P R E F A C E

The present publication, International Whaling Statistics No. LVI, embraces the results of the Antarctic whaling during the season 1964–65.

The statistical data in this publication are based on the reports sent in to the Bureau of International Whaling Statistics, Sandefjord.

Oslo, December 1965.

Gunnar Jahn.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

Regulative provisions.

Since at the meeting of the International Whaling Commission in 1964 agreement was not reached on a maximum catch for the season 1964–65, the representatives of the four whaling countries — Norway, Japan, U.S.S.R. and the Netherlands — decided to respect a maximum catch for the season 1964–65 of 8,000 blue-whale units. After the Netherlands had in 1964 transferred their quota to Japan, the quota allocation for this season was as follows:

Norway	28 per cent	= 2,240 blue-whale units
Japan	52 —»—	= 4,160 —»—
U.S.S.R.	20 —»—	= 1,600 —»—
<hr/>		
Total	100 per cent = 8,000 blue-whale units	

The most important regulations governing the pelagic whaling in the season 1964–65 were as follows:

1. The open season for the taking of fin- and sei-whales was from December 12th to April 7th, both days inclusive.
2. At the fifteenth meeting of the International Whaling Commission it was decided:

«It is forbidden to kill or attempt to kill blue-whales in the waters south of 40° South Latitude except in the waters north of 55° South Latitude, from 0° eastwards to 80° East Longitude.»

At the sixteenth meeting it was decided:

«It is forbidden to kill or attempt to kill blue-whales in the waters south of 40° South Latitude.»

This amendment of the Schedule was objected to within the prescribed period by the governments of Japan, The Netherlands, Norway, the United Kingdom and the Union of Soviet Socialist Republics. Consequently expeditions under the flag of these members were in the season 1964–65 allowed to catch blue-whales from February 1st to April 7th, both days inclusive, in the waters between 40°–55° South Latitude and from 0° eastwards to 80° East Longitude. In the other areas of the Antarctic the blue-whales were protected.

3. The open season for taking of sperm-whales was 8 months.
4. It was forbidden to take blue-whales under 70 feet, fin-whales under 57 feet, sei-whales under 40 feet and sperm-whales under 38 feet. Further it was forbidden to kill humpback whales, right-whales, grey-whales, and female whales accompanied by a calf.

The land stations on South Georgia were allowed a 6 months' consecutive catching period, and were otherwise subject to the same provisions as stated in paragraphs 3 and 4, except that the minimum size limit for sperm-whales was 35 feet.

Whaling period.

As mentioned above it was allowed to take fin- and sei-whales from December 12th, inclusive. Two of the Russian expeditions, however, commenced the catch of baleen whales at a later date, as they during the first part of the season caught sperm-whales only. The Japanese and Russian expeditions ceased the operations gradually as the stipulated quotas were reached. The first Japanese factory ship ceased operation on February 28th and the last on April 7th 1965. The first Russian factory ship ceased operation on March 18th and the last on April 1st, 1965. The other factory ships, which did not reach the stipulated quotas, ceased operations on April 7th, which was the latest closing date according to the provisions of the International Whaling Convention.

The whaling period and number of catching days for the pelagic baleen whaling operations in the seasons 1955/56–1964/65 will be seen from the following survey:

Season	Whaling period	Catching days
1955–56.....	January 7th–March 4th	58
1956–57.....	January 7th–March 16th	69
1957–58.....	January 7th–March 16th	69
1958–59.....	January 7th–March 16th	69
1959–60.....	December 28th–April 7th	102
1960–61.....	December 28th–April 7th	101
1961–62.....	December 12th–April 7th	117
1962–63.....	December 12th–April 7th	117
1963–64.....	December 12th–April 7th	118
1964–65.....	December 12th–April 7th	117

In the last six seasons some of the expeditions closed their baleen whale operations at an earlier date. The average catching periods were therefore such, as shown on the top of next page:

Season	Average catching period
1959-60	99 days
1960-61	96 »
1961-62	115 »
1962-63	111 »
1963-64	111 »
1964-65	104 »

The whaling period for blue-whales in the seasons 1955/56-1964/65 was from February 1st to April 7th, both days inclusive.

Whaling matériel.

In pelagic whaling during the Antarctic season 1964-65, 15 floating factories with 172 catching boats were in operation. This was one floating factory less than in the previous season, because the Dutch factory ship, which in 1964 was sold to Japan, was not engaged in the season 1964-65. With this exception the same pelagic expeditions participated in the operations in 1964-65 as in 1963-64.

The number of floating factories and catchers operated by the respective countries during the last three seasons were as follows:

Countries	Season 1962-63		Season 1963-64		Season 1964-65	
	Floating factories	Catchers	Floating factories	Catchers	Floating factories	Catchers
Norway	4	32	4	33	4	36
Japan	7	79	7	78	7	71
U. S. S. R.	4	70	4	68	4	65
Netherlands	1	11	1	11	-	-
United Kingdom	1	9	-	-	-	-
Total	17	201	16	190	15	172

As in the season 1963-64 two shore stations on South Georgia were also in 1964-65 leased to Japanese whaling companies. The whaling period for one of the stations was from October 1st to December 4th 1964, while the whaling period for the other station was from October 7th 1964 to March 23rd 1965.

Table a, page 10, gives the number of floating factories and catchers engaged in pelagic whaling since the season 1946-47. The table also shows the average gross tonnage of the floating factories and the average tonnage and engine power of the catchers.

From the survey at the bottom of next page will be seen the number of floating factories, the number of catchers and the average number of catchers engaged pr. floating factory from and including the season 1946-47.

Table a.—Number and gross tonnage of floating factories and catchers engaged in pelagic whaling in the Antarctic 1946/47—1964/65.

Seasons	Floating factories			Catchers			
	Number	Gross tonnage	Average gross tonnage per fl. factory	Number	Gross tonnage	Average per catcher of:

¹⁾ Excl. fl.f. "Baikal Maru" with 5 catchers. Catch of sperm-whales only.

Season	Number of floating factories	Number of catchers	Average number of catchers per floating factory
1946–47	15	129	8.6
1947–48	17	162	9.5
1948–49	18	191	10.6
1949–50	18	216	12.0
1950–51	19	239	12.6
1951–52	19	263	13.8
1952–53	16	230	14.4
1953–54	17	206	12.1
1954–55	19	233	12.3
1955–56	19	257	13.5
1956–57	20	225	11.3
1957–58	20	237	11.9
1958–59	20	235	11.8
1959–60	20	220	11.0
1960–61	21	252	12.0
1961–62	21	261	12.4
1962–63	17	201	11.8
1963–64	16	190	11.9
1964–65	15	172	11.5

The following survey shows the average number of catchers per floating factory specified for each country during the last four seasons:

Countries	Average number of catchers per floating factory Season 1961—62	Season 1962—63	Season 1963—64	Season 1964—65
Norway	10.1	8.0	8.3	9.0
Japan	12.3	11.3	11.1	10.1
U.S.S.R.	16.8	17.5	17.0	16.3
Netherlands	15.0	11.0	11.0	—
United Kingdom	11.0	9.0	—	—
Total	12.4	11.8	11.9	11.5

Catch results.

During the season 1964—65 the pelagic expeditions caught in all 31,413 whales in the Antarctic, of which 47 were lost. Thus the number of whales actually processed was 31,366, as will be seen from the following survey:

Species of whales	Whales captured	Lost whales	Processed whales	Captured whales in blue-whale units
Blue-whales	20	—	20	20.0
Fin-whales	7,308	2	7,306	3,654.0
Sei-whales	19,874	36	19,838	3,312.1
Total baleen whales	27,202	38	27,164	6,986.1
Sperm-whales	4,211	9	4,202	—
Total of whales	31,413	47	31,366	6,986.1

The pelagically caught baleen whales converted into blue-whale units amounted to 6,986.1 units in the season 1964—65 as compared with 8,429 units in 1963—64. The survey below shows the total catch in blue-whale units and the agreed maximum catch from and including the season 1947—48:

Season	Catch in blue-whale units	Agreed maximum quota Blue-whale units
1947—48	16,364.3	16,000
1948—49	16,007.4	16,000
1949—50	16,062.1	16,000
1950—51	16,416.2	16,000
1951—52	16,007.7	16,000
1952—53	14,866.6	16,000
1953—54	15,456.4	15,500
1954—55	15,323.5	15,500

(Cont. on next page.)

Season	Catch in blue-whale units	Agreed maximum quota Blue-whale units
1955–56	14,874.3	15,000
1956–57	14,745.2	14,500
1957–58	14,850.9	14,500
1958–59	15,300.8	15,000
1959–60	15,511.7	15,000
1960–61	16,433.5	1) —
1961–62	15,252.6	1) —
1962–63	11,306.1	15,000
1963–64	8,429.0	10,000
1964–65	6,986.1	8,000

1) No maximum quota.

In the season 1964–65 the pelagic expeditions in the Antarctic processed 6,979 blue-whale units yielding 844,457 barrels of whale-oil, and 4,202 sperm-whales yielding 173,154 barrels of sperm-oil.

The catch in blue-whale units in the last three seasons apportioned between the individual countries was as follows:

Countries	Catch in blue-whale units		
	Season 1962–63	Season 1963–64	Season 1964–65
Norway	1,380.5	1,484.5	1,273.4
Japan	6,149.6	4,600.1	4,124.6
U.S.S.R.	2,816.0	2,001.1	1,588.1
Netherlands	457.5	343.3	—
United Kingdom	502.5	—	—
Total	11,306.1	8,429.0	6,986.1

In addition Japan was operating from two shore stations on South Georgia in each of the seasons 1963–64 and 1964–65 and had a catch resulting in 344.2 and 335.8 blue-whale units, respectively.

The total whaling results in the Antarctic from 1946–47 up to and including 1964–65 are given in table b, page 13. In table c, page 13, the pelagic results during the same period have been recorded separately.

As will appear from table c the pelagic baleen whale catch in the Antarctic has during the two last seasons been based almost exclusively on fin- and sei-whales. While in the last season the fin-whale catch declined to 7,308 animals from 13,870 in 1963–64, the sei-whale catch, on the other hand, increased to 19,874 animals from 8,286 in 1963–64. This considerable increase in the catch of sei-whales is due to the fact that the expeditions, owing to the fall-off in the catch of fin-whales, have concentrated their activity on fields where occurrences of sei-whales were largest.

Table b.—Total whaling in the Antarctic.

Years.	Species of whales caught.						Total of whales.	Oil production.	Expeditions.			Number of whales per boat.

1) Right-whales.

Of sperm-whales a total of 4,211 animals was caught, as compared with 6,651 in the season 1963–64 and 4,771 in the season 1962–63. In addition the pelagic expeditions caught outside the Antarctic (north of 40° South Latitude) approximately 6,000 sperm-whales in 1964–65, as compared with approximately 3,600 and 1,000 in the two preceding seasons.

Table d, page 15, illustrates the relation between the various species of whales killed in pelagic whaling in the Antarctic from 1946–47. During the last season 1964–65 the fin-whale catch represented only 23 per cent of the total catch compared with 48 and 62 per cent during the two preceding seasons. On the other hand the sei-whale catch increased from about 29 per cent in 1963–64 to about 63 per cent in the last season. The catch of sperm-whales in the Antarctic (i.e. south of 40° South Latitude) amounted to about 13 per cent last season as against 23 per cent in 1963–64.

Table e, on next page, gives i.a. the average daily production of whale oil per floating factory as well as per catcher. The average daily production of whale oil per floating factory in 1964–65 amounted to 543 barrels as against 611 barrels in 1963–64. During the ten seasons 1949/50–1958/59 the corresponding figures varied between 1,266 and 1,690 barrels of whale oil.

The average daily production of whale oil per catcher in 1964–65 was only 48 barrels, which is the lowest result ever recorded in pelagic whaling. During the seasons 1949/50–1958/59 the average daily production per catcher varied between 103 and 126 barrels.

In tables f and g, pages 16 and 17, the monthly catch of the various species of whales is recorded in absolute and percentage figures for a series of years.

The movement of the whaling activities northwards continued in the last season. Between 40°–50° South Lat. the catch resulted in 2,695 blue-whale units, and this represents about 38 per cent of the total catch. It is only in recent seasons that whaling has been undertaken in these waters. This will appear from the following survey:

Catch between each 10 degrees latitude in the Antarctic:

	Season 1938/39	Season 1948/49	Catch in blue-whale units Season 1958/59	Season 1962/63	Season 1963/64	Season 1964/65

length not stated. *) Incl. 2 humpbacks caught in Area III in 1963—64.

The distribution of the various species of whales caught in the season 1964–65 was as follows:

Catch between each 10 degrees latitude in the Antarctic.

	Blue-whales	Fin-whales	Sei-whales	Sperm-whales	Total of whales
40°—50° South Lat.	14	2,202	9,285	2,620	14,121
50°—60° " "	6	4,695	9,696	1,203	15,600
60°—70° " "	—	409	857	379	1,645
Total	20	7,306	19,838	4,202	31,366

Catch in the different areas.

For the purpose of obtaining more detailed information on the pelagic activities in the Antarctic the area round the South Pole cap has been divided into the following 6 areas:—

Area II between	60° West and	0°	
" III "	0°	"	70° East
" IV "	70° East	"	130° "
" V "	130° "	"	170° West
" VI "	170° West	"	120° "
" I "	120° "	"	60° "

From the survey below will be seen the whaling results in the individual areas during the last three seasons.

Areas	Catch in blue-whale units 1962/63		Catch in blue-whale units 1963/64		Catch in blue-whale units 1964/65	
	Number	Per cent	Number	Per cent	Number	Per cent
Total	11,306	100.0	8,447	100.0	7,052	100.0
Of which in:						
Area II.....	3,109	27.5	4,368	51.7	4,918	69.8
" III.....	5,491	48.6	2,808	33.2	687	9.7
" IV.....	1,010	8.9	367	4.4	658	9.3
" V.....	586	5.2	882	10.4	749	10.6
" VI.....	257	2.3	—	—	—	—
" I.....	853	7.5	22	0.3	40	0.6

In the last season 1964–65 the largest catch was obtained in Area II (between 0° and 60° West) with 4,918 blue-whale units, or about 70 per cent of the total pelagic catch, whilst 30 per cent was fairly equally divided between Areas III, IV and V.

Table h, page 18, records the number and average size of blue-whales, fin-whales and humpbacks killed in the different areas for a series of years.

The total number of sei-whales and sperm-whales killed in the different areas during the seasons 1963–64 and 1964–65 were as follows:

Areas	Sei-whales caught				Sperm-whales caught			
	Season Number	1963/64 Per cent	Season Number	1964/65 Per cent	Season Number	1963/64 Per cent	Season Number	1964/65 Per cent
Total	8,256	100.0	19,838	100.0	6,639	100.0	4,202	100.0
Of which in:								
Area II	4,150	50.3	15,584	78.6	1,026	15.5	1,186	28.2
„ III	1,984	24.0	443	2.2	1,773	26.7	506	12.0

„ V	1,820	22.1	2,207	11.1	2,434	36.7	1,503	35.8
„ VI	—	—	—	—	—	—	22	0.5
„ I	28	0.3	40	0.2	6	—	158	3.8

Table i, below, contains a summary of the number of whales killed by species in each area during the period 1931/32—1964/65. Of a total catch of 867,400 whales during this period about 59 per cent have been fin-whales, 22 per cent blue-whales, 10 per cent sperm-whales, 6 per cent sei-whales and 3 per cent humpbacks. About 64 per cent of the total catch have been taken in Areas II and III, i.e. from 60° West eastwards to 70° East Longitude.

Table i.—Number of whales killed during the seasons 1931/32—1964/65.

Average size of the whales killed.

Table j, below, gives the average size of whales killed in the pelagic whaling operations and from South Georgia in the seasons 1955/56—1964/65.

The average size of the 20 blue-whales killed last season was 69.7 feet. The average size of fin-whales killed in 1964–65 was 65.5 feet, which is the lowest average size recorded for fin-whales in the pelagic whaling in the Antarctic. In the previous 10 seasons the average size varied between 66.2 and 66.9 feet. The average size of sei-whales declined by 0.3 feet to 49.3 feet as compared with the previous season, while the average size of sperm-whales in the pelagic whaling increased by 0.3 feet to 45.6 feet.

Table j.—Average size of whales killed in the Antarctic, by whaling grounds and species of whales 1955/56—1964/65.

Mature and immature whales.

Table k, page 24, gives particulars of the catch of mature and immature whales in absolute and relative figures during a series of seasons.

Animals of the following sizes are regarded as mature:

Blue-whales: Female	77 feet and over		
Male	74	—, —	
Fin-whales: Female	65	—, —	
Male	63	—, —	
Humpbacks: Female	41	—, —	
Male	40	—, —	

*Pelagic whaling results in relation to the whaling matériel
and whaling period.*

From the survey below it will be seen that there has been a great decline in the average result of blue-whale units per catcher day during the latest seasons. Thus the catch in blue-whale units per catcher day amounted to 0.94 in 1958–59, 0.68 in 1960–61, 0.50 in 1962–63 and 0.40 in 1964–65.

Season	Average result of blue-whale units per catcher's day's work.						
	Area II	Area III	Area IV	Area V	Area VI	Area I	All areas
1958–59	0.79	0.94	1.03	0.93	0.93	—	0.94
1959–60	0.55	0.68	0.91	0.87	0.57	0.62	0.73
1960–61	0.59	0.74	0.85	0.61	0.64	0.47	0.68
1961–62	0.45	0.57	0.57	0.39	0.38	0.53	0.51
1962–63	0.51	0.59	0.36	0.46	0.42	0.36	0.50
1963–64	0.52	0.42	0.19	0.27	—	0.23	0.41
1964–65	0.47	0.38	0.29	0.25	—	0.54	0.40

Table l, page 25, gives a survey of the pelagic whaling results of the individual participating countries as from 1955–56 regarding the number of whales killed, oil production and number of catchers employed in each season.

South Georgia.

The whaling results from South Georgia for each season since 1946–47 are given in table m, page 26. There were no whaling operations from South Georgia during the season 1962–63. Otherwise, whaling has been carried on from South Georgia ever since the Antarctic whaling commenced in 1904–05.

During each of the two last seasons, 1963–64 and 1964–65, 2 shore stations were in activity, but one of them, however, was operating only for a short period in each season. The catch result in 1964–65 was 503

¹⁾ Right-whale. ²⁾ In addition some whaling boats, which in advance of and after the pelagic baleen whale season were operating from South Georgia. These whaling boats are included under the pelagic whaling. To this fact due consideration has been taken by calculating the "Number of whales per boat." ³⁾ Some of these catchers were transferred to the pelagic expeditions after about 2 months' catch.

fin-whales, 506 sei-whales and 141 sperm-whales, from which were produced 39,029 barrels of whale oil and 6,776 barrels of sperm-oil.

Tables n and o, pages 27 and 28, give the catch off South Georgia by months in absolute and percentage figures from and including 1955-56. Table p, page 29, shows the proportion of mature and immature whales killed.

Oil production by participating countries.

In table q, page 30, the total whaling results in the Antarctic during the seasons 1955/56-1964/65 have been distributed in respect to the individual participating countries. During the last 5 seasons the percentage proportion of the oil production of the individual countries has been as follows:

Countries	Oil production during the last 5 seasons				
	1960/61 Per cent	1961/62 Per cent	1962/63 Per cent	1963/64 Per cent	1964/65 Per cent
Norway	33.3	27.7	15.0	18.5	21.3
Japan	29.9	35.9	47.9	49.7	51.7
U.S.S.R.	16.8	21.6	26.5	27.1	27.0
Netherlands	6.3	4.4	5.3	4.7	—
United Kingdom	13.7	10.4	5.3	—	—
Total	100.0	100.0	100.0	100.0	100.0

Oil production per blue-whale unit, see page 32.

¹⁾ Products such as: Teeth, baleen, ambergris, pancreas, processed bone, bone fertilizer, protein, hypophyses, internal organs, blubber for leather, gelatin material, tail flukes, whale meat-extract etc. ²⁾ Including 6,321 long-tons whale meal and 715 long tons whale meat etc. produced by a British company registered at Falkland Islands. ³⁾ Incl. 7,168 long tons whale meal produced by a British company registered at Falkland Islands. ⁴⁾ In addition 922 Mill. units of Vitamin A (Liver oil) were produced.

Oil production per blue-whale unit.

The average output of oil per blue-whale unit from and including the season 1955–56 has been recorded in table s, below. For the pelagic expeditions the average output was 121 barrels in 1964–65 against 122 and 114.6 barrels during the two preceding seasons.

Table s.—Average production of oil per blue-whale unit.¹⁾

Years.	South Georgia.	Pelagic whaling.	Years.	South Georgia.	Pelagic whaling.
	Barrels ²⁾	Barrels ²⁾		Barrels	Barrels
1955–56.....	123.6	121.6	1961–62.....	112.9	118.1
1956–57.....	122.9	128.7	1962–63.....	—	114.6
1957–58.....	126.9	124.9	1963–64.....	112.1	122.0
1958–59.....	114.0	118.2	1964–65.....	117.9	121.0
1959–60.....	123.0	120.5			
1960–61.....	127.2	116.9			

¹⁾ Other whales are reduced to blue-whale units on the following basis: — 1 blue-whale = 2 fin-whales = $2\frac{1}{2}$ humpbacks = 6 sei-whales. ²⁾ Barrel = 170 kg. (Barrel = abt. $\frac{1}{6}$ long ton. 1 long ton = 1,016 kg.)

In the survey below is given the average output of oil per blue-whale unit in the individual areas from 1959–60:

Season	Average oil output per blue-whale unit during the last 6 seasons							Total Barrels
	Area II Barrels	Area III Barrels	Area IV Barrels	Area V Barrels	Area VI Barrels	Area I Barrels	Total Barrels	
1959–60 ..	132.2	128.9	101.3	120.2	121.1	117.7	120.5	
1960–61 ..	140.3	112.8	101.9	115.1	110.1	108.5	116.9	
1961–62 ..	136.7	111.5	95.8	114.7	120.7	125.0	118.1	
1962–63 ..	131.0	106.1	105.9	122.8	103.2	114.4	114.6	
1963–64 ..	130.3	112.8	101.4	109.9	—	—	122.0	
1964–65 ..	123.7	110.5	103.9	114.7	—	134.3	121.0	

The highest yield in the season 1964–65 was in Area I with 134.3 barrels. Next came Area II with 123.7 barrels.

Table t, page 33, is recording the average weekly production of whale-oil per blue-whale unit for the pelagic expeditions during the last two seasons.

By-products.

In table r, page 31, detailed information is given on the production of by-products in the Antarctic during the post-war seasons. From and including the season 1960–61 the figures are distributed in respect to the individual countries.

In the last season the production of whale meat (incl. blubber for food) amounted to 171,662 tons as compared with 173,736 tons in 1963–64. Of whale meal there was produced 33,678 tons in 1964–65 against 31,655 tons in the preceding season.

**Table t.—Average weekly production of whale-oil per blue-whale unit
in the pelagic whaling 1963–64 and 1964–65.**
