P R E F A C E

The present publication, International Whaling Statistics No. LIII, comprises the whaling operations in the Antarctic during the season 1962–63 and on grounds outside the Antarctic in the calendar year 1963.

Statistical data are lacking from the Chinese whaling off the coast of Dairen, China.

Further, statistical data relating to the size of the whales killed have not been received from the following companies:

“*Industria Ballenera S.A.*”, *Spain*,
“*Compania Maritima Pesquera S.A.*”, *Peru*,
“*Consorcio Ballenero S.A.*”, *Peru*,
“*Compania Ballenera del Norte S.A.*”, *Peru*.

With these exceptions the statistics, to the best knowledge of the Committee, include all operations carried on in 1963.

O s l o , October 1964.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

This publication comprises the world aggregate whaling results for 1963, i.e. the catch in the Antarctic during the season 1962–63 and the catch on grounds outside the Antarctic during the calendar year 1963. Detailed information about the whaling activity in the Antarctic season 1962–63 has been given in International Whaling Statistics No. LIII. The present volume gives specifications of the operations on grounds outside the Antarctic in 1963.

In 1963 the following alterations took place in respect to the participation in the operations outside the Antarctic, as compared with the season 1962:

There were no whaling operations in 1963 from the shore stations belonging to

“Aukra Hval A/S”, Norway,

“Ryukyu Food Processing”, Okinawa Island,

“Gulf Whaling Industries Ltd.”, New Zealand and the Australian companies

“Whale Products Pty. Ltd.”, “Norfolk Whaling Co. Ltd.” and *“North Coast Whaling Pty. Ltd.”*

On the other hand the U.S.S.R. were operating off Kamtchatka with four floating factories, against two in 1962 and one in earlier seasons.

It should also be mentioned that 14 of the Antarctic floating factories on their voyages to and from the Antarctic whaling grounds, in 1963 caught 3,659 sperm-whales in the South Atlantic Ocean, in the Indian Ocean and in the South Pacific Ocean.

In 1963 whaling outside the Antarctic was carried on from the following grounds:

Africa: Natal and Cape Province.

North Atlantic and Arctic: Azores, Madeira, Spain, Norway, Faroe Islands and Iceland.

Pacific North: California, Oregon, British Columbia, North Pacific Ocean and Bering Sea, Kamtchatka, Kuril Islands, Japan, Ryukyu Islands and China.

Other grounds: Brazil, Peru, Chile, Australia, New Zealand, South Atlantic Ocean, Indian Ocean and South Pacific Ocean.

These whaling grounds are the same as those operated in the previous season.

From table *a*, page 13, it will be seen that whaling on grounds outside the Antarctic during the year 1963 was carried on from 38 shore stations, 7 floating factories and with 166 catchers. This is 9 shore stations and 9 catchers less, but two floating factories more than in 1962.

In the survey below is recorded the number of whales killed on grounds outside the Antarctic during the period 1937/38–1962/63. Figures for the Antarctic whaling are also included in order to give the total world whaling results during this period.

Season	Total of whales killed	In Antarctic			On other grounds		
		Total	Baleen whales	Sperm- whales	Total	Baleen whales	Sperm- whales

¹⁾ Excluding the catch from one Chinese whaling company.

From this survey will be seen that the total catch of whales, in the Antarctic and on grounds outside the Antarctic, has increased considerably during the postwar seasons. The total number of whales killed reached a maximum of about 66,000 both in 1960–61 and 1961–62, but in the last season 1962–63 it was reduced to 63,600. The increase in the total catch in later years is principally a result of the large catch of sperm-whales outside the Antarctic. Since the 1949-season this sperm-whale catch has increased from 4,900 animals to 18,500 in 1962 and to 23,100 in 1963, while the baleen whale catch outside Antarctic in the same period increased from 7,600 to 10,300. The decrease in the total number of whales

killed in 1962–63 must be ascribed to the strongly reduced baleen whale catch in the Antarctic in this season.

In order to be able to analyse the figures for the catch on grounds outside the Antarctic, which is the object of these statistics, the figures must be studied in respect to the various grounds as well as in respect to the species of whales killed.

In the *North Atlantic and Arctic* whaling has been carried on continually during the post-war seasons only from Norway and Iceland. From Faroe Islands and Greenland the whaling stopped in 1958, but it was resumed on a very low scale from Faroe Islands in 1962. Whaling from Newfoundland and Labrador was of considerable importance during the years 1946–1951. Later the stations were closed, but in 1956 and up till and including 1959 whaling was resumed on a considerably reduced scale.

The whaling operations off the coast of Norway, which are mainly based upon the catch of fin-whales, have been reduced in recent years. (See table *i*, page 24, with post-war figures from and including 1951.) Up till 1955 4 shore stations with 11–12 catchers were active, and the number of baleen whales killed varied in these years between 298 and 401. In the four last seasons, 1960–1963, when whaling was carried on from 2–3 shore stations with 6–9 catchers, the number of baleen whales killed during these years varied between 42 and 168.

The baleen whale catch off the Faroe Islands has declined since 1951, when 291 baleen whales were killed. In later years the catch has varied considerably from one year to another. In 1956 49 baleen whales were killed, in 1957 142, in 1958 17 and in 1963 3. In the seasons 1959–1961 no whaling took place off the Faroe Islands.

The catch of baleen whales off Iceland declined from 436 in 1957 to 385 in 1958, to 251 in 1959, to 202 in 1960 and 200 in 1961, but increased to 347 and 303 in 1962 and 1963. From and including the summer 1955 the taking of blue-whales in the North Atlantic and Arctic was prohibited for a period of 5 years, but Denmark and Iceland protested against this prohibition and were thus free to kill blue-whales. The prohibition was in 1960 extended for a further period of 5 years, and neither Denmark nor Iceland have now protested against it. The prohibition is thus complete for the North Atlantic and Arctic.

From Greenland and Newfoundland whaling in the later years up till 1959 has been carried on with one single catcher.

Whaling has also been carried on in the south eastern part of the Atlantic from the *Azores*, *Madeira* and *Spain* in later years (see tables *j–l*, page 25). This whaling is chiefly restricted to the catch of sperm-whales. The figures recorded for the baleen whale catch have declined. From *Portugal* whaling stopped in 1951 (se table *m*).

The whaling off the *African* coast (see table *o*, page 27) during the latest seasons has been carried on off Natal and Cape Province only, Natal being the only ground continually operated in all postwar years. The catch of sperm-whales has been of considerable importance in these years. The baleen whale catch off Natal in later years has been based upon the catch of fin-whales. Next to this species comes the sei-whale. The catch of humpbacks has declined considerably. Whaling of the Cape Province was resumed in 1957, and the results recorded show that the baleen whales killed in later years are sei- and fin-whales. Only a few blue-whales and humpbacks have been killed.

The whaling off the coast of French Congo stopped in 1952, when the number of humpbacks killed had decreased to 265, from 1,105 in 1951. On the Congo ground the catch of sei-whales was of some importance in 1951 and 1952. In 1959 whaling was resumed from this ground –now named “Gabon”–, and the number of humpbacks killed was 160.

Whaling in the *Pacific North* (see tables *p-t*, pages 28–30) was carried on in 1963 from California, Oregon, British Columbia, Japan, North Pacific Ocean and Bering Sea, Kamtchatka and Kuril Islands.

From California whaling has been carried on with 1–2 shore stations and 2–5 catchers during each season from and including 1956. Most of the whales killed were humpbacks and fin-whales. The whaling station on the coast of British Columbia was operating with 5–6 catchers in all postwar years up to and including 1959, and resumed whaling in 1962. Most of the baleen whales killed off British Columbia during the later years have been fin-whales. In 1962, however, a quite considerable number of sei-whales was killed.

The figures for the whaling carried on from the shore stations on the coasts of *Japan* (see table *q*, page 29) show that the catch of sperm-whales has become of great importance. The catch of baleen whales has shown some variations from year to year, but as a whole the figures show that the catch of the more valuable species, blue-whales and fin-whales, has declined while the catch of sei-whales has become very important.

The whaling in the *North Pacific Ocean and Bering Sea* (see table *r*, page 29) was carried on in the years 1955–1961 from 2 floating factories with 13–17 catchers, in 1962 and 1963 from 3 floating factories with 21 catchers. During these years the catch of sperm-whales as well as the catch of fin-whales, have been of great importance. In 1962, however, the fin-whale catch declined by 300 animals and in 1963 by 100 animals. The catch of sei-whales has varied considerably, while the blue-whale catch has been restricted to 70 animals per season. In 1962 and 1963, however, only 48 and 57 blue-whales were killed.

Whaling from *Kamtchatka* (see table *s*, page 29) has in most of the later years been based mainly on the catch of sperm-whales. In all the years 1951–1961 one floating factory with 5–15 catchers were operating on this ground. In the last seasons 1962 and 1963, when 2 floating factories with 28 catchers and 4 floating factories with 46 catchers, respectively, were in operation, a considerable number of baleen whales was killed on the Kamtchatka ground. The catch of humpbacks was exceptionally large in 1962 and 1963, viz. 1,213 and 2,242 animals, respectively. In 1963 also 347 blue-whales, 1,060 fin-whales and 514 sei-whales were killed. The catch of sperm-whales in 1963 amounted to 5,125 animals.

Whaling off the *Kuril Islands* (see table *t*, page 30) has been carried on during the last 5 seasons from 2–3 shore stations and with 5–19 catchers. The majority of the whales killed were sperm-whales, although the baleen whale catch is of some importance, including some few blue-whales.

Whaling off *Brazil* (see table *u*, page 30) has in later years been carried on from 1–2 shore stations with 2–5 catchers, and the whales killed are almost exclusively sei-whales. In the season 1961, when 4 catchers were employed, the sei-whale catch amounted to 958 animals, and in the two last seasons 1962 and 1963 with 3 catchers employed, the number of sei-whales caught was 610 and 346. In 1962 also 49 fin-whales were killed off Brazil.

In *Peru* whaling is carried on from 2–3 shore stations (see table *v*, page 30) and the whales killed during the last 7 seasons have been exclusively sperm-whales. In former years there were also killed some baleen whales, the number of which declined rapidly from and including 1955.

In *Chile* (see table *w*, page 31) whaling has been carried on in later years from 2–3 shore stations with 10–16 catchers. Most of the whales killed on the Chilean ground are sperm-whales, but the baleen whale catch has also been of some importance. During the last 7 seasons, however, the fin-whale catch has been strongly reduced, and in 1962 and 1963 the number of blue-whales killed was reduced to 11 and 31, respectively.

Whaling off *Australia* (see table *z*, page 31) has in most of the later years mainly been restricted to humpbacks. Since 1956, however, the sperm-whale catch has also been of some importance. During the years 1954–1962, when 5 shore stations with 9–14 catchers were in operation, the catch of humpbacks was reduced from 2,038 animals in 1954 to 720 animals in 1962, while in 1963 with 2 shore stations and 8 catchers, only 87 humpbacks were caught. On the other hand the catch of sperm-whales increased from 139 in 1957 to 282 in 1960 and to 629 in 1963.

On the *New Zealand* ground (see table z^1 , page 31) the whaling has also mainly been restricted to humpbacks. In the seasons 1956–1960, when mostly 2 shore stations with 3–6 catchers were in activity, the number of humpbacks caught increased from 143 to 361. During the 3 last seasons, however, the humpback catch was strongly reduced, while the number of sperm-whales caught in 1963 amounted to 114.

Table z², page 32, shows the production of by-products in the Antarctic and on the grounds outside the Antarctic during the last two seasons.

The chief by-products are whale meat and whale meal, of which the total production in 1962–63 were 203,142 tons and 74,905 tons, respectively. Of these quanta 163,688 tons whale meat and 35,503 tons whale meal were produced in the Antarctic.

In some tables z^{3-10} , pages 33–38, is recorded the catch of small whales on the various grounds outside the Antarctic during the last 5 seasons.
