P R E F A C E

This publication comprises the world aggregate whaling results for 1974, i.e. the catch of the Antarctic pelagic expeditions in the Southern Hemisphere in the 1973/74 season and the catch of other expeditions and shore stations during the calendar year 1974. For comparison with previous statistics, see Introduction to publication No. LXXI, page 7.

Statistical data have not been received from Chile, the Azores and Madeira. Further statistical data relating to size of whales killed have not been received from Spain.

Oslo, December 1975.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

This publication comprises the world aggregate whaling results for 1974, i.e. the catch of the Antarctic pelagic expeditions in the Southern Hemisphere in the 1973/74 season and the catch of other expeditions/shore stations during the calendar year 1974.

Details of the catch of the Antarctic pelagic expeditions in the season 1973/74 will be found in the publication No. LXXIV.

In the North Pacific three Japanese and two U.S.S.R. pelagic expeditions and seven Japanese shore stations operated in 1974.

The set quota and the actual catch for the North Pacific for 1974 (excluding the catch of fin whales in the East China Sea) were as follows:

	Fin whales	Sei/Bryde's whales	Sperm whales	
		Males	Females	
Quota	550	3,000	6,000	4,000
Actual catch	411	2,643	4,419	3,708

The total quota was by agreement between Japan and U.S.S.R. divided into national quotas. The national quotas and the catches were:

	Japan Quota	Catch	U.S.S.R. Quota	Catch	Total Quota	Catch
Fin whales	246	238	304	173	550	411
Sei/Bryde's whales .	2,017	1,947	983	696	3,000	2,643
Sperm whales						
Males	2,565	2,536	3,435	1,883	6,000	4,419
Females	1,710	1,628	2,290	2,080	4,000	3,708
Total sperm whales	4,275	4,164	5,725	3,963	10,000	8,127

In addition 2 fin whales were caught in the East China Sea.

According to paragraph 15 of the Schedule to the International Convention (May 1974) "The Number of sperm whales taken in the Southern Hemisphere in the 1973/74 pelagic season and the 1974 coastal season shall not exceed 8,000 males and 5,000 females."

This quota was by agreement between Japan, U.S.S.R., South Africa and Australia allocated into national quotas as follows:

	Males	Females	Total
Japanese and U.S.S.R. pelagic expeditions	6,200	3,590	9,790
South African shore station	900	905	1,805
Australian shore station	900	505	1,405
	8,000	5,000	13,000

The actual catch of sperm whales amounted to:

	Males	Females	Total
Pelagic expeditions 1973/74			
South of 40° South	3,693	1,234	4,927
North of 40° South	1,472	1,915	¹⁾ 3,388
South African station 1974	882	899	²⁾ 1,783
Australian shore station	630	449	1,079
	6,677	4,497	11,177

1) Inclusive one lost. 2) Inclusive two lost.

Details of the catch south of 40° South will be found in publication No. LXXIV.

From Ministerio de Pesqueria, Peru, the following table showing length frequencies in meters of the Peruvian catch of whales in 1974 has been received:

Length Meters	Sei	Fin	Bryde's	Sperm
9	—	—	—	439
10	—	—	—	489
11	77	—	9	288
12	83	—	37	42
13	88	—	87	14
14	70	—	37	3
15	25	1	4	10
16	3	1	—	1
17	1	2	—	—
18	—	1	—	—
Total	347	5	174	1,286

On pages 8 and 9 of publication No. LXXIII tables were printed showing the catches of large whales and small whales from the Republic

of Korea from 1962 up to and including 1970. Further statistics on Korean whaling have not so far been received.

In the introduction to publication No. LXIX (page 9) and LXXIII (page 9) preliminary reports on the incidental kill of small cetaceans in the U.S. tuna fishery were quoted. Estimates of the kill of delphinids incidental to the U.S. tropical Pacific tuna Fishery provided by the United States Department of Commerce have been received from the secretary of the International Whaling Commission and are quoted below:

"These data on which earlier (1971—73) estimates of the incidental kill* of porpoises in the tuna fishery were based have been re-examined, corrected and revised on the basis of more valid statistical procedures. However, these revised numbers, as well as those for 1974, should be considered preliminary pending further analysis. We are no longer estimating incidental kill of porpoises in 1970 because of insufficient data.

The 1974 estimates given below are based on counts from 36 observer trips. All estimates of the kill outside the IATTC regulatory area, which has not been sampled, are based on the assumption that incidental kill per set is the same within and outside the regulatory area. Species compositions of the total incidental kill are based on percentages as observed in the samples and the assumption that no common dolphins are incidentally killed outside the regulatory area.

The 1971—74 estimates of incidental kill* (thousands of animals) by the U.S. Tuna Fishery are:

Species	Within Regulatory Area				Outside Regulatory Area			
	1971	1972	1973	1974	1971	1972	1973	1974
Spotted Dolphin (<i>Stenella attenuata</i>)	129.1	173.6	59.1	39.7	51.6	66.0	37.4	23.3
Spinner Dolphin (<i>Stenella longirostris</i>)	90.8	41.4	37.1	20.0	36.5	15.6	23.5	11.3
Common Dolphin (<i>Delphinus delphis</i>)	4.1	7.6	17.6	3.2	0.0	0.0	0.0	0.0
Others	0.2	0.3	0.2	0.2	0.1	0.1	0.2	0.1
Total	224.2	222.9	114.0	63.1	88.2	81.7	61.1	34.7

* The incidental mortality estimates are for only the observable kill and are not adjusted for injured animals which may die subsequently or any other direct or indirect mortality."

Tables Z²—Z¹¹ show the catches of small whales including the catches of small whales by the Antarctic pelagic expeditions.

¹⁾ See Introduction. ²⁾ Data incomplete. ³⁾ According to International Fisheries and Marine Directorate represent all figures confirmed landings. Totals do not include abandoned animals and cripple losses. Realistic totals would be obtained by multiplying the narwhal numbers by 2 and the beluga numbers by 1.5 e.g. 582 narwhal and 764 beluga. See also Introduction to No. LXXIII page 11. ⁴⁾ See introduction and page 9 Nos. LXIX and LXXIII.

Table 7.—Average production of oil per “blue whale unit” in 1974.

Other whales are reduced to blue whale equivalents on the following basis:
 1 blue whale = 2 fin whales = 2½ humpbacks = 6 sei whales = 2 grey whales =
 6 Bryde's whales.

Geographical areas.	Company.	Blue whale equivalents.	Oil production.	
			Total.	Average per blue whale equivalent.
