P R E F A C E

As for the three previous seasons the committee presents the whaling statistics also for the season 1938–39 in two separate publications.

In the present publication, International Whaling Statistics XIV, we give the figures for the whaling in the *Antarctic* in the season 1938–39. The statistics for the whaling in other parts of the world will be published in spring 1940 together with the principal figures for the Antarctic.

Oslo, December 12, 1939.

INTRODUCTION

WHALING IN ANTARCTIC 1938-39

During the season 1938-39 whaling operations in the Antarctic were restricted through the international agreement, signed in London on June 8th 1937 by the following States: The South African Union, The United States of America, Argentine, the Commonwealth of Australia, Germany, Great Britain and North Ireland, Ireland, New Zealand and Norway. This convention for the regulation of whaling has, according to the information obtained, been ratified by the following States in the following order:—

U.S.A., September 3rd 1937,—Great Britain, October 25th 1937,—Norway, October 29th 1937,—Germany, November 5th 1937,—Ireland, April 1938.—Canada have acceded to the agreement of 1937 and agreed to its extension (June 14th 1938).—Mexico have acceded to the agreement of 1937 and agreed to its extension under Article 21 (May 7th 1938).—New Zealand have ratified the agreement of 1937 and agreed to its extension.—Denmark have acceded to the agreement of 1937 and the protocol of 1938 as from 10th of July 1939. According to information received, the Japanese expeditions started whaling in the season 1939-40 about December 8th.

According to article 7 of the Convention the catching season for baleen whales is limited in any waters south of 40° South lat. to the period December 8th 1938 to March 7th 1939, both days included. In pursuance of the articles 4 and 5 of the Convention, it is forbidden to take or kill grey whales and/or right-whales, and to take or kill any blue-, fin-, humpback- or sperm-whales below the following lengths:—

Blue-whales.....	70 feet
Fin-whales.....	55 "
Humpbacks.....	35 "
Sperm-whales	35 "

The International Conference, held in London in June 1938, introduced some amendments to the Agreement of June 8th 1937. The principal amendments were:

Prohibition against the killing of humpbacks in all waters south of 40° South Lat. (Article 1).

Total protection for a period of 2 years from December 8th 1938 in waters south of 40° South Lat. from 70° West Longitude westwards as far as 160° West Longitude (Article 2).

¹⁾ Right-whales.

The attempt at reducing the number of whaling boats per floating factory, during the negotiations in London, failed, and an appeal by the Norwegian Association of Whaling Companies sent on June 28th to all the companies excepting the German, German-chartered and Japanese, proposing such limitation, met with no success. Meetings of the parties concerned were held, but it was impossible to arrive at an agreement.

As in the previous season Japan carried on whaling in the Antarctic in 1938-39 entirely unimpeded by restrictions. An appeal from different quarters to refrain from taking humpbacks was, however, accepted by the Japanese Government. One of the Japanese expeditions ceased their humpback catch at the end of January and the others in the first days of February 1939. The Japanese expeditions started whaling on the first days of November 1938 and carried on till March 15th 1939.

As mentioned in the earlier publications of International Whaling Statistics, whaling operations have been restricted since 1932-33. During the seasons 1932-33 and 1933-34 whaling was restricted through production agreements concluded between most of the companies. During the season 1934-35 the catch was restricted to the period December 1st to March 31st, during the season 1935-36 to the period December 1st to March 15th, during the season 1936-37 to the period December 8th to March 7th, during the season 1937-38 to the period December 8th to March 15th and during the season 1938-39 to the period December 8th to March 7th. During the season 1935-36 there was

¹⁾ For the seasons 1919/20—1930/31 the catch in the Ross Sea and from South Shetland and South Orkney is included in the figures for pelagic whaling in the Antarctic. ²⁾ Right-whales.

also a production agreement (see Introduction—Intern. Whaling Statistics No. VII, page 2), and during the season 1936-37 whaling in the Antarctic was restricted through an agreement between Norway and England, deciding i.a. a limitation as to the number of whaling boats (see Introduction—Intern. Whaling Statistics, No. X, page 3). These restrictions were in force for most of the companies taking part in the pelagic whaling in the Antarctic in these years. Particulars as to the exceptions in earlier seasons are given in the previous volumes of International Whaling Statistics.

In table *a*, page 4, are given the figures for the whaling in the Antarctic for each of the seasons 1919-20 to 1938-39. As a consequence of the different time restrictions and production agreements in every whaling season since 1932-33, these figures are not strictly comparable.

Since 1932-33, the whaling equipment measured by catchers, as will be seen from the table page 4, has increased from year to year. Last season 34 floating factories and 2 shore stations operating with 281 catchers took part in the whaling in the Antarctic. This constitutes a record for the last 8 years and exceeds the participation of last season by 3 floating factories and 25 catchers. The number of catchers is the largest ever recorded.

It is, therefore, noteworthy, that the number of whales killed has decreased by 7,683 animals, from 46,039 whales during 1937-38 to 38,356 during 1938-39, and that the oil production has declined by 519,559 barrels, from 3,340,330 barrels to 2,820,771 barrels.

Table c.—Number of whales per boat for pelagic whaling in the Antarctic.

1930–31....	182.8
1931–32....	223.3
1932–33....	208.3
1933–34....	206.3
1934–35 ...	211.4
1935–36....	177.0
1936–37....	178.0
1937–38....	181.0
1938–39....	136.0

In order to throw a clearer light on the data stated above, we have given separate figures for the pelagic whaling in the Antarctic and the whaling off South Georgia. The particulars of the pelagic whaling in the Antarctic are given in table b, page 5.

As the pelagic whaling in the Antarctic represents the predominant part of the total proceeds on these grounds during the last seasons, the figures recorded closely correspond to those recording the total catch for the same period, i. e. a record number of catchers—270, but a considerable decrease in the number of whales killed as well as in the output of oil as compared to that of the previous season. The figures are, nevertheless, very high and apart from the record reached last year, only the catch of 1930–31 is greater in comparison.

If, however, we compare the number of whales killed with the number of catchers operating in the Antarctic, there is a considerable decrease in the yield of whaling.

Table c, above shows the average number of whales killed per boat for a series of years for pelagic whaling in the Antarctic.

We observe a considerable drop in last season's catch per boat—from 181 in 1937–38 to 136 in 1938–39—the lowest result ever recorded.

During the period 1930/31—1938/39 the development with regard to the efficiency of the catchers has been great, and the figures calculated on the basis of number of catchers are not strictly comparable. Also the varying length of the whaling season in later years makes it difficult to draw definite conclusions from the figures. The drop for the last season, however, as compared to the previous one, is so great that we might be allowed—experience from other hunting grounds taken into consideration—to state that the drop gives an indication as to the overtaxation of the stock on the Antarctic grounds.

Looking at the species of whales killed, we find a decrease in the number of blue-whales, from 14,826 animals for 1937–38 to 13,849 for 1938–39, a drop of 6.6 per cent. As far as the fin-whale is concerned, the figures show a decline from 26,457 animals killed during the 1937–38 season to 19,477 for 1938–39, a drop of 26.4 per cent. In accordance with the amendments introduced at the International Whaling Conference held in London in June 1938, the humpbacks were completely preserved in all waters south of 40° South Lat., and the entire

catch of this species for the last season, which refers to the Japanese operations, amounted to only 883 animals, as against 2,039 for the previous season. The sei-whale is of no importance as far as the pelagic whaling is concerned. On the other hand, last season shows a marked increase in the number of sperm-whales killed, 2,468 as compared to 824 for the season 1937-38—an increase of about 200 per cent. This excessive killing of sperm-whales must be mainly attributed to the scarcity of blue-whales and fin-whales present on the hunting grounds as well as to the preservation of humpbacks.

As in earlier volumes of International Whaling Statistics we have given the catch of the different species by months. The absolute and percentage figures for 1938-39 and previous seasons are stated in the tables *d* and *e* on pages 7 and 8.

As previously emphasized, a direct monthly comparison cannot be made from year to year because of the varying whaling periods and different agreements relating to the killing of whales. In fact, as far as the later years are concerned, only the months of January and February can be directly compared.

It will appear from table *d*, that the number of blue-whales killed last season is greater than during the previous season for November, January and February, and that the decrease in the total catch is principally due to the considerable drop during December. During December 1938 only 5,124 blue-whales were killed as against 6,873 for the same month in 1937, although a greater number of catchers were participating, even during the first 8 days of December 1938 than in 1937. The increase in the blue-whale catch in January and February was 494 and 317 respectively, or 11.2 and 15.5 per cent, while the increase in catchers present on the whaling grounds during these months was 26 or 10.7 per cent.

As far as the fin-whale is concerned, the figures show a contrary development for the last season. We find an increase for December 1938, 3,605 as against 3,210 for the previous December, while there is a considerable decrease in the catch for the months of January, February and March.

This decrease might be a consequence of the slaughtering of fin-whales during the preceding season. The decrease in March is, however, also a consequence of the shortening of the season, from March 1-15, 1938, to March 1-7, 1939. As, however, the shoals of fin-whales present on the whaling grounds at the ice barriers vary considerably from one year to another, no definite conclusion can be drawn from the figures for these two seasons.

As previously mentioned, the preservation of the humpbacks has reduced the catch from 2,039 animals during 1937-38 to 883 for the 1938-39 season. The humpback figures consequently show a decrease for all the months compared with last season. The decrease is the greater for January and February. On the other hand the catch of sperm-whales shows a considerable increase for every month of the season.

As will be seen from table *e*, the percentage of the blue-whales in relation to the total catch has decreased for a series of years. During the last season, however, the blue-whales represent a greater percentage of the total catch than in 1937-38—37.8 per cent as against 33.5 per cent, an increase which is insignificant and only a consequence of the decrease in the fin-whale catch. The percentage of fin-whales has decreased as compared with the previous season from 59.9 to 53.1 per cent.

Table *f*, on page 10, comprising the number of immature and mature blue- and fin-whales killed, has been extended to include also humpbacks. According to the Discovery Reports the humpback male reaches maturity when 39 feet in length and the female when 41 feet. It will appear from the table that the percentage of immature blue-whales killed increased slightly, from 28.49 per cent in 1937-38 to 30.83 per cent for 1938-39. The variations in the percentage of immature blue-whales killed have altogether been very small since 1934-35.

As regards the fin-whale the percentage of immature animals killed has increased to a greater extent, from 15.83 per cent for 1937-38 to 21.14 per

¹⁾ Right-whales.

cent for the last season. This is the highest figure recorded relating to fin-whales since 1930-31. More than 50 per cent of the humpbacks killed last season were immature animals.

At the same time as the percentage of immature animals killed last season has risen, the average size of blue- and fin-whales has decreased as compared with the previous season, as far as the pelagic whaling is concerned. See table g, page 11. This table has now been extended to include humpbacks and sperm-whales. The average size of these two species has also decreased last season, as compared to the previous season.

The figures for South Georgia comprising a series of years are printed in table h, above.

The whaling off South Georgia last season was carried on from 2 shore stations with 11 catchers. The result of last season's catch was 212 animals less than for 1937-38, while, on the other hand, the oil production increased by 21,224 barrels for the same period. The greater output of oil was principally due to the fact that the whales killed in this area were extraordinarily fat last season, thus increasing the oil output per blue-whale unit from 95.7 barrels to 117.6, or, in other words by 21.9 barrels (see table l, page 16). We note a marked rise in the number of blue-whales, a drop in the number of fin-whales and a considerable drop in the number of sei-whales, but again a considerable increase in the number of sperm-whales.

According to the table, the number of whales killed in relation to the number of catchers operating off South Georgia dropped last season, from 157 whales per boat in 1937-38 to 152 in 1938-39.

The whaling off South Georgia month by month in absolute and relative figures, will be found in tables *i* and *j* on pages 13 and 14.

Table *k* gives the distribution of blue- and fin-whales with respect to immature and mature animals.

We note that the percentage of immature blue-whales shows a marked decrease from previous years. While more than 50 per cent of the blue-whale catch off South Georgia of late years has consisted of immature animals, last season's percentage was only 46.98. Also for fin-whales this percentage was lower last season than during the 3 previous years.

As a consequence of the decrease in the catch of quite young animals, the average size of the blue-whales and fin-whales killed in these waters has risen last season. See table *g*, page 11.

The result of the whaling off South Georgia is to a large extent depending on the ice situation. In 1938–39 for instance, the ice situation created excellent feeding grounds for the blue-whales.

In table *l*, page 16, is given a calculation of the average oil production per blue-whale unit for a series of years.

According to this table the average yield for South Georgia has increased considerably, from 95.7 barrels in 1937–38 to 117.6 barrels in 1938–39. This is

Table I.—Average production of oil per blue-whale unit.¹⁾

¹⁾ Barrel = $\frac{1}{6}$ ton (ton = 1,016 kg.). ²⁾ Including the production of two Norwegian expeditions hired by Germany—in 1936–37 134,200 barrels, in 1937–38 180,750 barrels and in 1938–39 118,380 barrels.

increasing degree during the last 4-5 years, and that the whaling of other nations accounted for about 40 per cent of the total proceeds last season.

In order to ascertain the distribution of the total proceeds among the participating nations we have in table *n*, on page 17 specified the number of whales killed and the oil production as far as the principal nations are concerned since 1935-36.

The absolute figures show a decrease in the number of whales killed with respect to Norway, the British Empire, Germany, Panama and other countries. Of the participating nations only Japan has killed a greater number of whales in the last season than in the previous one. German expeditions killed 171 whales less than in 1937-38, but nevertheless their oil production increased by 17,291 barrels.

Looking at the percentage figures we find Norway's as well as The British Empire's share of the total proceeds constantly declining. This is chiefly to be accredited to the gain of Japan and Germany. The *British* expeditions operated last season from one shore station and 9 floating factories with 79 catchers, i. e. with a somewhat reduced equipment as compared to the previous year, when the corresponding figures were 1-10-89. The British share of the total catch has, consequently, declined the most, from 35.0 to 29.2 per cent or by about 6 per cent as far as the number of whales is concerned but only by about 3 per cent with regard to the oil production, from 34.5 to 31.6 per cent. *Norway* operated last season with 12 floating factories and 90 catchers as against 11 floating factories and 83 catchers the previous season. Nevertheless, the proceeds declined from 32.5 to 30.0 per cent, or by 2.5 per cent as regards the number of whales killed and from 34.7 to 29.9 per cent, or by as much as 4.8 per cent in regard to the output of oil.

The *Japanese* have increased and improved their equipment from year to year and operated last season with 6 floating factories and 49 catchers as against 4 floating factories and 30 catchers during the previous season. Not being a party to the international convention, as previously referred to, they have, been in a position to increase their share of the total proceeds of the whaling to a considerable extent, by as much as 7.6 per cent in regard to the number of whales killed and by 5.5 per cent in oil production. The Japanese share of the total proceeds amounted to 19.7 per cent in regard to the number of whales killed and to 17.1 in regard to the oil production for the last season. *Germany* also had increased the equipment, by 1 floating factory and 11 catchers from the previous season, and the German share of the Antarctic whaling increased by about 2 per cent in the number of whales killed and by nearly 3 per cent in the oil production, the German share of last season's total proceeds thus amounting to 13.2 and 13.3 per cent in regard to the number of whales killed and output of oil respectively. The share of the other nations participating —Panama, U. S. A. and Argentine, does not amount to more than about 8 per cent of the total proceeds. The figures show a slight decline for last season.

A review of the oil prices for the period 1885–1931 is given in International Whaling Statistics IV. The prices later on have been as follows:

Whale oil No. 1.—Price per ton.

Years.		Highest.	Lowest.
		£ sh.	£ sh.
1932.....	Naked	14. 10	10. —
1933.....	"	15. 10	10. —
1934.....	"	12. —	8. 10
1935.....	"	20. 5	8. 10
1936.....	"	23. —	17. 10
1937.....	"	22. 10	17. —
1938.....	"	17. —	12. —
1939.....	"	15. 10	12. —

The bulk of last season's production was sold at £ 15-0-0 and £ 15-10-0 per ton. A few unimportant sales were concluded at slightly higher prices.

Until 1934–35 the crews employed in whaling in the Antarctic were almost exclusively Norwegian. As other nations took up the competition, Norwegian crews were employed to begin with, but were later gradually replaced by crews of the respective nationalities.

In 1935–36 455 of the crews or about 6 per cent were of other nationalities than Norwegian, mostly Japanese. During the last 3 seasons the number according to the Whaling Gazette was as follows:

Table o.—Distribution of whaling crews by nationalities.

	Total.	Norwegian.	British.	Japanese.	German.	Others.
1936–37.....	9,321	7,678	454	837	255	97
1937–38.....	11,227	7,615	675	1,840	886	211
1938–39.....	12,705	7,517	866	2,793	1,386	143

As will appear from this table there has been a great increase in the number of crews of British, Japanese and German nationality, while the number of Norwegians has slightly declined during later years. Last season as much as 40.8 per cent of all the crews employed in the Antarctic were of other nationalities than Norwegian.

Oslo, December 12th 1939.

Gunnar Jahn.
