PREFACE

The present publication, International Whaling Statistics No. LIV, embraces the results of the Antarctic whaling during the season 1963–64.

The statistical data in this publication are based on the reports sent in to the Bureau of International Whaling Statistics, Sandefjord.

Oslo, December 1964.

Gunnar Jahn.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

Regulative provisions.

In 1958 negotiations were initiated between Japan, Norway, U.S.S.R., U.K. and the Netherlands concerning an agreement for apportionment of the maximum catch, which at any time is in force according to decision of the International Whaling Commission. In 1962 the said countries came to an understanding on such an agreement, the so-called quota agreement. The quota agreement, which has been ratified by the governments of the respective countries, holds good until and including the 1965–66 season.

At the meeting of the Whaling Commission in 1963 the maximum catch for the pelagic expeditions in the Antarctic was reduced from 15,000 blue-whale units to 10,000 blue-whale units.

In accordance with the quota agreement the transfer of quotas from one country to another is permitted in connection with the sale of factory ships. One Norwegian and two British factory ships were sold to Japan, and an adjustment of the quotas of the said countries was effected at the same time. As a result of these adjustments the quota distribution in the season 1963–64 was as follows:

Japan	46 per cent	=	4,600	blue-whale units
Norway	28	—»—	=	2,800
U.S.S.R.	20	—»—	=	2,000
Netherlands	6	—»—	=	600
Total	100 per cent	=	10,000	blue-whale units

At the same meeting the Commission resolved that the blue-whale should be protected in all whaling grounds in the Antarctic, except the area between 40°–55° South Latitude and 0°–80° East Longitude. The area in which there was no protection, was the one mainly inhabited by a race known as the Pygmy blue-whale. The Commission also accorded complete protection to the humpback whale in the waters south of the Equator, as this species, like the blue-whale, was seriously depleted.

With these exceptions the regulative provisions in the 1963–64 season were the same as in the previous season.

Below is given the most important regulations governing the pelagic whaling in the last season:

- 1) The open season for the taking of fin- and sei-whales was from December 12th to April 7th, both days inclusive.
- 2) The open season for the taking of blue-whales was from February 1st to April 7th, both days inclusive, in the waters between 40°–55° South Latitude and from 0° eastwards to 80° East Longitude. In the other areas of the Antarctic the blue-whales were protected.
- 3) The open season for sperm-whales was 8 months.
- 4) It was forbidden to take:

Blue-whales	under 70 feet
Fin-whales	» 57 »
Sei-whales	» 40 »
Sperm-whales	» 38 »

Further it was forbidden to kill humpback whales, right-whales, grey-whales, and female whales accompanied by a calf.

- 5) The number of baleen whales taken during the open season in any waters south of 40° South Latitude by whale catchers attached to factory ships was not to exceed 10,000 blue-whale units in the 1963–64 season. (One blue-whale unit is reckoned as 1 blue-whale or 2 fin-whales or 6 seiwhales.)

The land stations on South Georgia were allowed a 6 months' consecutive catching period, and were otherwise subject to the same provisions as stated in paragraphs 2, 3 and 4, except that the minimum size limit for sperm-whales was 35 feet.

Whaling period.

All the expeditions commenced the catch of fin- and sei-whales on December 12th 1963 (except one Japanese factory ship, which caught mostly sperm-whales. This factory ship, which had a quota of about 100 blue-whale units, commenced the baleen whale catch on January 8th, and ceased on February 29th 1964.) The Japanese and Russian expeditions ceased the operations gradually as the stipulated quotas were reached. The first Japanese factory ship ceased operations on March 11th and the last on April 7th 1964. The first Russian factory ship ceased on April 4th and the last on April 6th 1964. The other factory ships, which did not reach the stipulated quotas, ceased operations on April 7th — the latest closing date according to the provisions of the Convention.

The whaling period and number of catching days for the pelagic baleen whaling operations in the seasons as from 1945–46 will be seen from the survey below:

Season	Whaling period	Catching days
1945–46.....	November 24th–March 24th	121
1946–47.....	December 8th–April 7th	121
1947–48.....	December 8th–March 31st	115
1948–49.....	December 15th–March 26th	102
1949–50.....	December 22nd–March 15th	84
1950–51.....	December 22nd–March 9th	78
1951–52.....	January 2nd–March 5th	64
1952–53.....	January 2nd–March 16th	74
1953–54.....	January 2nd–March 18th	76
1954–55.....	January 7th–March 19th	72
1955–56.....	January 7th–March 4th	58
1956–57.....	January 7th–March 16th	69
1957–58.....	January 7th–March 16th	69
1958–59.....	January 7th–March 16th	69
1959–60.....	December 28th–April 7th	102
1960–61.....	December 28th–April 7th	101
1961–62.....	December 12th–April 7th	117
1962–63.....	December 12th–April 7th	117
1963–64.....	December 12th–April 7th	118

In the last five seasons some of the expeditions closed their operations on an earlier date. The average catching period was therefore: In 1959–60 99 days, in 1960–61 96 days, in 1961–62 115 days, in 1962–63 111 days and in 1963–64 also 111 days.

The whaling period for blue-whales was until and including the season 1952–53 the same as the period for fin-whales. From and including the season 1953–54 the whaling period and the number of catching days for blue-whales have been as follows:—

Season	Whaling period	Catching days
1953–54	January 16th–March 18th	62
1954–55	January 21st–March 19th	58
1955–56	February 1st–March 4th	33
1956–57	February 1st–March 16th	44
1957–58	February 1st–March 16th	44
1958–59	February 1st–March 16th	44
1959–60	February 1st–April 7th	67
1960–61	February 1st–April 7th	66
1961–62	February 1st–April 7th	66
1962–63	February 1st–April 7th	66
1963–64	February 1st–April 7th	67

Weekly catch in blue-whale units.

The weekly catch of the last three seasons, based on the telegraphic reports from the whaling grounds, are recorded in table *a*, page 11. When considering the heavy decline in the catch, converted into blue-whale units, towards the end of these seasons, it must be taken into account that some of the expeditions terminated their operations during the period from March 11th to April 6th.

Whaling matériel.

During the Antarctic season 1963–64, 16 floating factories with a total of 190 catchers were in operation. This was one floating factory and 11 catchers less than in the 1962–63 season. A British factory ship, which in 1963 was sold to Japan, was not used in the Antarctic in the season 1963–64. With this exception the same pelagic expeditions participated in the operations in 1963–64 as in 1962–63.

The number of floating factories and catchers operated by the respective countries during the last three seasons were as follows:

Countries	Season 1961–62		Season 1962–63		Season 1963–64	
	Floating factories	Catchers	Floating factories	Catchers	Floating factories	Catchers
Norway	7	71	4	32	4	33
United Kingdom	2	22	1	9	—	—
Netherlands	1	15	1	11	1	11
Japan	7	86	7	79	7	78
U. S. S. R.	4	67	4	70	4	68
Total	21	261	17	201	16	190

Further, Japanese companies operated in the season 1963–64 from two shore stations on South Georgia with a total of 16 catchers. (11 of these catchers operated also with the pelagic expeditions.) One of the stations was only operating during the period October 7th to December 2nd 1963. In 1962–63 no whaling was carried on from South Georgia. Otherwise, whaling has been carried on from this Island ever since the Antarctic whaling commenced in 1904–05.

Table *b*, page 11, gives the number of floating factories and catchers engaged in pelagic whaling since the season 1945–46. The table also shows the average gross tonnage of the floating factories and the average tonnage and engine power of the catchers.

As will be seen from this table the average gross tonnage of the floating factories increased from 19,352 gross tons in 1961–62 to 20,858 in 1962–63 and 21,196 gross tons in 1963–64.

**Table a.—Weekly catch of whales in blue-whale units,
according to telegraphic reports from the whaling grounds.**

1955—56....	19	305,765	16,093	257	131,881	513	1,945
1956—57....	20	320,268	16,013	225	122,569	545	2,073
1957—58....	20	321,656	16,083	237	135,024	570	2,190
1958—59....	20	329,136	16,457	235	140,755	599	2,390
1959—60....	20	357,574	17,879	220	139,266	633	2,557
1960—61....	21	378,835	18,040	252	161,808	642	2,614
1961—62....	21	406,402	19,352	261	170,870	657	2,723
1962—63....	17	354,581	20,858	201	141,327	703	2,957
1963—64....	16	339,132	21,196	190	134,751	709	3,011

¹⁾ Excl. fl.f. "Baikal Maru" with 5 catchers. Catch of sperm-whales only.

The average engine power of the catchers increased from 2,723 I.H.P. in 1961-62 to 2,957 and 3,011 I.H.P. in 1962-63 and 1963-64, chiefly due to the fact that the catchers withdrawn from the operations were generally the smallest boats.

From the survey below will be seen the number of floating factories, the number of catchers and the average number of catchers engaged per floating factory from and including the season 1945-46.

Season	Number of floating factories	Number of catchers	Average number of catchers per floating factory
1945-46	9	77	8.6
1946-47	15	129	8.6
1947-48	17	162	9.5
1948-49	18	191	10.6
1949-50	18	216	12.0
1950-51	19	239	12.6
1951-52	19	263	13.8
1952-53	16	230	14.4
1953-54	17	206	12.1
1954-55	19	233	12.3
1955-56	19	257	13.5
1956-57	20	225	11.3
1957-58	20	237	11.9
1958-59	20	235	11.8
1959-60	20	220	11.0
1960-61	21	252	12.0
1961-62	21	261	12.4
1962-63	17	201	11.8
1963-64	16	190	11.9

The following survey shows the average number of catchers per floating factory specified for each country during the last three seasons:

Countries	Average number of catchers per floating factory		
	Season 1961-62	Season 1962-63	Season 1963-64
Norway	10.1	8.0	8.3
United Kingdom	11.0	9.0	-
Netherlands	15.0	11.0	11.0
Japan	12.3	11.3	11.1
U.S.S.R.	16.8	17.5	17.0
Total	12.4	11.8	11.9

Whaling results.

During the season 1963–64 the pelagic expeditions caught in all 28,921 whales in the Antarctic, of which 59 were lost. Thus the number of whales actually processed was 28,862, as will be seen from the survey below:

Species of whales	Whales captured	Lost whales	Processed whales
Blue-whales	112	—	112
Fin-whales	13,870	17	13,853
Humpbacks	2	—	2
Sei-whales	8,286	30	8,256
Total baleen whales	22,270	47	22,223
Sperm-whales	6,651	12	6,639
Total of whales	28,921	59	28,862

The pelagically caught baleen whales converted into blue-whale units amounted to 8,429 units in the season 1963–64 as compared with 11,306 units in 1962–63. The survey below shows the total catch in blue-whale units and the agreed maximum catch from and including the season 1947–48:

Season	Catch in blue-whale units	Agreed maximum quota Blue-whale units
1947–48	16,364.3	16,000
1948–49	16,007.4	16,000
1949–50	16,062.1	16,000
1950–51	16,416.2	16,000
1951–52	16,007.7	16,000
1952–53	14,866.6	16,000
1953–54	15,456.4	15,500
1954–55	15,323.5	15,500
1955–56	14,874.3	15,000
1956–57	14,745.2	14,500
1957–58	14,850.9	14,500
1958–59	15,300.8	15,000
1959–60	15,511.7	15,000
1960–61	16,433.5	¹⁾ —
1961–62	15,252.6	¹⁾ —
1962–63	11,306.1	15,000
1963–64	8,429.0	10,000

¹⁾ No maximum quota.

In 1963–64 the pelagic expeditions processed 8,415.5 blue-whale units yielding 1,026,346 barrels of whale-oil, and 6,639 sperm-whales yielding 273,130 barrels of sperm-oil.

The catch in blue-whale units in the season 1963–64 apportioned between the individual countries was as follows:

Countries	Catch 1963–64 in blue-whale units
Japan	4,600.1
U.S.S.R.	2,001.1
Norway	1,484.5
Netherlands	343.3
Total	8,429.0

In addition Japan was operating from two shore stations on South Georgia and had a catch resulting in 344.2 blue-whale units.

The total whaling results in the Antarctic from 1945–46 up to and including 1963–64 are given in table c, page 15. In table d, page 15, the pelagic results during the same period have been recorded separately.

As will appear from table d the catch of blue-whales in 1963–64 amounted to 112 only, which is the lowest catch of blue-whales ever recorded in the pelagic whaling in the Antarctic. One must be aware of the fact, however, that the blue-whales in 1963–64 were given total protection in the Antarctic, except in the waters north of 55° South and between 0° and 80° East.

The number of fin-whales killed in 1963–64 amounted to 13,870, or 4,798 fewer than in 1962–63 and 12,568 fewer than in 1961–62. During the seasons 1953/54–1961/62 the pelagic catch of fin-whales varied between 25,000 and 27,400 animals.

The catch of sei-whales reached a new record figure of 8,286 animals or 2,783 more than in the previous season.

Of sperm-whales a total of 6,651 animals was caught by the pelagic expeditions in the Antarctic in the season 1963–64, as compared with 4,771 sperm in the 1962–63 season. In addition the pelagic expeditions on voyage to and from the Antarctic caught north of 40° South lat. approximately 3,600 sperm-whales in 1963–64 against approximately 1,000 in the preceding season.

Table e, page 16, gives i.a. the average daily production of whale oil per floating factory as well as per catcher. The average daily production per floating factory in 1963–64 amounted to 611 barrels as against 689 and 744 barrels in the two previous seasons. During the seasons 1949/50–1958/59 the corresponding figures have varied between 1,266 and 1,690 barrels whale oil.

The average daily production of whale oil per catcher in 1963–64 was only 51 barrels, which is the lowest result ever recorded in pelagic whaling. During the seasons 1949/50–1958/59 the average daily production per catcher varied between 103 and 126 barrels.

Table c.—Total whaling in the Antarctic.

Years.	Species of whales caught.						Total of whales.	Oil production.	Expeditions.			Number of whales per boat.
	Blue.	Fin.	Hump-back.	Sei.	Sperm.	Others.			Shore stations.	Floating factories.	Catchers.

1963–64.....	0.4	48.0	—	28.6	23.0	100

killed were blue-whales, as against 3 per cent in each of the two preceding seasons. As mentioned above the blue-whale, however, had been given total protection in most of the Antarctic waters in 1963–64. The fin-whale catch in 1963–64 represented only 48 per cent compared with 62 per cent and 71 per cent during the two preceding seasons. On the other hand the sei-whale catch increased from about 18 per cent in 1962–63 to about 29 per cent in the last season, while the sperm-whale catch at the same time increased from 16 to 23 per cent.

In tables g and h, pages 18 and 19, the monthly catch of the various species of whales is recorded in absolute and percentage figures for a series of years.

From the survey below will be seen that the whaling operations in the Antarctic in later years have been carried on farther north than earlier:

Catch between each 10 degrees latitude in the Antarctic:

	Catch in blue-whale units

The distribution of the various species of whales killed in the season 1963-64 was as follows:

Catch between each 10 degrees latitude in the Antarctic.

	Blue-whales	Fin-whales	Sei-whales	Sperm-whales	Total of whales
40°—50° South Lat.	101	2,101	2,298	3,379	7,879
50°—60° " "	11	10,562	4,869	1,833 ¹⁾	17,277
60°—70° " "	—	1,190	1,089	1,427	3,706
70°—80° " "	—	—	—	—	—
Total	112	13,853	8,256	6,639 ¹⁾	28,862

¹⁾ In addition 2 humpbacks caught for fenders.

Catch in the different areas.

For the purpose of obtaining more detailed information on the pelagic activities in the Antarctic the area round the South Pole cap has been divided into the following 6 areas:—

Area I	between 120° west and	60° west
" II	" 0°	" 60° "
" III	" 0°	" 70° east
" IV	" 70° east	" 130° "
" V	" 130° "	" 170° west
" VI	" 170° west	" 120° "

From the survey below will be seen the whaling results in the individual areas during the period 1945/46—1963/64 and in the seasons 1962-63 and 1963-64.

Areas	Catch in blue-whale units 1945/46-1963/64		Catch in blue-whale units 1962/63		Catch in blue-whale units 1963/64	
	Number	Per cent	Number	Per cent	Number	Per cent
Total	274,345	100.0	11,306	100.0	8,447	100.0
<i>Of which in:</i>						
Area II.....	70,372	25.7	3,109	27.5	4,368	51.7
" III.....	100,205	36.5	5,491	48.6	2,808	33.2
" IV.....	43,506	15.9	1,010	8.9	367	4.4
" V.....	29,353	10.7	586	5.2	882	10.4
" VI.....	20,429	7.4	257	2.3	—	—
" I.....	10,480	3.8	853	7.5	22	0.3

The largest catch in the season 1963-64 was obtained in Area II with 4,368 blue-whale units, or about 52 per cent of the total catch. In the previous six seasons the catch in this area varied between 14 and 28 per cent of the total catch. In Area III the catch amounted to 2,808 blue-whale units or 33 per cent. Thus, in Areas II and III (from 60° West and

eastwards to 70° East) a total of 7,176 units were obtained, or 85 per cent of the total pelagic catch.

In Areas IV and V the results were 367 and 882 blue-whale units, respectively, i.e. 15 per cent of the total catch. In the other areas there was practically no whaling activity last season.

Table i, page 22, records the number and average size of blue-whales, fin-whales and humpbacks killed in the different areas for a series of years.

The total number of sei-whales and sperm-whales killed in the different areas during the season 1963–64 was as follows:

Area	Sei-whales caught in 1963–64		Sperm-whales caught in 1963–64	
	Number	Per cent	Number	Per cent
Total	8,256	100.0	6,639	100.0
Of which in:				
Area II	4,150	50.3	1,026	15.5
» III	1,984	24.0	1,773	26.7
» IV	274	3.3	1,400	21.1
» V	1,820	22.1	2,434	36.7
» VI	—	—	—	—
» I	28	0.3	6	—

Table j, page 24, contains a summary of the number of whales killed by species in each area during the period 1931/32–1963/64. Of a total catch of 189,132 blue-whales during this period 40.7 per cent have been taken in Area III and 29.9 per cent in Area IV. Of a total fin-whale catch of 500,839 animals 37.9 per cent have been taken in Area III and 30.9 per cent in Area II.

Average size of the whales killed.

Table k, page 25, gives the average size of whales killed in the pelagic whaling operations and from South Georgia in the seasons 1952/53–1963/64.

The average size of blue-whales killed in 1963–64 was 70.4 feet, which is a decline of 2.7 feet as compared with the previous season. This low average size is due to the fact that the blue-whales were given total protection in the Antarctic, except in the area between 40°–55° South and 0°–80° East, where the pygmy blue-whales are taken. The average size of fin-whales and sei-whales was largely the same as in the nearest preceding seasons and was for fin-whales 66.8 feet and for sei-whales 49.6 feet. The average size for sperm-whales in the pelagic whaling in 1963–64 fell by about one feet as compared with the 1962–63 season. The average size, 45.3 feet in 1963–64, was the lowest ever recorded for sperm-whales in the Antarctic.

Table i.—Number and average size of whales caught

For the seasons covered by table k the minimum length settled for blue-whales and humpbacks has been 70 ft. and 35 ft., respectively. The minimum length settled for fin-whales was 55 ft. until and including 1950–51, during the 3 successive seasons 60 ft. and from and including 1954–55 57 feet. In order to eliminate the possible influence which a variation in the legal size and the number of undersized whales killed might have on the average size, table l page 25, has been prepared.

The average size of blue- and fin-whales killed in the different areas during a number of seasons were as follows:

Season	Average size of blue-whales killed, in Engl. feet.						All areas
	Area II	Area III	Area IV	Area V	Area VI	Area I	
1958–59	80.5	79.0	78.0	78.5	76.9	—	78.3

The average size of fin-whales killed in the different areas during a number of seasons were, in Engl. feet:

Season	Area II	Area III	Area IV	Area V	Area VI	Area I	All areas
1958–59	67.1	66.4	66.5	65.6	64.6	—	66.3
1959–60	66.9	66.7	66.3	66.8	65.1	64.5	66.6
1960–61	66.6	67.5	65.7	66.9	64.9	65.2	66.8
1961–62	67.5	66.7	64.8	65.5	64.9	66.0	66.5
1962–63	67.0	65.9	65.4	66.7	64.8	65.7	66.2
1963–64	67.4	66.0	64.5	67.5	—	65.9	66.8

In the season 1963–64 the pelagic expeditions caught 39 blue-whales, 85 fin-whales, 1 sei-whale and 14 sperm-whales, which were below the minimum size. The corresponding figures in 1962–63 were 15 blue-whales, 128 fin-whales, 2 humpbacks and 42 sperm-whales.

Mature and immature whales.

Table *m*, page 27, gives particulars of the catch of mature and immature whales in absolute and relative figures during a series of seasons.

Animals of the following sizes are regarded as mature:

Blue-whales: Female	77 feet and over		
Male	74	—, —	
Fin-whales: Female	65	—, —	
Male	63	—, —	
Humpbacks: Female	41	—, —	
Male	40	—, —	

Pelagic whaling results in relation to the whaling matériel and whaling period.

From the survey below it will be seen that there has been a great decline in the average result of blue-whale units per catcher day during the latest seasons. Thus the catch in blue-whale units per catcher day amounted to 0.94 in 1958–59, 0.68 in 1960–61, 0.50 in 1962–63 and 0.41 in 1963–64.

Season	Area II	Average result of blue-whale units per catcher's day's work.					
		Area III	Area IV	Area V	Area VI	Area I	All areas
1958–59	0.79	0.94	1.03	0.93	0.93	—	0.94

¹⁾ Barrel = 170 kg. (Barrel = abt. 1/6 long ton. 1 long ton = 1,016 kg.)

Table *n*, page 28, gives a survey of the pelagic whaling results of the individual participating countries as from 1952-53 regarding the number of whales killed, oil production and number of catchers employed in each season.

South Georgia.

The whaling results from South Georgia for each season since 1945-46 are given in the table below. There were no whaling operations from South Georgia during the season 1962-63. Otherwise, whaling has been carried on from South Georgia ever since the Antarctic whaling commenced in 1904-05.

During the season 1963-64 2 shore stations with about 8 catching boats, on an average, were in activity. One of the stations, however, was operating only for a short period. The catch result was 1,021 whales, from which were produced 38,241 barrels of whale oil and 3,041 barrels of sperm oil.

Tables p and q, pages 30 and 31, give the catch off South Georgia by months in absolute and percentage figures from and including 1954-55. Table r, page 32, shows the proportion of mature and immature whales killed.

Table o.—South Georgia.

¹⁾ Right-whale. ²⁾ In addition some whaling boats, which in advance of and after the pelagic baleen whale season were operating from South Georgia. These whaling boats are included under the pelagic whaling. To this fact due consideration has been taken by calculating the "Number of whales per boat." ³⁾ The catch was carried on with about 8 whaling boats, on an average, as 12 of the boats after 2 months of operation were transferred to the pelagic whaling.

Table p.—South Georgia. Catch by months in absolute figures.

¹⁾ Products such as: Teeth, baleen, ambergris, pancreas, processed bone, bone fertilizer, protein, hypophyses, internal organs, blubber for leather, gelatin material, tail flakes, whale meat-extract etc. ²⁾ Including 6,321 long-tons whale meal and 715 long tons whale meat etc. produced by a British company registered at Falkland Islands. ³⁾ Incl. 7,168 long tons whale meal produced by a British company registered at Falkland Islands.

Oil production by participating countries.

In table s, pages 33 and 34, the total whaling results in the Antarctic during the seasons 1950/51–1963/64 have been distributed in respect to the individual participating countries. During the last 4 seasons the percentage proportion of the oil production of the individual countries has been as follows:

Countries	Oil production during the last 4 seasons			
	1960/61 Per cent	1961/62 Per cent	1962/63 Per cent	1963/64 Per cent

Oil production per blue-whale unit.

The average output of oil per blue-whale unit from and including the season 1945–46 has been recorded in table u, page 37. For the pelagic expeditions the average output was 121.9 barrels in 1963–64 against 114.6 and 118.1 barrels during the two preceding seasons. In the survey below is given the average output of oil per blue-whale unit in the individual areas from 1958–59:

Season	Average oil output per blue-whale unit during the last 6 seasons						Total Barrels
	Area II Barrels	Area III Barrels	Area IV Barrels	Area V Barrels	Area VI Barrels	Area I Barrels	
1958–59 ..	131.0	123.6	107.0	112.3	117.7	—	118.2
1959–60 ..	132.2	128.9	101.3	120.2	121.1	117.7	120.5
1960–61 ..	140.3	112.8	101.9	115.1	110.1	108.5	116.9
1961–62 ..	136.7	111.5	95.8	114.7	120.7	125.0	118.1
1962–63 ..	131.0	106.1	105.9	122.8	103.2	114.4	114.6
1963–64 ..	130.3	112.8	101.4	109.9	—	—	112.0

The highest yield in the season 1963–64 was in Area II with 130.3 barrels. Next came Area III with 112.8 barrels.

Table v, page 37, is recording the average weekly production per blue-whale unit for the pelagic expeditions during the seasons 1962–63 and 1963–64.

By-products.

In table t, page 35, detailed information is given on the production of by-products in the Antarctic during the post-war seasons. From and including the season 1959–60 the figures are distributed in respect to the

Table u.—Average production of oil per blue-whale unit.¹⁾

individual countries. In the last season the production of whale meat incl. blubber for food amounted to 173,736 tons as compared with 163,688 tons in 1962–63. Of whale meal there was produced 31,655 tons in 1963–64 against 35,503 tons in the preceding season.

Whaling fleet crews.

From the survey on next page will be seen the number of men of different nationalities employed in the Antarctic whaling industry during the 3 latest seasons. The figures include the crews on the freezing- and refrigeratorships operating in the Antarctic.

Number of men employed in the Antarctic whaling industry:
