P R E F A C E

This publication comprises the world aggregate whaling results for 1973, i.e. the catch of the Antarctic pelagic expeditions in the Southern Hemisphere in the 1972/73 season and the catch of other expeditions and shore stations during the calendar year 1973. For comparison with previous statistics, see Introduction to publication No. LXXI, page 7.

Statistical data have not been received from Chile. Further statistical data relating to size of whales killed have not been received from Spain, the Azores and Madeira.

Oslo, December 1974.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

This publication comprises the world aggregate whaling results for 1973, i.e. the catch of the Antarctic pelagic expeditions in the Southern Hemisphere in the 1972/73 season and the catch of other expeditions/shore stations during the calendar year 1973.

Details of the catch of the Antarctic pelagic expeditions in the season 1972/73 will be found in the publication No. LXXII.

Three shore stations have suspended whaling in 1973, two of which operated in Newfoundland and one in Nova Scotia.

In the North Pacific three Japanese and three U.S.S.R. pelagic expeditions and eight Japanese shore stations operated in 1973.

The set quota and the actual catch for the North Pacific for 1973 (excluding the catch in the East China Sea) were as follows:

	Fin whales	Sei/Bryde's whales	Sperm whales	
		Males	Females	
Quota	650	3,000	6,000	4,000
The actual catch	446	2,585	4,606	3,962

The total quota was divided into national quotas. The national quotas and the actual catch were:

	Japan	Catch	U.S.S.R.	Catch
Quota			Quota	
Fin whales	291	285	359	161
Sei/Bryde's whales	2,017	1,826	983	759
Sperm whales				
Males	2,565	2,560	3,435	2,046
Females	1,710	1,679	2,290	2,283

In addition 14 fin whales were caught in the East China Sea by Japanese expeditions.

Of the total catch of "sei/Bryde's whales" 1,856 were sei whales and 729 Bryde's whales.

The number of sperm whales to be taken in the Southern Hemisphere in the 1972/73 pelagic season and the 1973 coastal season should according to Schedule 8 h (Schedule dated December 1972) not exceed 8,000 males and 5,000 females. This quota was allocated into national quotas as follows:

	Males	Females	Total
Japanese and U.S.S.R. pelagic expeditions	6,200	3,590	9,790
South African shore station	900	905	1,805
Australian shore station	900	505	1,405
	8,000	5,000	13,000

The catch of sperm whales amounted to:

	Males	Females	Total
Japanese and U.S.S.R. pelagic expeditions	5,442	3,297	¹⁾ 8,739
South African shore station	860	746	1,606
Australian shore station	684	287	971
	6,986	4,330	11,316

Regarding the quota and the catch of Japanese and U.S.S.R. pelagic expeditions details will be found on page 8 of publication No. LXXII.

The report from Peru uses the following names for baleen whales: "Ballena Fin", "Ballena Boba O.Sei" and "Ballena Br.". The last mentioned species has in the tables been entered under Bryde's whale, but it is hoped to have this presentation checked later on.

The Bureau of International Whaling Statistics has got copy of a table from Yearbook of Fishery Statistics, published by the Office of Fisheries, Republic of Korea (Seoul), showing the Korean catches during the years 1962—1970. According to said table the catch has been as follows:

	«Large whaling»	«Small whaling»	Total
1962	82	170	252
1963	55	291	346
1964	88	384	472
1965	17	249	266
1966	14	309	323
1967	20	336	356
1968	28	316	344
1969	35	386	421
1970	606	134	740

According to information received "large whaling" is conducted from only one shore station at Ulsan on the east coast, whereas "small whaling" is apparently conducted from several ports. The "small whale" fishery takes almost exclusively minke whales. The "large whale" fishery takes a few fin whales and an occasional humpback whale.

¹⁾ Excluding 4 whales lost.

A table has also been received showing the catch from Republic of Korea "by month and by species, 1970". The catches in 1970 are shown below:

Total	740
"Large whaling":	606
Fin whale	25
Sei whale	—
Others (Minke whale)	581
"Small whaling":	134
Humpback whale	—
Minke whale	134

As will be seen from the table "large whaling" also accounted for 581 minke whales in 1970.

The Bureau of International Whaling Statistics is trying to get further statistics on Korean whaling.

In the introduction to publication No. LXIX (page 9), a preliminary report on the incidental kill of small cetaceans in the U.S. tuna fishery was quoted.

From Department of State revised "Estimates of the kill of Delphinids incidental to the U.S. tuna fishery" have now been received, and quoted below:

"Those data on which earlier (1970—71) estimates of the incidental kill of porpoises in the tuna fishery* were based, has been re-examined, corrected, and revised on the basis of more valid statistical procedures. However, these revised numbers, as well as those for 1972, should still be considered preliminary pending further analysis.

The 1972 estimates given below are based on counts from twenty observer trips within the regulatory area of the IATTC [Inter-American Tropical Tuna Commission]. Total mortality of the three principal species involved in the fishery were calculated from percentages as observed in the samples.

The 1970—71 revised figures and those for 1972 are:

	Year	Estimated numbers killed		
		1970	1971	1972
Spotted porpoise (<i>Stenella attenuata</i>)	160,000	124,000	178,000	
[Spotted dolphin (<i>Stenella graffmani</i>)]				
Spinner porpoise (<i>S. longirostris</i>)	48,000	38,000	42,000	
[Spinner dolphin]				
Whitebelly porpoise (<i>Delphinus delphis</i>)	6,000	5,000	8,000	
[Common dolphin]				
Estimated totals	214,000	167,000	228,000	

* Report of the NOAA Tuna Porpoise Review Committee, 8 Sept. 1972.»

If the tuna fishery outside the regulatory area is included, the mortality estimates may increase by 30 per cent or more.

A detailed description of the statistical methods used will be presented in a "Progress Report" now under preparation. The estimated number of porpoises killed are from a preliminary draft of that report by Stauffer and Smith of the SWFC [Southwest Fisheries Center, National Marine Fisheries Service].»

Department of State writes in a letter dated April 12, 1974:

"The only small cetaceans killed by aborigines are belugas. There are no accurate statistics on this kill for recent years, but for 1974 and future years United States Government hopes to gather such statistics."

The Danish Commissioner to the 1973 meeting of the Commission has supplied the Commission with the latest available "Greenland Hunting Statistics" which cover the period 1965—1969. The figures given differ to some extent from earlier information in the International Whaling Statistics. Tables Z² and i show the corrected figures for the Greenland catch of small and large whales respectively in the period 1965—1969.

The following quotation refers to the Introduction to "Greenland Hunting Statistics":

In «Summary of Hunting Statistics for Greenland, 1969» the number of catches of large marine and terrestrial mammals and of shark (the Greenland shark) have been recorded. Moreover, the Summary shows the purchases made by the Royal Greenland Trade Department of Greenland game hunting products, fish products, and sheep farming products.

The results have been taken from hunting lists kept at the various settlements by a recorder appointed for that purpose by the local council. Up to and including March 31st, 1969, hunting lists have been kept for the period April 1st through March 31st (the following year). Considering that the hunting lists are in future to follow the calendar year, the lists commenced on April 1st, 1969, were to be kept for only nine months up to and including December 31st, 1969, from which date the new lists have been used. The results for 1969, therefore, have been taken from two sets of hunting lists, the period January 1st through March 31st being covered by the 1968/69 hunting list material, and the period April 1st through December 31st by the hunting lists for 1969.

As the material from Thule is incomplete and no material has been received from Scoresbysund, the result stated for these municipalities is based on the Royal Greenland Trade Department's figures for purchases of skin. For all species, the figures given by the Royal Greenland Trade Department are lower than actual catches, seeing that the hunters first supply their own needs and then sell from what they have left over.

From West Greenland and Angmagssalik the Summary includes 3,466 hunting lists for 1969, compared with 3,576 for 1968 and 3,137 for 1967.

For small whale statistical purposes, Canada has subdivided her arctic waters into three bio-geographical areas:

Western Arctic
Eastern Arctic
Hudson and James Bays

A further statistical area has been designated, the St. Lawrence River. To conform to these areas, Canada has revised her small whale statistics for the period 1951 and onwards. These revised statistics are printed in tables Z⁷ and Z⁹. The annual period of catch is July to October inclusive without any refinement as to the catch for individual months. The catch figures do not include sinking losses which are estimated to be 50 % for narwhal but significantly less for white whales.

The revised statistics differs considerably from figures previously reported to the Bureau of International Whaling Statistics. These figures are printed in International Whaling Statistics No. XLIII and the subsequent uneven numbers of International Whaling Statistics.

Total	2,616	6,374	1,051	15	22,073	223	32,352	859,296	14	13	181	

¹⁾ Blue whales taken under special permit. ²⁾ In addition 5,745 minke whales, 27 bottlenoses and 15 killer whales. See tables Z³—Z¹¹. ³⁾ Inclusive oil from small whales. ⁴⁾ Of which 1 floating factory with 4 catchers caught minke whales only. ⁵⁾ In addition 173 minke whales, 8 killer whales and 2 goose beaked whales. See tables Z²—Z¹¹. ⁶⁾ In addition 650 minke whales. See tables Z² and Z³. ⁷⁾ No information. ⁸⁾ Calculated. ⁹⁾ Right whales — aboriginal catch. ¹⁰⁾ Gray whales — aboriginal catch. ¹¹⁾ Antarctic expeditions before and after the Antarctic season 1972/73. ¹²⁾ Combined catcher/floating factory. ¹³⁾ In addition 2 minke whales. ¹⁴⁾ Operated also in South Atlantic Ocean. ¹⁵⁾ Right whale.
