P R E F A C E

This publication comprises the world aggregate whaling results for 1972, i.e. the catch of the Antarctic pelagic expeditions in the Southern Hemisphere in the 1971/72 season and the catch of other expeditions and shore stations during the calendar year 1972. For comparison with previous statistics, see Introduction.

Statistical data have not been received from Chile. Further statistical data relating to sex and size of whales killed have not been received from Spain, the Azores and Madeira.

Oslo, December 1973.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

As will be known, two separate numbers of the International Whaling Statistics are published each year, one of which covers the Antarctic catch (south of 40° S. Lat.). The other one comprises catches on whaling grounds outside Antarctic and also the Antarctic catch for the corresponding Antarctic season. The last mentioned publication therefore includes the total annual catches, referred to as the world catches. The International Whaling Statistics No. LXIX, for example, covers the world catches in 1971, which are the Antarctic catch (south of 40° S. Lat.) in the season 1970/71, and the catches on whaling grounds outside the Antarctic in the calendar year 1971.

In some of the seasons the Antarctic pelagic expeditions have caught a considerable number of sperm whales north of 40° S. Lat., mainly on their voyages to and from the Antarctic, but sometimes also in the Antarctic season. These catches have been specified for the following areas: South Atlantic Ocean (70° W. Long. — 20° E. Long.), Indian Ocean (20° E. Long. — 150° E. Long.), South Pacific Ocean (150° E. Long. — 70° W. Long.). The catches specified for these three areas in tables 1, 2 and 3 in International Whaling Statistics No. LXIX are therefore the catches made by Antarctic expeditions after the Antarctic season 1970/71 (contingently also during this season from the 1st of January 1971), and before the season 1971/72 (contingently also during this season until the 31st of December 1971).

At the annual meeting of the International Whaling Commission in 1972 it was agreed to that "The number of sperm whales taken in the Southern Hemisphere in the 1972/73 pelagic season and the 1973 coastal season shall not exceed 8,000 males and 5,000 females." This means that the catches of the Antarctic expeditions north of 40° S. Lat. shall refer to the Antarctic season, and not to the calendar year.

In the present publication (I.W.S. No. LXXI) corrections have been made accordingly. The catches specified for South Atlantic Ocean, Indian Ocean and South Pacific Ocean in tables 1, 2 and 3 therefore cover the catches made by Antarctic expeditions north of 40° South Lat. before and after the season 1971/72 (contingently also during the season). Under South Atlantic Ocean is in addition entered the catch of a combined catcher/floating factory ship which has not operated in the Antarctic.

Corresponding corrections have also been made for 1969, 1970 and 1971 (see introduction tables a to g and m, v, w). These tables are therefore in disagreement with the corresponding tables in earlier I.W.S. publications.

In the introduction tables some small corrections with regard to catch and production have been made due to information received after I.W.S. No. LXIX was published.

This publication comprises the world aggregate whaling results for 1972, i.e. the catch of the Antarctic pelagic expeditions in the Southern Hemisphere in the 1971/72 season and the catch of other expeditions/shore stations during the calendar year 1972.

Details of the catch of the Antarctic pelagic expeditions in the season 1971/72 will be found in publication No. LXX.

In the introduction to publication No. LXIX some unofficial catch figures for the combined catcher/floating factory ship "Run" were given (see page 7). These figures have now been confirmed and are repeated in table m 2 together with figures for the catch in 1972. "Run" was operated by the former owner, "Run Fishing Co." in January and February 1972 and caught 72 sei whales. Mid 1972 the ship was sold to Sierra Fishing Agency, and resumed operation in November 1972, and 76 sei whales were caught up to 31/12 1972.

The other small factory ship, "Sao Nicolau", mentioned in the same introduction has not been in operation in 1972. According to the owner of the ship only a few whales have been caught since 1970, which have been delivered to "Run". "Sao Nicolau" has mainly been used for freezing and transporting whale products for "Run".

Reports of the catch from Chile in 1968 and 1969 have now been received and are quoted in table u. No reports have been received for the catch in 1972.

Reports have also been received of the Spanish catch in 1971, and of the production of oil and other products from Peru in the same year.

From Ministerio de Pesqueria, Lima, Peru the following information has been received concerning sizes of whales caught in 1972.

Size in meters	Sei	Fin	Sperm	Total
10	12	—	747	759
11	20	—	523	543
12	107	—	177	284
13	143	—	53	196
14	48	—	33	81
15	7	—	16	23
16	—	—	1	1
17	—	4	—	4
18	—	5	—	5
Total	337	9	1,550	1,896

Two shore stations have suspended whaling in 1972, one of which operated in Norway and one in California.

Seven floating factories operated in the Antarctic in the season 1971/72, one of which caught minke whales only. Details of catch and production are given in International Whaling Statistics No. LXX.

In the North Pacific three Japanese and two U.S.S.R. expeditions operated in 1972. The set quota and the actual catch for the North Pacific for 1972 (excluding the catch in the East China Sea) were as follows:

	Fin whales	Sei/Bryde's whales	Sperm whales
Quota	1,046	3,768	10,841
The actual catch	724	2,528	6,323

The total quota was divided into national quotas.

The national quotas and the actual catch were:

	Japan		U.S.S.R.		U.S.A.	
	Quota	Catch	Quota	Catch	Quota	Catch
Fin whales	454	474	560	250	32	—
Sei whales	2,506	2,386	1,222	142	40	—
Sperm whales	4,608	4,587	6,173	1,736	60	—

The catch of fin whales respective to sei/Bryde's whales could be exceeded by not more than 10 % provided that an appropriate reduction was made in the catch of the other species. The Japanese catch of fin whales is thus 20 animals above the national quota, whilst the catch of sei/Bryde's whales is 120 below the quota. In addition the Japanese whaling companies caught 34 fin whales in the East China Sea.

At the 24th meeting of the International Whaling Commission it was agreed to request Denmark, U.S.A. and U.S.S.R. to obtain information on the aboriginal kill of bowhead, gray and other whales and report this to the Bureau of International Whaling Statistics.

In International Whaling Statistics No. LXIX, page 8 last paragraph, and page 9 first paragraph, some preliminary information from U.S. Department of State was quoted. More detailed information is given in a letter from Mr. Robert F. Hutton, Associate Director for Resource Management of U.S. Department of Commerce. This letter is quoted on page 27. No further information as to the catch in 1972 is available.

The U.S.S.R. aboriginal catch of gray whales in the Arctic zone of the Bering and Chukotsk Seas was 182 in 1972. The catch results for 1969,

1970 and 1971 were given in International Whaling Statistics No. LXIX, page 9 first paragraph.

According to information from the Ministry of Fishery of Denmark, the annual catch reports from Greenland and Faroe Islands sent to the Bureau of International Whaling Statistics comprise all catches of great whales as well as small whales.

The Marine Research Institute of Iceland has reported that 35 minke whales were caught in 1972, and that catch statistics for small whales are now being prepared. The Institute hope to be able to send the Bureau of International Whaling Statistics all necessary information in the future.

Tables Z²—Z¹¹ show catch of small whales from 1969. Table Z⁹ in publication No. LXIX showed "Catch of others or unspecified small whales". This table has been broken down to catch of "Narwhal" Z⁹, "Common Porpoises" Z¹⁰ and "Others or unspecified" Z¹¹. See also Z².

Letter dated
December 20th, 1972 from

U.S. Department of Commerce
National Oceanic and Atmospheric Administration
National Marine Fisheries Service
to
Bureau of International Whaling Statistics and
International Whaling Commission

Dear Sir:

This letter is in response to an inquiry by Mr. R. Stacey, Secretary to the International Whaling Commission, regarding the U.S. aboriginal kill of bowhead and small whales. As Mr. Stacey requested, we are sending the available data to you directly.

The enclosed tables were compiled by Dr. George Harry, Director of our Marine Mammal Division. They represent the best information available on the Eskimo take of bowhead whales (tables 1 and 2). These data are from unpublished records of Dale Rice, Dr. Floyd Durham, the late Don Foote, and from Maher and Wilimovsky, Annual Catch of Bowhead Whales by Eskimos at Point Barrow, Alaska, 1928—1960, *Journal of Mammalogy*, Vol. 44, No. 1. Recent catch data have come from Dr. Durham as a result of his decade of research on bowhead whales and Eskimo whaling in Alaska. No effort data or biological information are available at the present time although Dr. Durham has some of this information in the form of unpublished manuscripts.

In addition to bowhead whales, other cetaceans commonly taken by the Eskimos are the beluga and gray whales. No systematic record of the Eskimo take of either of these species is available. Some information on the take of beluga whales is included in reports by Saario and Kessel and Foote and Williamson in *Environment of the Cape Thompson Region, Alaska*, edited by Wilimovsky and Wolfe, United States Atomic Energy Commission, 1966. Dr. Durham has also provided information on the take of belugas at Wainwright in 1967. These data are included in table 3.

Dr. Durham estimates that the recent annual take of beluga whales in the following areas is:

Kotzebue	100	Wainwright	25
Point Hope	50	Barrow	10

John Burns, of the Alaska Department of Fish and Game, estimates that 80 to 270 belugas a year are taken with an average of about 150. John Burns' estimates include the kill at the mouth of the Kuskokwim and

Yukon Rivers, as well as the eastern part of Norton Sound area, which are not included in Dr. Durham's estimates.

Mr. Stacey also asked that we confirm that there was no U.S. catch of gray whales in 1970 and 1971. Almost every year a few gray whales are taken by Eskimos living in Alaska.

In 1970 John Burns reports that four gray whales were taken, one at St. Lawrence Island, one at Wales, and two from unknown locations; in 1971 three were taken, one in Norton Sound, one in Bering Strait, and one from an unknown location; and in 1972 one was taken at St. Lawrence Island. No biological information are available on these whales.

Sincerely,

Robert F. Hutton

Associate Director
for Resource Management
