## INTRODUCTION

In the "International Whaling Statistics" VI we are submitting general statistics of the catch for the season 1933-34 and the summer 1934. We have not succeeded in obtaining the results for Chile for 1934, but have this year got information of the catch outside Kamtchatka, British Columbia, and California. There has been no information available of the species of whales caught outside Alaska, British Columbia and California.

In Table No. 1—5 are given the results of the whaling in 1933-34 and summer 1934, specified for the different species of whales, areas, and countries. In Table No. 6, 7, and 8 are given the sizes of whales caught, in Table No. 6 by companies and areas, in Table No. 7 the whales are classified by English feet, and in Table No. 8 the whales are grouped according to size and mature and immature whales. In Table No. 9 is given the average production of oil per whale for different areas. In Table No. 10 is given the measurement of whale foetuses for the floating factories in the Antarctic. In Table No. 12 the whale foetuses are classified by groups of size in each month, specified for blue-whales, fin-whales, and humpbacks.

As mentioned in the "International Whaling Statistics" V the hunting in 1933-34 has been restricted through a production agreement concluded between most of the companies taking part in the Antarctic whaling. Outside this agreement were in this season two British and one Norwegian company, which according to Table No. 9, page 21, had an oil production of 344,521 barrels. The companies adjoined the production agreement had a production of 1,878,764 barrels.

The new Norwegian law of June 26th 1934 authorizes the Crown to restrict the hunting season for whales. According to this law the hunting season in the Antarctic has been restricted to the period from December 1st to March 31st, both days included. This restriction will have influence on the hunting in the season 1934-35. The output of oil in the Antarctic in this season was according to a preliminary survey, published in the Norwegian Whaling Gazette, April 1935, page 50: 2,400,293 barrels.

---

In "International Whaling Statistics" has been published tables showing the whales caught by species, sex and size. This statistics has

shown that in the Antarctic as a whole there have been killed more males than females. In order to give a survey of the results of the classification by sex, we have in the following table given the figures for a series of years.

Table a.

Kind of whale and whaling grounds.	1933-1934.	1932-1933.	1931-1932.	1930-1931.	1929-1930.
<b>Blue-whales.</b>

	Total animals .....	16,792	18,580	5,442	23,916
	Males per 100 females ...	123	109	119	114
<i>South Georgia and Deception</i>	Males.....	223	111	216	700
	Females .....	311	155	222	614
	Total animals .....	534	266	438	1,314
	Males per 100 females ...	72	72	97	114
<i>Coast of Africa</i>	Males.....	-	-	-	-
	Females .....	-	-	-	-
	Total animals .....	-	-	-	-
	Males per 100 females ...	-	-	-	-
<b>Fin-whales.</b>					
<i>Antarctic, pelagic whaling</i>	Males.....	2,856	2,363	547	4,216
	Females .....	2,615	2,071	396	3,075
	Total animals .....	5,471	4,434	943	7,291
	Males per 100 females ...	109	114	138	137
<i>South Georgia and Deception</i>	Males.....	895	345	953	813
	Females .....	833	376	780	899
	Total animals .....	1,728	721	1,733	1,712
	Males per 100 females ...	107	92	122	90
<i>Coast of Africa</i>	Males.....	-	-	-	-
	Females .....	-	-	-	-
	Total animals .....	-	-	-	-
	Males per 100 females ...	-	-	-	-

From this table we learn that the sex proportion of whales killed is not the same for all areas. In that part of the Antarctic where pelagic whaling is carried on there are more males killed than females both of blue-whales and fin-whales. The whaling at South Georgia and Deception shows more female blue-whales killed than males in all years except 1930-31. As to the fin-whales in these areas there are killed more males than females in 3 seasons and more females than males in 2 seasons. Considering the hunting in the Antarctic as a whole, the number of males killed in all years exceeds the number of females for both blue-whales and fin-whales. Mr. Risting has drawn the attention to this in different articles in the

Norwegian Whaling Gazette, where he also has published figures for more years than inserted in the present table. He has also asked the whaling companies to state the sex of those whale *foetuses* which are measured. For the last season he has succeeded in getting the sex stated for 1,540 blue-whale foetuses, 753 fin-whale foetuses and 66 humpback foetuses. Of the 1,540 blue-whale foetuses 827 were males and 713 females, which gives 116 males per 100 females. In the different months the distribution of the whale foetuses according to sex was the following:—

	Males.	Females.	Total.	Males per 100 females.
October .....	38	24	62	158
November .....	208	181	389	115
December .....	292	234	526	125
January .....	180	174	354	103
February .....	82	77	159	106
March .....	27	23	50	117
Total	827	713	1,540	116

This shows that there in all months were more males than females. The returns from each expedition separately gave the same result.

Of the 753 fin-whale foetuses 387 were males and 366 females. It was thus 106 males pr. 100 females. For the different months the distribution of the foetuses by sex was the following:—

	Males.	Females.	Total.	Males per 100 females.
October .....	—	2	2	—
November .....	2	3	5	67
December .....	35	31	66	113
January .....	183	149	332	123
February .....	134	145	279	92
March .....	33	36	69	92
Total	387	366	753	106

The number of foetuses recorded for the fin-whales was not very large, and it is of course impossible to base any conclusion as to the difference between the sex composition of the blue-whale and the fin-whale foetuses on the returns for a single year and the comparatively small samples for the fin-whale foetuses. Of the 66 humpback foetuses 36 were males and 30 females.

In Table b is given the number of whales caught on the different areas from 1919–20 to 1933–34.

Table b.

Years.	All areas.	Antarctic.	Arctic.	Africa.	Pacific, north.	Japan.	Others.
1919-20	11,369	5,441	1,456	1,310	1,763	1,279	120
1920-21	12,174	8,448	310	1,263	129	1,487	537
1921-22	13,940	7,023	918	2,335	1,356	1,506	802
1922-23	18,120	9,910	1,204	3,105	1,363	1,422	1,116
1923-24	16,839	7,271	1,667	3,649	1,102	1,526	1,624
1924-25	23,253	10,488	1,523	4,384	1,892	1,875	3,091
1925-26	28,193	14,219	1,588	4,646	1,804	2,148	3,788
1926-27	24,175	12,665	1,403	4,144	2,064	1,546	2,353
1927-28	23,524	13,775	1,561	3,835	1,412	1,607	1,334
1928-29	27,896	20,341	1,159	3,362	1,241	1,463	330
1929-30	37,674	30,167	1,472	3,498	975	1,312	250
1930-31	42,874	40,201	703	823	-	1,147	-
1931-32	12,797	9,572	827	1,043	319	1,036	-
1932-33	28,668	24,327	1,257	1,168	591	<sup>1)</sup> 1,325	-
1933-34	32,167	26,087	894	2,392	1,019	<sup>2)</sup> 1,775	-

<sup>1)</sup> 203 whales caught off Kamtchatka are included. <sup>2)</sup> 339 whales caught off Kamtchatka are included.

This table shows that the catch in all areas in 1933-34 was 32,167 whales, which is the largest number of whales killed in any year but two (1930 and 1931). In the last season the catch according to the table has gone up with 3,499 whales. This rise in the number of whales killed is partly due to the larger catch in Antarctic, where there were killed 1,760 more whales this season than in the preceding. The catch off Africa has gone up in the three last seasons. The catch in the Pacific North and in Japan was also larger in the last season than in the preceding. On the other hand there were killed fewer whales in the last season in the Arctic.

A survey of the total oil production from 1919-20 to 1933-34 is given in Table c.

Table c.

	2,573,155	12,930	2,395,544	19,012	17,218	1,324	82,359	3,922	80.0	91.8

<sup>1)</sup> Barrel =  $\frac{1}{6}$  ton (1 ton = 1,016 kg.).

The total oil output in 1933–34 was 2,573,155 barrels, which is about 24,000 barrels less than in the season 1932–33. As mentioned above the number of whales killed was larger in 1933–34 than in 1932–33, which shows that the oil output per whale was less in the last season than in the preceding. From Table c we also learn that the oil output per boat was less in the last season than in the preceding.

In Table d is given a specification of the number of whales caught in the Antarctic by species.

**Table d.—Antarctic.**

Years.	Species of whales caught.							Oil production.	Expeditions.			Number of whales per boat.
	Blue.	Fin.	Hump-back.	Sei.	Sperm.	Others.	Total of whales.		Shore stations.	Floating factories.	Catchers.	
1919–20	1,874	3,213	261	71	8	1) <sup>1)</sup> 14	5,441	Barrels. 272,817	6	6	44	124

1933–34	17,349	7,200	872	—	666	—	26,087	2,395,544	2	19	126	207

<sup>1)</sup> Right-whales.

From this table we learn that the catch of blue-whales in 1933–34 was smaller than in the preceding season, but also that the catch has only been larger in 3 of the former seasons. The catch of fin-whales has gone up and the catch of humpbacks was the largest one which is recorded in the Antarctic since the war. We also note a comparatively larger catch of sperm-whales. The number of whales caught per boat was a little higher than in the preceding season and the highest one recorded in the years after the war.

The species of the whales caught by the whaling companies at South Georgia, which is the oldest hunting ground in the Antarctic, are given in Table e.

In these areas the blue-whale catch in the years since 1930–31 has been of minor importance. The average yield per boat, which in the preceding seasons was smaller for South Georgia than in the other parts of the Antarctic, was in the last season a little higher.

Table e.—South Georgia.

Years.	Species of whales caught.							Oil production.	Expeditions.			Number of whales per boat.	
	Blue.	Fin.	Hump-back.	Sei.	Sperm.	Others.	Total of whales.		Shore stations.	Floating factories.	Catchers.

1) Barrel =  $\frac{1}{6}$  ton (1 ton = 1,016 kg.).

The Norwegian and British whaling is by far the most important. Of these two countries Norway has had the lead up to 1931-32. In this year the Norwegian whaling fleet, which carries on whaling in the Antarctic, was laid up and the Norwegian catch was thus of little importance this year.

In 1932-33 the output of Norwegian and British whaling was on the same level. In the last season the number of whales caught by British whaling was higher than the number of whales caught by Norwegian whaling. The Norwegian whaling had, however, a larger output of oil than the British whaling.

In order to show the degree of the utilisation of the whales in the later years, compared with former years, the figures of the average production of oil per blue-whale unit for South Georgia and other grounds in the Antarctic, are given in Table g.

**Table g.—Average production of oil per blue-whale unit.<sup>1)</sup>**

Years.	South Georgia.	Other grounds in Antarctic.	Years.	South Georgia.	Other grounds in Antarctic.
	Barrels. <sup>2)</sup>	Barrels.		Barrels.	Barrels.
1924-25.....	87.5	85.0	1929-30.....	110.7	109.6
1925-26.....	84.0	84.8	1930-31.....	100.1	105.6
1926-27.....	96.4	91.1	1931-32.....	92.9	102.6
1927-28.....	106.4	92.8	1932-33.....	86.5	114.6
1928-29.....	108.2	98.3	1933-34.....	91.8	111.9

<sup>1)</sup> Other whales are reduced to blue-whale equivalents on the following basis:— 1 blue-whale = 2 fin-whales =  $2\frac{1}{2}$  humpbacks = 6 sei-whales. <sup>2)</sup> Barrel =  $\frac{1}{6}$  ton. (1 ton = 1,016 kg.).

The average production of oil per blue-whale unit the last season was 91.8 barrels in South Georgia and 111.9 in other parts of the Antarctic. It has, as the table shows, been higher in South Georgia and lower in the other parts of the Antarctic than in the preceding season. For the companies adjoining the production agreement the production of oil per blue-whale unit was 117.6 in the season 1932-33 and 115.7 in the season 1933-34. For the other companies the average yield in the preceding season was 99.95, in the last season 94.9.

The average size of blue-whales and fin-whales for a series of years is given in Table h.
