## P R E F A C E

The present publication, International Whaling Statistics No. XXXI, relates to whaling operations in the Antarctic in the season 1951–52 and on grounds outside the Antarctic in 1952.

The Spanish company "Industrial Ballenera de Corcubión" has, according to information, been operating at Canelinas Bay, Spain, but the Committee has been unable to get statistical details of the catch and production. Otherwise the Committee has received information as to the number of whales killed and the oil production from all companies engaged on grounds outside the Antarctic during 1952.

From the following companies the Committee has, however, not succeeded in getting statements which show the size of the whales captured: "Ballenera Paracas S.A." shore station at Paracas Bay in Peru,—"Compania Industrial," shore station "Quintay," Chile,—"Ballenera del Estrecho," shore station "Getares," Algeciras, Spain,—and the companies operating from the Azores and Madeira. With these exceptions the statistics for the year 1952 should be complete.

On pages 27–29 is included a new table showing the production of by-products on the different grounds outside the Antarctic during the seasons 1947–1952. Supplied with the Antarctic figures, this table shows the total quantity of by-products for all whaling grounds.

Oslo, February 1954.

## INTRODUCTION

The present publication comprises the world aggregate whaling results in 1952. It includes the Antarctic operations in the season 1951–52 and the operations on grounds outside the Antarctic in the calendar year 1952. Details respecting the Antarctic catch were given in International Whaling Statistics No. XXX, while the results for other whaling grounds in 1952 are presented here.

The usual tables illustrating the development of whaling from 1937–38 to and including 1951–52 have been enclosed on pages 11–26 as an annex to this introduction.

Owing to the high prices of oil and by-products, there has in the post-war years been considerably greater whaling activity on grounds outside the Antarctic than in the years prior to 1940. In 1951 50 shore stations, 7 floating factories, and 210 catchers were employed in these areas, the largest whaling material so far recorded in post-war years. A heavy fall in the oil prices at the beginning of 1952 resulted, however, in a diminished whaling activity outside the Antarctic. Thus, the whaling material in operation in the season 1952 was reduced to 46 shore stations, 4 floating factories, and 139 catchers. See annexed table *a*, page 11. The Committee draws the attention to the fact that in this table the figures relating to the number of shore stations and the number of catchers employed in waters outside the Antarctic have been revised for the seasons 1946–1951. It appears that the data published in earlier volumes concerning the Japanese waters for these seasons have recorded a too low number of shore stations and a too high number of catchers. Corresponding corrections have also been made in respect to Japan in table *o*, page 24.

Seven companies, which carried on whaling in 1951 from a shore station at each of the grounds French Congo, St. Thomé, Scotland, Faroe Islands, Newfoundland, Labrador, and California did not resume whaling in 1952. Moreover, 3 floating factories were engaged in sperm-whale catch off the coast of Peru in 1951. None of them were, however, operating on this ground in 1952.

On the other hand, 2 new companies commenced whaling in 1952 in the Australian waters, one of them from a shore station on More-

ton Island, East Australia, and the other from a shore station in Frenchman Bay, South Australia.

A new Spanish company operated in 1952 with 2 catchers from Canelinas Bay, Spain. As mentioned in the preface the Committee has, however, not received any statistical reports from this company.

In 1952 whaling was carried on from the following grounds outside the Antarctic:

*Africa*: Natal, Cape Province, French Congo, Spanish Morocco.

*Brazil*: Paraiba, Sta Catarina.

*North Atlantic and Arctic*: Azores, Madeira, Spain, Norway, Faroe Islands, Iceland, West Greenland, Newfoundland.

*Pacific North*: British Columbia, Kamtchatka, Kuril Islands, Japan, Bonin Island.

*Other grounds*: Chile, Peru, Australia, New Zealand.

Apart from the grounds Portugal, Scotland and California, which were operated in 1951 but not in 1952, and the Sta Catarina ground where no whaling was carried on in 1951, the above-mentioned whaling grounds are the same as those operated in the previous season.

The following table gives a survey of the number of whales killed during the period 1937/38–1951/52. Specification is given for the Antarctic and other grounds, and for baleen whales and sperm-whales.

Season	Total of whales killed	In Antarctic			On other grounds		
		Total	Baleen whales	Sperm- whales	Total	Baleen whales	Sperm- whales
1937–38.....	54,873	46,039	45,172	867	8,834	5,967	2,867
1938–39.....	45,772	38,356	35,771	2,585	7,416	4,501	2,915

1943–44.....	6,197	1,799	1,698	101	4,398	2,208	2,190
1944–45.....	5,906	2,891	2,846	45	3,015	1,404	1,611
1945–46.....	19,348	13,387	13,114	273	5,961	2,809	3,152
1946–47.....	34,720	25,593	24,162	1,431	9,127	3,112	6,015
1947–48.....	43,378	31,318	28,696	2,622	12,060	4,885	7,175
1948–49.....	43,948	31,435	27,357	4,078	12,513	7,629	4,884
1949–50.....	45,060	32,396	29,669	2,727	12,664	7,205	5,459
1950–51.....	55,795	33,997	29,029	4,968	21,798	8,502	13,296
1951–52.....	49,752	35,237	29,752	5,485	14,515	8,474	6,041

The total number of whales killed on all whaling grounds has increased considerably during the post-war years. In 1950–51 it reached a maximum of 55,795, but fell to 49,752 in 1951–52. As will be seen from the table, this decrease of 6,043 whales is entirely due to the considerable drop in the sperm-whale catch outside the Antarctic in 1951–52.

It appears from the table, page 8, that the whaling outside the Antarctic during the post-war years has been carried on to a far greater extent than during the last pre-war years, and that this whaling has constituted a considerably higher share of the total world catch during the post-war years than before the war. The increased activity on grounds outside the Antarctic in recent years applies to baleen- as well as sperm-whale catch. In 1951 an exceptionally high number of sperm-whales was killed—13,296 animals—, a result of the activities of the above-mentioned three floating factories operating off the coast of Peru. In 1952, when whaling along the coast of Peru was insignificant, the number of sperm-whales killed dropped to 6,041. On the other hand, the catch of baleen whales in 1952 was almost equal to that of 1951.

In the annexed tables *j-v*, pages 20–29, particulars are given in respect to the individual whaling grounds in each area outside the Antarctic. These tables also contain retrospective figures for a series of years. The Committee does not consider it necessary to make detailed comments on the whaling results of the season 1952, but will call the attention only to the more significant variations in the catch during the last season as compared with the previous season or seasons.

On the whaling grounds in the *North Atlantic and Arctic* the total catch in each of the seasons 1948–1951 was between 1,575 and 1,751 whales. In 1952, however, only 780 whales were killed. This decrease is mainly due to the limited activity on the grounds off Newfoundland and the Faroe Islands in 1952.

The whaling results on the *coast of Africa* also decreased in 1952, the number of whales killed being 2,945 against 4,639 in 1951, 4,122 in 1950, and 4,966 in 1949. This decrease was primarily due to the reduced catch on the Congo ground, but also on the Natal ground a decline in the catch was registered. From Cape Province, however, a not insignificant increase was reported in 1952. Regarding the operations on the African coast, particular attention is drawn to the whaling in the Congo field. In 1949 and 1950 8 catchers captured about 1,400 humpback whales. In 1951 14 catchers captured 1,105 humpbacks. In 1952, on the other hand, 7 catchers killed only 265 humpbacks. In earlier periods we find a similar decline in the catch. It seems that the stock of humpback whales on the Congo ground within a short period will be overtaxed.

Off *Kamtchatka* 2 floating factories were operating in 1952, as compared with 1 floating factory in the other post-war years. From this ground (Kuril Islands included) the catch amounted to 3,430 whales in 1952 against 2,583 whales in 1951, 2,357 in 1950, and 2,015 in 1949. The grounds off Kamtchatka and round the Bonin Island are situated in the area in the Pacific North in which pelagic whaling on baleen whales is permitted.

In the *Australian* waters 1,787 humpback whales were killed in 1952, as compared with 1,224 in 1951. With exception of the seasons 1914, 1936, and 1937 this is the largest annual catch in the Australian field. As previously mentioned, 2 new companies commenced whaling here in 1952, and 4 companies in all were operating during this season.

In the annexed table *v*, page 27, it is, for the first time, given a survey on the production of *by*-products in all whaling grounds—in the Antarctic as well as in the different grounds outside the Antarctic. This survey refers to the post-war years 1945/46–1951/52.

<sup>1)</sup> Barrel = 170 kg. (Barrel = abt. 1/8 long ton, 1 long ton = 1,016 kg.)

\* Figures for 1940-41 and 1941-42 are omitted. Total number of whales killed in 1940-41 4,361, and in 1941-42 1,162; total oil production 274,987 barrels and 47,745 barrels respectively.

**Table i.—Average size of whales killed in the different grounds in the years  
1938, 1939, and 1947 to 1952.**

<sup>1)</sup> Different kinds of small whales. <sup>2)</sup> Different kinds of small whales and 1 right-whale. <sup>3)</sup> 2 Minke-whales and 1 bottlenose. <sup>4)</sup> During the war—owing to shortage of food—a number of licenses were issued for whaling on the Norwegian coast. Fishing boats were used as catchers and the whale meat sold for human food. <sup>5)</sup> 1 bottlenose. <sup>6)</sup> Catch result for the shore station and 3 catchers: 3 blue-whales, 27 fin-whales and 1,391 barrels of whale oil. <sup>7)</sup> As no information has been available re. oil production of one shore station, it has been calculated on basis of the output of the other shore station. <sup>8)</sup> Minke-whales.

\* Figures for the years 1940-1943 are omitted.
