P R E F A C E

The present publication, International Whaling Statistics No. XXXII, embraces the results of the Antarctic whaling for the season 1952–53.

All the participating expeditions have sent in to the Committee for International Whaling Statistics the particulars prescribed in the International Convention for the Regulation of Whaling.

During the preparation of the introductory tables to this publication some corrections have been made concerning the seasons 1937–38, 1938–39 and 1945–46 to 1951–52. The International Whaling Commission duly requested the Committee for International Whaling Statistics to prepare more detailed statistics concerning the Antarctic whaling results. In order to comply with this request, the statistics covering the above mentioned seasons has been established by means of the punch card system, and a series of detailed surveys have been elaborated and forwarded to the members of the International Whaling Commission.

By examining the whaling statistics prepared by the punch card system there appeared some minor discrepancies between the new tables and those previously elaborated. In the introductory tables g, h, i, j, k, l and m the figures have now been corrected in accordance with the tables most recently prepared.

The data previously recorded for the total oil production in the season 1951–52 have been revised, the final discharge at 1 shore station amounting to an additional production of 1,782 barrels.

All figures relating to the average size of the whales killed and all percentage figures are in the present publication recorded with 1 decimal against 2 in earlier volumes.

Oslo, April 1954.

Gunnar Jahn.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

During the Antarctic season 1952-53 8 countries carried on whaling with 16 floating factories, 3 shore stations and a total of 251 catchers. The whaling material employed in 1952-53 belonged to the participating countries as follows:—

During the previous season 1951-52 a total of 19 floating factories, 3 shore stations and 284 catchers were operating, i.e. 3 floating factories and 33 catchers more than in 1952-53. The reduction of the material employed in 1952-53 was due to the withdrawal of the following 3 Norwegian expeditions: "Kosmos III" (Aksjeselskapet Kosmos, Sandefjord), "Thorshøvdi" (A/S Odd, Sandefjord) and "Antarctic" (Hvalfangergeselskapet "Antarctic" A/S, Tønsberg). The floating factory "Antarctic" has been altered to a tanker and has been withdrawn from the Antarctic whaling for ever.

Further, the Japanese floating factory "Baikal Maru" with 5 catchers was engaged in sperm-whale catching in the Antarctic during the previous season 1951-52, but was not operating in the Antarctic in 1952-53.

All the countries participating in the Antarctic pelagic whaling season 1952-53 have ratified the International Whaling Convention of 1946 and approved the alterations made in the Schedule of the Convention adopted at the meetings of the International Whaling Commission.

The most important regulations of the International Whaling Convention concerning the pelagic whaling during the Antarctic season 1952-53 were:—

1. Catching period for baleen whales was from January 2nd 1953 to April 7th 1953.

**Table a.—Weekly catch of whales in blue-whale units,
according to telegraphic reports from the whaling grounds.**

Season 1950—51.		Season 1951—52.		Season 1952—53.

9/3 " "	991.4			16/3 " "	281.0
Total	16,371.3	Total	15,970.8	Total	14,854.9

2. Catch of baleen whales was not to exceed 16,000 blue-whale units. (As one blue-whale unit is reckoned 1 blue-whale or 2 fin-whales or 2½ humpbacks or 6 sei-whales). The Contracting Governments were to send in weekly reports of the catch converted into blue-whale units. On the basis of the reports received the Committee for International Whaling Statistics was to terminate the baleen whale operations by 14 days' notice if the permissible number of blue-whale units might be presumed to be caught before April 7th 1953.
3. It was forbidden to use a factory ship or a whale catcher attached thereto for the purpose of taking or treating humpback whales in any waters south of 40° South Latitude, provided that in the pelagic whaling season for baleen whales 1953 the taking of humpback whales should be permitted on the 1st, 2nd and 3rd February and if the number of humback whales taken on those three days was less than 1,250, the Bureau of International Whaling Statistics should in their discretion specify one or more days later in the season on which further humpback whales might be taken, so as to bring the total up to a maximum of 1,250.
4. It was forbidden to take

blue-whales	under	70	feet
fin-whales	„	60	„
sei-whales	„	40	„
humpbacks	„	35	„
sperm-whales	„	38	„

¹⁾ Excl. fl.f. "Baikal Maru" with 5 catchers. Catch of sperm-whales only.

Further it was forbidden to take grey-whales or right-whales or female whales accompanied by a calf. The Convention also contained a provision enjoining full utilization of whales.

5. Pelagic hunting of baleen whales was prohibited between 70° West and 160° West.
6. Notification should be given in accordance with the provisions of Article VII of the Convention, within two days after the end of each calendar week, of data on the number of blue-whale units taken in any waters south of 40° South Latitude by all whale catchers attached to factory ships under the jurisdiction of each Contracting Government, and in addition notification of data on the number of humpback whales taken in pursuance of paragraph 6, including nil returns on days when no humpback whales were taken, should be given at the end of each day on which the taking of humpback whales was permitted.

Paragraph 6 of the Schedule, to which reference is made, is given in extenso in point 3 above.

In Article VII of the Convention is stated:—

"The Contracting Governments shall ensure prompt transmission to the Bureau of International Whaling Statistics at Sandefjord in Norway, or to such other body as the Commission may designate, of notifications and statistical and other information required by this Convention in such form and manner as may be prescribed by the Commission."

The land stations on South Georgia were allowed a 6 months' consecutive catching period, and were otherwise subject to the same provisions as stated in paragraph 4 above.

In accordance with the above regulations¹ the catch of humpback whales commenced on February 1st, and during the first 3 days of February 410 humpbacks were killed. The Committee for International Whaling Statistics decided to extend the humpback catch for another 3 days, viz. February 16th, 17th and 18th. The total catch of humpback whales amounted to 949 animals, i.e. 301 whales less than the fixed maximum quota.

The summary below specifies the number of humpbacks killed during the individual days of operation:—

On February	1st	204	humpback whales
„	2nd	112	„ „
„	3rd	94	„ „
„	16th	226	„ „
„	17th	169	„ „
„	18th	144	„ „

Total.....	949	humpback whales
------------	-----	-----------------

Pursuant to the regulations laid down in the International Convention the Committee for International Whaling Statistics received weekly reports of the catch of baleen whales converted into blue-whale units. Table *a*, on page 8, gives a survey of the weekly catch of blue-whale units during the last 3 seasons according to the telegraphic reports from the grounds.

The Committee for International Whaling Statistics has been commissioned to decide, on the basis of the weekly reports received, the date when the quota of 16,000 blue-whale units might be presumed to have been reached. This date is to be considered as the closing day for baleen whale operations, and due notification is to be given the Contracting Governments at least 14 days in advance.

According to the reports available on Saturday, February 21st, 11,454.7 blue-whale units were killed. The chairman of the Committee for International Whaling Statistics consequently called together a meeting of the Committee on Friday, February 27th, to discuss the closing date of operations. In order to obtain the most complete information possible, the Committee requested all the pelagic expeditions to forward a report of their catch per Wednesday, February 25th 1953. On February 27th these reports were available from 13 of the 16 participating expeditions, and on the basis of these results the Committee fixed the closing date to be March 16th.

¹⁾ Right-whales. ²⁾ 703 "Baleen-whales" no specification given, 2 right-whales. ³⁾ Bottlenose. ⁴⁾ Minke-whales.

According to the telegraphic reports from the grounds, the aggregate result per March 16th amounted to 14,854.9 blue-whale units. By examining the statistical data provided by the companies after the return of the expeditions from the whaling grounds, it appears that the total catch of the pelagic expeditions amounted to:—

$$3,866 \text{ blue-whales} = 3,866.0 \text{ blue-whale units}$$

$$21,197 \text{ fin-whales} = 10,598.5 \quad \text{—,—}$$

$$954 \text{ humpbacks} = 381.6 \quad \text{—,—}$$

$$123 \text{ sei-whales} = 20.5 \quad \text{—,—}$$

$$\text{Total } 26,140 \text{ whales} = 14,866.6 \text{ blue-whale units}$$

i.e. 1,133.4 blue-whale units less than the permissible maximum quota.

¹⁾ For the seasons 1919/20-1930/31 the catch in the Ross Sea and from South Shetland and South Orkney is included in the figures for pelagic whaling in the Antarctic. ²⁾ Right-whales. ³⁾ 703 "Baleen whales" no specification given, 1 right-whale. ⁴⁾ Bottlenose. ⁵⁾ Minke-whales.

During the last 6 seasons, when the official closing date for baleen whale operations has been fixed by the Committee for International Whaling Statistics, the catch, converted into blue-whale units has been as follows:—

Season 1947-48	16,364.3	blue-whale units
1948-49	16,007.4	—, —
1949-50	16,062.1	—, —
1950-51	16,416.2	—, —
1951-52	16,007.7	—, —
1952-53	14,866.6	—, —

This gives an average catch per season of 15,954.1 blue-whale units.

Table e.—Average production per floating factory and catcher in the pelagic whaling in Antarctic 1927/28—1952/53 (exclusive of the war-seasons).

¹⁾ Including the production from "Deception". ²⁾ Including the production of the aux. factory "Ole Wegger". ³⁾ Not including sperm-whales.

The whaling period for baleen whales during the last season 1952-53 lasted from January 2nd to March 16th, or 74 days. During the post-war years the length of the whaling seasons for the pelagic expeditions in the Antarctic has been as follows:—

Season		Catching days
1945-46	November 24th-March 24th	121
1946-47	December 8th-April 7th	121
1947-48	December 8th-March 31st	115
1948-49	December 15th-March 26th	102
1949-50	December 22nd-March 15th	84
1950-51	December 22nd-March 9th	78
1951-52	January 2nd-March 5th	64
1952-53	January 2nd-March 16th	74

Table *b*, page 9, gives information of the number and gross tonnage of the floating factories and catchers engaged in pelagic whaling from 1933-34. The figures recorded below show the increase of the average number of catchers per floating factory and the average engine power of the catchers as from the season 1947-48:—

Season	Number of floating factories	Average number of catchers per floating factory	Average I.H.P. of the catchers
1947-48	17	9.5	1,376
1948-49	18	10.6	1,562
1949-50	18	12.0	1,635
1950-51	19	12.6	1,831
1951-52	19	13.8	1,910
1952-53	16	14.4	1,999

As the whaling from the shore stations on South Georgia is quite insignificant in comparison with the pelagic operations in the Antarctic, the results of the pelagic whaling from 1919-20 up to and including 1952-53 have been recorded separately in table *d*, page 12. The total whaling results in the Antarctic during the same period will be seen in table *c*, page 11.

During the season 1952-53 the pelagic expeditions killed 28,325 whales, yielding an oil production of 1,998,094 barrels, of which 1,884,207 barrels were whale-oil and 113,887 barrels sperm-oil. During the previous season 1951-52 32,575 whales were killed, from which were produced 2,334,805 barrels of oil, of which 2,054,853 barrels were whale-oil and 279,952 barrels sperm-oil. This means a decrease in 1952-53 of 4,250 whales killed and a decrease of 170,646 barrels of whale-oil and 166,065 barrels of sperm-oil. The reason for the decrease in the whale-oil production is that the baleen-whale catch in 1952-53 did not reach the maximum quota of 16,000 blue-

Table f.—Whales caught in the pelagic whaling. Percentage figures.

1952-53.....	13.7	74.8	3.4	0.4	7.7	100

whale units. As previously mentioned this catch amounted to 14,866.6 blue-whale units when the whaling operations ceased.

The number of blue-whales killed decreased still further during the season 1952-53. During this last season only 3,866 blue-whales were killed, as compared with 5,124 during the preceding season. The humpback catch also showed a decline of 592 animals, whereas the fin-whale catch increased by 677 animals. The number of sperm-whales declined by 3,159 animals. This decline is mainly due to the fact that most of the pelagic expeditions were not engaged to any great extent in sperm-whale hunting before the baleen whaling season. The expeditions arrived at the whaling grounds only a short time before the opening of the baleen whaling season.

Table e, page 13, gives a survey for a series of years of the average total and average daily oil production per floating factory as well as per catcher. The table includes the production of whale-oil only. When judging the whaling results on the basis of these figures, due consideration must be taken to the limitation of the catch through curtailments of the whaling period and fixation of maximum quotas. Moreover, attention must be drawn to the variation in the number of floating factories and catchers employed, and to the considerable increase of the capacity of the whaling material in the post-war years.

Table *f*, page 15, illustrates the relation between the various species of whales killed in pelagic operations in the Antarctic from 1927–28. The results in 1952–53 reveal a further decline in the catch of blue-whales as compared with the total catch, to 13.7 per cent, against 15.7 per cent in 1951–52 and 22.3 per cent in 1950–51. The taxation of the fin-whale, on the other hand, has increased. The fin-whales killed in 1952–53 represented 74.8 per cent of the total catch, against 63.0 per cent in 1951–52 and 56.1 per cent in 1950–51.

The following statement of the correlation between the blue- and fin-whale catch since 1930–31 indicates the great displacement which has taken place between these two species of whales during the last 20 years.

Season	Blue-whales per cent	Fin-whales per cent
1930–31	76.7	23.3
1932–33	80.7	19.3
1936–37	51.6	48.4
1939–40	39.1	60.9
1946–47	40.8	59.2
1947–48	26.5	73.5
1948–49	30.1	69.9
1949–50	25.5	74.5
1950–51	28.5	71.5
1951–52	20.0	80.0
1952–53	15.4	84.6

By comparing the figures recorded for the catch of the various species of whales in each month during a series of seasons in later years—see tables *g* and *h*, pages 18 and 19, it will appear that the blue-whale now represents a smaller part of the total catch than during the pre-war seasons. These figures, however, are not strictly comparable. Whaling statistics of previous years shows that the presence of blue-whales is generally more abundant during the Antarctic spring months, i.e. November and December. Since 1951 the whaling operations have not commenced until January 2nd, and the decline in the blue-whale catch may therefore to a certain extent be attributed to this curtailment of the whaling period.

However, by comparing the data recorded for January and February—in these two months whaling operations have been carried on at full capacity during all seasons—it will appear that the number of blue-whales killed also in these months has been lower during the post-war seasons than in previous years. During the last two seasons, 1951–52 and 1952–53 there is, as will be seen from the figures on next page, a marked decline in the number of blue-whales killed in relation to all baleen whales killed. In February 1950–51, 1951–52, and 1952–53 there was killed a comparatively high number of humpbacks. If these humpbacks are deducted, the percentage figures for blue-whales killed in February in those 3 seasons will

be 27.6, 21.9, and 14.4, respectively. One may, however, still draw the conclusion that the stock of blue-whales has become considerably decimated.

Season	Number of blue-whales caught in pelagic whaling		Blue-whales in per cent of all baleen whales caught in pel. whaling	
	January	February	January	February
1938-39	4,892	2,365	40.5	24.9
1944-45	318	172	65.2	47.6
1945-46	1,041	1,204	32.9	32.4
1946-47	2,248	1,793	37.5	32.3
1947-48	1,968	1,481	23.0	22.8
1948-49	2,587	1,721	28.7	25.2
1949-50	2,620	2,124	25.5	25.4
1950-51	2,771	2,434	27.6	23.3
1951-52	2,325	2,495	18.6	19.3
1952-53	2,150	1,249	17.8	13.0

Table *i*, page 20, gives a survey of the average size of whales killed from and including 1938-39. The minimum length settled for the various species are:

Blue-whales 70 ft.
Fin-whales 60 "
Humpbacks 35 "

The average length of the blue-whales killed in 1952-53 was 77.5 ft. against 78.0 ft. during the preceding season and 79.0 ft. in 1949-50. This means a decrease of 1.5 ft. since 1949-50. During the seasons 1945/46-1948/49 there was an increase in the average size of blue-whales killed. The reason for that is probably that the animals born immediately before and during the war, enjoyed a period of preservation due to the wartime interval in the whaling activities. It is perhaps too early to give an opinion whether the great decrease in the average size during the last three seasons means that these age-groups have already been depleted. The decrease may, however, indicate that many young animals have been killed these last seasons.

The average size of the fin-whales killed decreased from 67.9 ft. in 1951-52 to 67.3 ft. in 1952-53. The increase in the season 1951-52 to 67.9 ft. from 66.6 ft. in 1950-51 is undoubtedly due to the fact that the minimum length determined for killing of fin-whales was raised from 55 to 60 ft. in the season 1951-52.

The average size of the humpbacks killed during the last season was 40.9 ft. against 40.4 ft. during the preceding season and 40.8 ft. in 1950-51.

In table *j*, page 21, is recorded the average size of all whales killed being above the present minimum lengths settled by international agreements. This table has been prepared in order to eliminate the possible influence which a variation in the legal size and in the number of undersized whales killed might have on the average size.

Table *k*, page 22, gives particulars of the catch of mature and immature whales.

The calculations of the proportion of mature and immature whales are based on the average size of the whales killed. Animals of the following sizes are regarded as mature:—

Blue-whales: Female	77	feet and above
Male	74	—, —
Fin-whales: Female	65	—, —
Male	63	—, —
Humpbacks: Female	41	—, —
Male	40	—, —

It will appear from table *k* that the percentage of immature blue-whales killed has increased considerably during the last two seasons as compared with the earlier post-war seasons. In 1952–53 39.1 per cent of the blue-whales killed were immature. This is an increase of 4 per cent compared with the previous season and an increase of 9.7 per cent compared with 1950–51. As far as the fin-whales are concerned, the percentage of immature animals in the 1952–53 catch was 22.1 per cent against 16.6 per cent during the previous season. Of the humpbacks killed 41.4 per cent were immature against 44.2 per cent in 1951–52.

**Table j.—Average size of whales killed, by species and sex 1938/39—1952/53,
excl. of blue-whales less than 70', fin-whales less than 60' and humpbacks less than 35'.

The whaling ground in the Antarctic, operated by the pelagic expeditions, extends from 70° west and eastwards to 160° west. The ground covers an area of about 8,100 miles, if the 60° latitude is considered as the basic line. It is evident that the whaling conditions and the presence of whales cannot be equal within this huge area.

For the purpose of obtaining more detailed information on the pelagic activities in the Antarctic the area around the South Pole cap has been divided into the following areas:—

- Area I between 70° west and 160° west
(where pelagic whaling is forbidden)
- Area II between 0° and 70° west
- , III , 0° , 70° east
- , IV , 70° east , 130° east
- , V , 130° east , 160° west

Table l, page 23, gives a survey of the number and average size of blue-, fin-, and humpback-whales killed in the above mentioned areas II–V from 1933–34. The blue-whale catch in the individual areas in the seasons 1951–52 and 1952–53 was as follows:—

Area	Season 1951-52		Season 1952-53	
	Blue-whales	Per cent	Blue-whales	Per cent
II.....	447	8.8	727	18.9
III	1,836	36.0	1,454	37.8
IV	1,199	23.5	837	21.8
V	1,619	31.7	829	21.5
Areas II–V	5,101	100.0	3,847	100.0

In the last season—as well as in the previous season, the largest number of blue-whales was killed in area area III. The remaining blue-whale catch in 1952–53 is divided over the other areas with about 20 per cent in each.

The fin-whales killed during the last two seasons are divided as follows:—

Area	Season 1951-52		Season 1952-53	
	Fin-whales	Per cent	Fin-whales	Per cent
II.....	5,977	29.4	4,551	21.7
III	7,122	35.1	11,364	54.2
IV	2,141	10.5	1,449	6.9
V	5,072	25.0	3,600	17.2
Areas II-V ...	20,312	100.0	20,964	100.0

In the season 1952–53 54.2 per cent of the fin-whales killed were taken in area III, against 35.1 per cent in 1951–52.

The humpback catch in 1952–53 was divided over the various areas as follows:—

Area II	1.5 per cent
" III	23.2 " "
" IV	20.3 " "
" V	55.0 " "

¹⁾ Right-whale.

Table m, page 24, contains a summary of the aggregate catch of blue-, fin-, humpback- and sperm-whales in the individual areas throughout the entire period 1933/34-1952/53. It appears from the table that 39.8 per cent of the blue-whales killed in this period have been taken in area III. The largest number of fin-whales and sperm-whales have also been killed in area III, viz. 36.9 per cent and 42.2 per cent. 46.8 per cent of the humpbacks have been taken in area IV.

Of the total number of whales killed during the above mentioned period 163,595 whales, or 38.2 per cent, have been killed in area III. In the other areas the catch has been as follows:—

Area II	123,898	whales	28.9	per cent
" IV	101,795	"	23.7	" "
" V	39,279	"	9.2	" "

¹⁾ Other whales are reduced to blue-whale equivalents on the following basis: — 1 blue-whale = 2 fin-whales = 2½ humpbacks = 6 sei-whales. ²⁾ Barrel = 170 kg. (Barrel = abt. 1/6 long ton. 1 long ton = 1,016 kg.)

Table *n*, page 25, gives a survey of the pelagic whaling results of the individual participating countries as from 1938–39, regarding the number of whales killed, oil production and number of catchers employed in each season.

South Georgia.

The whaling results of the shore stations operating from South Georgia are given in table *o*, page 26. Also in 1952–53 3 shore stations carried on whaling with 21 catchers. 2,328 whales were killed, from which were produced 120,003 barrels of oil, against 2,662 whales, yielding 144,375 barrels of oil in 1951–52. Operations from South Georgia were prevented by unfavourable weather conditions during the last season.

Tables *p* and *q*, pages 27 and 28, give the catch off South Georgia by months in absolute and percentage figures from and including 1938–39, and table *r*, page 29, shows the proportion of mature and immature animals killed.

The total whaling results in the Antarctic in the seasons 1937–38 until and including 1952–53 have in table *s*, pages 30 and 31, been distributed in respect to the individual participating countries. The percentage proportion of the oil production during the 3 last seasons was as follows:—

	Season 1950-51.	Season 1951-52.	Season 1952-53.
Norway	48.5 per cent	45.8 per cent	38.4 per cent
British Commonwealth	27.6 „ „	27.7 „ „	30.3 „ „
Japan	7.4 „ „	10.5 „ „	9.8 „ „
Panama	5.5 „ „	3.9 „ „	7.8 „ „
U.S.S.R.	4.8 „ „	6.0 „ „	7.3 „ „
Netherlands	4.5 „ „	4.4 „ „	4.9 „ „
Argentina	1.7 „ „	1.7 „ „	1.5 „ „

Table *t*, page 32, records the average output of oil per blue-whale unit for South Georgia and for the pelagic expeditions from 1924-25. For the shore stations on South Georgia the average yield of oil per blue-whale unit was 126.3 barrels in 1952-53, against 127.6 barrels in 1951-52. For the pelagic expeditions the average output was 128.0 barrels against 129.4 barrels during the preceding season. It appears from the table that the average output per blue-whale unit has increased considerably during the last two seasons as compared with the other post-war seasons. This increase is due to the postponed opening of the baleen whaling season, more effective whaling equipment and partly also to the raising of the minimum length limit of fin-whales in 1951-52 from 55 to 60 ft.

Table *u*, below, is recording the average *weekly* production per blue-whale unit for the pelagic expeditions during the last two seasons.

It will appear that the average yield per blue-whale unit is increasing as the whaling season proceeds, from about 100 barrels at the beginning of January to about 140 barrels at the beginning of March. At the close of the season the floating factories are sounding their oil tanks for controlling

¹⁾ Calculated. ²⁾ Products such as: Sinews, teeth, baleen, ambergris, pancreas, processed bone, bone fertilizer, protein, whale meat cakes, liver paste, whale hypophyses, internal organs.

purposes, and an eventual "surplus" will then be included in the production report of the last week of operation. For that reason the average production recorded for the last week of operation will generally be disproportionately high as compared with that of the previous weeks.

In table *v*, page 34, detailed information is given on the production of by-products in the Antarctic whaling. These data cover the post-war years 1945/46–1952/53.

During the season 1952–53 12,799 men were employed in the Antarctic whaling industry. Of these 6,787 were Norwegians, 2,757 Japanese, 1,015 British, 748 Russians, 424 South Africans, 319 Dutch and 749 of other nationalities.
