not including sperm-whales.

In 1962–63 the pelagic expeditions processed 11,283.5 blue-whale units, yielding 1,293,491 barrels of whale-oil, and 4,757 sperm-whales yielding 202,288 barrels of sperm-oil.

The total whaling results in the Antarctic from 1919–20 up to and including 1962–63 are given in table c, page 14. In table d, page 15, the pelagic results during the same period have been recorded separately.

The catch of 947 blue-whales in the season 1962–63 was the lowest recorded since the war seasons, and decreased by 171 animals as compared with the season 1961–62. The number of fin-whales killed in 1962–63 amounted to 18,668 or 7,770 animals fewer than in 1961–62. During the seasons 1953/54–1961/62 the fin-whale catch varied between 27,000 and 28,000 animals (including the number of fin-whales killed from the land stations on South Georgia). In 1962–63 270 humpbacks were killed, as compared with 309 in the preceding season. The catch of sei-whales was 5,503 or 750 animals more than in 1961–62. The number of sperm-whales killed in 1962–63, 4771 animals, was equal to the average catch of the 8 preceding seasons.

Table e, page 16, gives i.a. the average daily production of whale oil per floating factory as well as per catcher. The average daily production per floating factory in 1962–63 amounted to 689 barrels as against 744 and 956 barrels in the two previous seasons. During the seasons 1949/50–1958/59 the corresponding figures have varied between 1,266 and 1,690 barrels whale oil.

The average daily production of whale oil per catcher in 1962–63 was only 57 barrels, which is the lowest result ever recorded in pelagic whaling. During the seasons 1949/50–1958/59 the average daily production per catcher varied between 103 and 126 barrels.

Table f, page 18, illustrates the relation between the various species of whales killed in pelagic operations in the Antarctic from 1928–29. During the two last seasons, 1961–62 and 1962–63 3 per cent of all whales killed were blue-whales against 4.5 per cent in the season 1960–61. The fin-whale catch in 1962–63 represented 62 per cent compared with 71 per cent during each of the two preceding seasons. While the humpback catch during the four last seasons has diminished from 7 per cent of all whales killed in 1958–59 to 1 per cent in 1962–63, the catch of sei-whales during the same period has increased from 4 to 18 per cent. The sperm-whale catch represented 16 per cent of all whales killed in 1962–63 as against 13 and 12 per cent in the two preceding seasons.

In tables g and h, pages 19 and 20, the monthly catch of the various species of whales is recorded in absolute and percentage figures for a series of years.

Table f.—Whales caught in the pelagic whaling. Percentage figures.

Years.	Species of whales caught.					
	Blue.	Fin.	Hump-back.	Sei.	Sperm.	Total.

The distribution of the various species of whales killed in the season 1962-63 was as follows:

Catch between each 10 degrees latitude in the Antarctic.

	Blue-whales	Fin-whales	Humpbacks	Sei-whales	Sperm-whales	Total of whales
40°—50° South Lat.	602	3,747	25	1,524	1,317	7,215
50°—60° " "	139	10,402	7	1,269	1,973	13,790
60°—70° " "	180	4,475	238	2,689	1,467	9,049
70°—80° " "	23	12	—	—	—	35
Total	944	18,636	270	5,482	4,757	30,089

Catch in the different areas.

For the purpose of obtaining more detailed information on the pelagic activities in the Antarctic the area round the South Pole cap has been divided into the following 6 areas:—

Area I	between 60° west and 120° west
" II	" 0° " 60° "
" III	" 0° " 70° east
" IV	" 70° east " 130° "
" V	" 130° " 170° west
" VI	" 170° west " 120° "

From the survey below will be seen the whaling results in the individual areas during the period 1945/46-1962/63 and in the seasons 1961-62 and 1962-63.

Areas	Catch in blue-whale units 1945/46-1962/63		Catch in blue-whale units 1961/62		Catch in blue-whale units 1962/63	
	Number	Per cent	Number	Per cent	Number	Per cent
Total	265,898	100.0	15,229	100.0	11,306	100.0
Of which in:						
Area II.....	66,004	24.8	3,729	24.5	3,109	27.5
" III.....	97,397	36.6	6,488	42.6	5,491	48.6
" IV.....	43,139	16.2	1,792	11.8	1,010	8.9
" V.....	28,471	10.7	693	4.5	586	5.2
" VI.....	20,429	7.7	718	4.7	257	2.3
" I.....	10,458	4.0	1,809	11.9	853	7.5

Also in the season 1962-63 Areas II and III contributed most to the catch results. In these areas 3,109 and 5,491 blue-whale units were obtained respectively, i.e. altogether 8,600 units or 76 per cent of the total catch.

Table i, page 22, records the number and average size of blue-whales, fin-whales and humpbacks killed in the different areas for a series of years.

Table i.—Number and average size of whales caught

No.	Species of whales. Seasons.	Area II (60° W.-0°)			Area III (0°-70° E.)			Area IV (70° E.-130° E.)		
		Number of whales caught.	Per cent.	Average size of the whales.	Number of whales caught.	Per cent.	Average size of the whales.	Number of whales caught.	Per cent.	Average size of the whales.

In the season 1962–63 the largest number of blue-whales were killed in Area III, viz. 741 animals or 78.5 per cent of the total blue-whale catch. Next comes Area V with a catch of 115 blue-whales or 12.2 per cent.

The largest fin-whale catch in 1962–63 was obtained in Area III and II, where 8,977 animals (48.2 per cent) and 5,570 animals (29.9 per cent) were killed, respectively.

Of humpbacks 188 or 69.6 per cent of the total humpback catch were taken in Area V. Next comes Area I and Area III with a catch of 49 and 32 humpbacks, respectively.

The total number of sei- and sperm-whales killed in the season 1962–63 was as follows:

Area	Sei-whales caught in 1962–63		Sperm-whales caught in 1962–63	
	Number	Per cent	Number	Per cent
II.....	1,812	33.1	1,639	34.5

Table j, page 24, contains a summary of the number of whales killed by species in each area during the period 1931/32—1962/63. Of a total catch of 189,020 blue-whales during this period 40.7 per cent have been taken in Area III and 29.9 per cent in Area IV. Of a total fin-whale catch of 486,986 animals 38.0 per cent have been taken in Area III and 30.2 per cent in Area II. During the same period the total catch of humpbacks amounted to 28,626 animals, of which 43.5 per cent were taken in Area IV and 27.5 per cent in Area III.

Average size of the whales killed.

Table k, page 25, gives the average size of whales killed in the pelagic whaling operations and from South Georgia in the seasons 1951/52—1962/63.

The average size of the blue-whales killed in 1962—63 was 73.1 feet, which is a decline of 2.2 feet compared with the previous season. The average size of the other species was largely the same as in the nearest preceding seasons.

**Table I.—Average size of whales killed, by species and sex 1951/52—1962/63,
excl. of blue-whales less than 70', fin-whales less than 60' and humpbacks less than 35'.

For the seasons covered by table *k* the minimum length settled for blue-whales and humpbacks has been 70 ft. and 35 ft., respectively. The minimum length settled for fin-whales was 55 ft. until and including 1950–51, during the 3 successive seasons 60 ft. and from and including 1954–55 57 feet. In order to eliminate the possible influence which a variation in the legal size and the number of undersized whales killed might have on the average size, table *l*, above has been prepared. The average size of blue-whales killed (of 70 feet and over) fell from 75.7 feet in 1961–62 to 73.2 feet in 1962–63. The average size of fin-whales killed (of 60 feet and over) and of humpbacks killed (of 35 feet and over) was approximately the same as in the previous seasons, viz. about 68.0 and 41.5 feet.

The average size of blue- and fin-whales killed in the different areas during a number of seasons were as follows:

Season	Average size of blue-whales killed, in Engl. feet.						All areas
	Area II	Area III	Area IV	Area V	Area VI	Area I	
1958–59	80.5	79.0	78.0	78.5	76.9	—	78.3
1959–60	79.2	77.4	73.3	76.6	76.9	78.7	75.9
1960–61	79.7	72.6	71.8	78.6	78.0	77.0	74.0
1961–62	77.6	72.9	74.0	77.4	76.4	78.2	75.3
1962–63	83.8	71.2	74.7	82.1	77.9	75.6	73.1

The highest average size of blue-whales killed in the season 1962–63 was in Areas II and V with 83.8 and 82.1 feet, respectively. In Area III, where 741 blue-whales were caught or 78.5 per cent of the total blue-whale catch, the average size was 71.2 feet or only 1.2 feet over the stipulated mini-

mum size. The average size of fin-whales killed in 1962–63 varied from 67.0 feet (Area II) to 64.8 feet (Area VI).

Season	Average size of fin-whales killed, in Engl. feet.						
	Area II	Area III	Area IV	Area V	Area VI	Area I	All areas
1958–59	67.1	66.4	66.5	65.6	64.6	—	66.3
1959–60	66.9	66.7	66.3	66.8	65.1	64.5	66.6
1960–61	66.6	67.5	65.7	66.9	64.9	65.2	66.8
1961–62	67.5	66.7	64.8	65.5	64.9	66.0	66.5
1962–63	67.0	65.9	65.4	66.7	64.8	65.7	66.2

In the season 1962–63 the pelagic expeditions caught 15 blue-whales, 128 fin-whales, 2 humpbacks and 42 sperm-whales which were below the minimum size. The corresponding figures in 1961–62 were 34 blue-whales, 305 fin-whales, 2 humpbacks, 2 sei-whales and 5 sperm-whales.

Mature and immature whales.

Table *m*, page 28, gives particulars of the catch of mature and immature whales in absolute and relative figures during a series of seasons.

Animals of the following sizes are regarded as mature:

Blue-whales: Female	77 feet and over
Male	74 —, —
Fin-whales: Female	65 —, —
Male	63 —, —
Humpbacks: Female	41 —, —
Male	40 —, —

From table *m*, it will appear that 80.4 per cent of all blue-whales killed in 1962–63 were immature as compared with 58.9 and 71.7 per cent in the two preceding seasons. Of the fin-whales killed in 1962–63 35.0 per cent were immature against 31.9 and 27.7 per cent in 1961–62 and 1960–61. Of the humpbacks killed during the last season 37.4 per cent were immature.

Pelagic whaling results in relation to the whaling matériel and whaling period.

From the survey on top of page 30 it will be seen that the average result per catcher day in the last season was only 0.50 blue-whale units, as compared with 0.51, 0.68, 0.73 and 0.94 units in the four preceding seasons.

Table *n*, page 29, gives a survey of the pelagic whaling results of the individual participating countries as from 1951-52 regarding the number of whales killed, oil production and number of catchers employed in each season.

South Georgia.

Tables o, p, q and r (pages 31-34) deal with the catch from South Georgia. As previously mentioned no whaling operations were carried on from South Georgia during the season 1962-63. Whaling has otherwise been carried on from South Georgia ever since the Antarctic whaling commenced in 1904-05 and until 1961-62.

Oil production by participating countries.

In table s, pages 35 and 36, the total whaling results in the Antarctic during the seasons 1948/49-1962/63 have been distributed in respect to the individual participating countries. During the last 5 seasons the percentage proportion of the oil production of the individual countries has been as follows:

Countries	Oil production during the last 5 seasons				
	1958/59 Per cent	1959/60 Per cent	1960/61 Per cent	1961/62 Per cent	1962/63 Per cent
Norway	38.4	1.7	33.3	27.7	15.0
United Kingdom	13.6	13.4	13.7	10.4	5.3
Japan	30.0	28.7	29.9	35.9	47.9
U.S.S.R.	10.3	17.6	16.8	21.6	26.5
Netherlands	5.9	6.7	6.3	4.4	5.3
Argentina	1.8	1.9	—	—	—
Total	100.0	100.0	100.0	100.0	100.0

Oil production per blue-whale unit.

The average output of oil per blue-whale unit from and including the season 1925-26 has been recorded in table u, page 38. For the pelagic expeditions the average output was 114.6 barrels in 1962-63 against 118.1 and

¹⁾ Right-whale. ²⁾ In addition some whaling boats, which in advance of and after the pelagic baleen whale season were operating from South Georgia. These whaling boats are included under the pelagic whaling. To this fact due consideration has been taken by calculating the "Number of whales per boat."

¹⁾ Other whales are reduced to blue-whale units on the following basis: — 1 blue-whale = 2 fin-whales = 2½ humpbacks = 6 sei-whales. ²⁾ Barrel = 170 kg. (Barrel = abt. $\frac{1}{6}$ long ton. 1 long ton = 1,016 kg.)

116.9 barrels during the two preceding seasons. In the survey below is given the average output of oil per blue-whale unit in the individual areas from 1957–58:

Season	Average oil output per blue-whale unit during the last 6 seasons						Total Barrels
	Area II Barrels	Area III Barrels	Area IV Barrels	Area V Barrels	Area VI Barrels	Area I Barrels	
1957–58 ..	133.6	125.6	126.5	99.7	116.7	126.9	124.9
1958–59 ..	131.0	123.6	107.0	112.3	117.7	—	118.2
1959–60 ..	132.2	128.9	101.3	120.2	121.1	117.7	120.5
1960–61 ..	140.3	112.8	101.9	115.1	110.1	108.5	116.9
1961–62 ..	136.7	111.5	95.8	114.7	120.7	125.0	118.1
1962–63 ..	131.0	106.1	105.9	122.8	103.2	114.4	114.6

The highest yield in the season 1962–63 was in Area II with 131.0 barrels. Next comes Area V with 122.8 barrels and Area I with 114.4 barrels. In the other areas the yield varied between 103.2 and 106.1 barrels.

Table v, page 39, is recording the average weekly production per blue-whale unit for the pelagic expeditions during the seasons 1961–62 and 1962–63.

By-products.

In table t, page 37, detailed information is given on the production of by-products in the Antarctic during the post-war seasons. From and including the season 1958–59 the figures are distributed in respect to the indivi-
