P R E F A C E

The present publication, International Whaling Statistics No. XLIII, comprises the whaling operations in the Antarctic during the season 1957–58 and on grounds outside the Antarctic in the calendar year 1958.

Statistical data are lacking about the catch and production from "*Soc. Industrial de Produtos da Pesca Ltda*", *Brazil*.

Further, statistical data relating to the size of the whales killed have not been received from the following companies and grounds:

"*José Lopez Gutierrez S.A.*", *Algeciras, Spain*,

"*Industrial Ballenera S.A.*", *Canelinas and Vigo, Spain*,

"*Macaya Hermanos y Cia*", *Chile*, and 3 companies operating from *Peru*.

With these exceptions the statistics, to the best knowledge of the Committee, include all operations carried on in 1958.

In this publication are included some new tables recording the catch of small whales on the various grounds during the last 5 seasons, see pages 33–37. Data are not available for the catch of small whales off the Faroe Islands and for the Sovjet-Russian catch.

O s l o , December 1959.

Gunnar Jahn.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

This publication comprises the world aggregate whaling results for 1958, i.e. the catch in the Antarctic during the season 1957–1958 and the catch on grounds outside the Antarctic during the calendar year 1958. Detailed information about the whaling activity in the Antarctic during the season 1957–1958 has been given in International Whaling Statistics No. XLII. The present volume gives specifications of the operations on grounds outside the Antarctic in 1958.

In 1958 the following alterations took place in respect to the participation in the operations outside the Antarctic:

“*Golden Gate Fishing Co.*” commenced whaling from a shore station at Point San Pablo, California,

“*Kaiyo Suisan K.K.*” commenced whaling from a shore station on the south-west coast of Okinawa Island,

“*Ryukyu Shokuhin K.K.*” commenced whaling from a shore station on the south-east coast of Okinawa Island,

“*Compania Industrial*”, which for a series of years has carried on whaling from the shore station Quintay, also commenced whaling from the shore station Molle.

On the other hand there was no whaling operation from the station belonging to “*Hauraki Whaling Limited*”, New Zealand.

It should also be mentioned that a floating factory in 1958 caught 16 sperm-whales in the South Atlantic Ocean on its way to and from the Antarctic.

In 1958 whaling was carried on from the following grounds outside the Antarctic:

Africa: Natal, Cape Province.

Brazil: Paraiba, Santa Catarina.

North Atlantic and Arctic: Azores, Madeira, Spain, Norway, Faroe Islands, Iceland, West Greenland, Newfoundland.

Pacific North: California, British Columbia, North Pacific Ocean and Bering Sea, Kamtchatka, Kuril Islands, Japan, Ryukyu Islands.

Other grounds: South Atlantic Ocean, Peru, Chile, Australia, New Zealand.

These are the same grounds of operation as in 1957 with the exception of South Pacific Ocean and Indian Ocean, where Japanese floating factories on their way to the Antarctic grounds in 1957 caught some sperm-whales.

The total catch of whales has increased in recent years, and the number killed in 1957-58 is the largest ever recorded. In this survey we do not analyse the figures concerning the catch in the Antarctic, the catch on the other grounds being the object of these statistics.

From table *a*, page 13, it will be seen that whaling on grounds outside the Antarctic during the year 1958 was carried on from 54 shore stations, 3 floating factories and with 160 catchers. This is the same number of floating factories, but 5 shore stations and 11 catchers more than in 1957. The number of shore stations operated on grounds outside the Antarctic in 1958 was the highest ever recorded for one single season, and only in one previous season a higher number of catchers has been engaged outside the Antarctic, namely in 1951 with the maximum figure of 208 catchers.

In the survey below is recorded the number of whales killed on grounds outside the Antarctic during the period 1937/38-1957/58. Figures for the Antarctic whaling are also included in order to give the total world whaling results during this period.

Season	Total of whales killed	In Antarctic			On other grounds		
		Total	Baleen whales	Sperm- whales	Total	Baleen whales	Sperm- whales
1937-38.....	54,902	46,039	45,172	867	8,863	5,967	2,896

1955-56.....	58,126	38,580	31,606	6,974	19,546	7,930	11,616
1956-57.....	59,056	36,115	31,686	4,429	22,941	8,214	14,727
1957-58.....	64,586	39,896	33,361	6,535	24,690	9,379	15,311

The total catch on the grounds outside the Antarctic has increased considerably during the postwar seasons. This increase is, however, principally a result of the large catch of sperm-whales. Since the 1949-season the catch of sperm-whales outside the Antarctic has increased from about 5,000 animals in 1949 to 15,300 in 1958. It seems as if the catch of baleen whales on grounds outside the Antarctic has stabilized from 1949 onwards, the number of baleen whales killed during these years varied between 7,100 and 9,400 only.

In order to be able to analyse the statistics, the figures must be split up in respect to the various grounds as well as in respect to the species of whales killed.

In the *North Atlantic and Arctic* whaling has been carried on continually during the post-war seasons from Norway, the Faroe Islands, Iceland (from 1948), and Greenland. Whaling from Newfoundland and Labrador was of considerable importance during the years 1946–1951. Later the stations were closed, but whaling has been resumed on a considerably reduced scale during the last years.

The whaling operations off the coast of Norway have been reduced in recent years. (See table i, page 24, with post-war figures from and including 1949.) Up till 1955 4 shore stations with 11–12 catchers were active, but in 1957 and 1958 whaling was carried on from 2 shore stations with 6 catchers only. The aggregate number of baleen whales killed as well as the number of whales per catcher has declined in later years.

The baleen whale catch off the Faroe Islands has declined since 1951. In later years the catch has varied considerably from one year to another. In 1956 49 baleen whales were killed, in 1957 142 and in 1958 17.

The catch of baleen whales off Iceland has not, according to the statistics at our disposal, shown any decline in the number of baleen whales killed. This does not, however, apply to blue-whales. From and including the summer 1955 the taking of blue-whales in the North Atlantic and Arctic was prohibited for a period of 5 years, but Denmark and Iceland have protested against this prohibition, and are thus free to kill blue-whales. The number of blue-whales killed during the years before 1955 and after that period off the Faroe Islands, Iceland and Greenland indicate that the stock is declining.

From Greenland and Newfoundland whaling in later years has been carried on with one single catcher, and it is impossible to draw any definite conclusion as to the decline of the catch or to the diminishing of the stock.

Whaling has also been carried on in the south eastern part of the Atlantic from the *Azores, Madeira* and *Spain* in the later years (see tables *j–l*, page 25). This whaling is chiefly restricted to the catch of sperm-whales. The figures recorded for the baleen whale catch have declined considerably.

The whaling off the *African* coast (see table *n*, page 27) during the latest seasons has been carried on off Natal and Cape Province only, Natal being the only ground continually operated in all postwar years. The catch of sperm-whales has been of considerable importance in these years. As to baleen whales, the catch of humpbacks was of major importance to the whaling off the coasts of Madagascar and Congo. The activities off the coast of Madagascar stopped in 1950. During that year the catch of

humpbacks was 711 against 1,333 in 1949. The whaling off the coast of Congo stopped in 1952, when the number of humpbacks killed had decreased to 265, from 1,105 in 1951. On the Congo ground the catch of sei-whales was of some importance. The baleen whale catch off Natal in later years has been based upon the catch of fin-whales. Next to this species comes the sei-whale. The catch of blue-whales and humpbacks has declined considerably. Whaling off the Cape Province was resumed in 1957, and the results recorded show that most of the baleen whales killed are sei-whales. Next in importance are fin-whales.

Whaling in the *Pacific North* (see table *p*, page 28) has been carried on in recent years from California, British Columbia and the Ryukyu Islands. The pelagic whaling from Bonin Island stopped in 1952. The whaling station on the coast of British Columbia has been operating in all postwar years. Most of the baleen whales killed on these grounds during the last years have been fin-whales. In some of the earlier seasons the humpbacks and sei-whales killed exceeded the number of fin-whales, but in later years the catch of the former species has declined. The blue-whale catch is of little importance.

The figures for the whaling carried on from the shore stations on the coasts of *Japan* (see table *q*, page 29) show that the catch of sperm-whales has become increasingly important. The total catch of baleen whales has shown some variations from year to year, but as a whole the figures are stable. As to the number of the various species killed, the figures show a marked decline in the number of humpbacks and blue-whales. We will also emphasize that the number of sei-whales killed has increased, while the number of fin-whales killed is stable, even if the number recorded for the two last years are lower than the figures recorded in 1955 and 1956.

The whaling in the *North Pacific Ocean and Bering Sea* (see table *r*, page 29) has been carried on since 1955 from 2 floating factories with 13–15 catchers. During these years the catch of sperm-whales has been of great importance, the catch of fin-whales has been stable, the catch of sei-whales has risen while the blue-whale catch has been restricted to 70 animals per season.

Whaling from *Kamchatka* (see table *s*, page 29) is based on the catch of sperm-whales, the catch of baleen whales being of less importance in later years. In 1957 and 1958 one floating factory with 7 catchers were in operation.

Whaling off the *Kuril Islands* (see table *t*, page 30) has been carried on during the last 3 seasons from 4 shore stations. In 1958 22 catchers were operating, in 1957 only 14. The majority of the whales killed were

sperm-whales, although the baleen-whale catch is of some importance, including some few blue-whales. The number of blue-whales killed, however, is higher than in most waters, with exception of the number killed from the floating factories in the North Pacific.

Whaling off *Brazil* (see table *u*, page 30) is carried on from 1–2 shore stations with 2–3 catchers only, and the whales killed are sei-whales.

In *Peru* whaling is carried on from 2–3 shore stations (see table *v*, page 30) and the whales killed during the last two seasons have been exclusively sperm-whales. In former years there were also killed some baleen whales, the number of which declined rapidly from and including 1954.

In *Chile* (see table *w*, page 31) whaling has been carried on in 1958 from 3 shore stations with 13 catchers, in 1957 from 2 stations but with the same number of catchers. Most of the whales killed were sperm-whales, the baleen whales have, however, also been of some importance. According to the statistics the number of fin-whales killed has decreased during the last 3 years. In the same period the blue-whale catch has been of greater importance than the catch of the other species of baleen whales, and there is no tendency to any decrease in their number even if the number killed is not great.

Whaling off *Australia and New Zealand* (see tables *z* and *z¹*, page 31) is mainly restricted to humpbacks, although a few of the other species of baleen whales have been killed. In the last years also some sperm-whales have been taken.

Table z², page 32, shows the production of by-products in the Antarctic and on the individual grounds outside the Antarctic during the last two seasons.

The chief by-products are whale meat and whale meal, of which the total production in 1957–58 were 128,382 tons and 78,356 tons, respectively. Of these quanta 85,595 tons whale meat and 44,914 tons whale meal were produced in the Antarctic.

In some new tables *z³–z⁸*, pages 33—37, is recorded the catch of small whales on the various grounds outside the Antarctic during the last 5 seasons. Data are, however, not available for the catch of small whales off the Faroe Islands and for the Sovjet-Russian catch.

Table No. 9.—Average production of oil per “blue-whale unit” in the summer season 1958.

Other whales are reduced to blue-whale equivalents on the following basis:
 1 blue-whale = 2 fin-whales = 2½ humpbacks = 6 sei-whales = 2 right-whales.

Geographical areas.	Company.	Blue-whale equivalents.	Oil production.	
			Total.	Average per blue-whale equivalent.
