PREFACE

The present publication, International Whaling Statistics No. XXXIX, comprises the whaling operations in the Antarctic during the season 1955–56 and on grounds outside the Antarctic in the calendar year 1956.

Statistical data relating to the size and sex of the whales killed have not been received from the following companies: “*José Lopez Gutierrez S. A.*”, *Algeciras, Spain*, “*Industrial Ballenera S. A.*”, *Canelinas and Vigo, Spain*, “*Consorcio Ballenero S. A.*”, *Pisco, Peru* and “*Macaya Hermanos y Cia*”, *San Vicente, Chile*.

With these exceptions the statistics, to the best knowledge of the Committee, include all whaling operations carried on in 1956.

Oslo, December 1957.

Gunnar Jahn.

Birger Bergersen.

Einar Vangstein.

INTRODUCTION

This publication comprises the world aggregate whaling results for 1956, i.e. the catch in the Antarctic during the season 1955–56 and the catch on grounds outside the Antarctic during the calendar year 1956. Detailed information about the whaling activity in the Antarctic during the season 1955–56 has been given in International Whaling Statistics No. XXXVIII. The present volume gives specifications of the operations on grounds outside the Antarctic in 1956.

The Panamanian floating factory "*Olympic Challenger*" caught 3 sei-whales and 121 sperm-whales in the Southern Atlantic on its way from the Antarctic whaling grounds in the spring 1956. This floating factory has later been sold to Japan and has been re-named "*Kyokuyo Maru No. 2*".

The Spanish company "*Industria Ballenera S. A.*", which has previously operated from a shore station at Canelinas on the coast of Spain, has in 1956 also commenced whaling from a shore station at Vigo in Spain.

The following companies commenced whaling on grounds outside the Antarctic in 1956:

"*Aukra Hval A/S*" from shore station Hestnes, Norway,
"*Hawkes Harbour Whaling Co.*" from shore station Hawkes Harbour, Labrador,
"*Del Monte Fishing Co.*" from shore station Point San Pablo, California,
"*Norfolk Whaling Co. Ltd.*" from a shore station on Norfolk Island, Australia,
"*Hauraki Whaling Limited*" from a shore station in Hauraki Gulf, New Zealand.

On the other hand there was no operation from the station belonging to "*A/S Blomvåg Hval*" at Blomvåg in Norway.

"*Australian Whaling Commission*" has sold its shore station at Carnarvon on the west coast of Australia to "*Nor' West Whaling Company Ltd.*", for whose account whaling was carried on in 1956. The latter company has a shore station at Point Cloates, but this station was not in operation in 1956.

In 1956 whaling was carried on from the following grounds outside the Antarctic:

Africa: Natal, South Atlantic,
Brazil: Paraiba, Santa Catarina,
North Atlantic and Arctic: Azores, Madeira, Spain, Norway, Faroe Islands, Iceland, West Greenland, Newfoundland (Labrador),

Pacific North: California, British Columbia, Bering Sea, Kamtchatka, Kuril Islands, Japan,

Other grounds: Peru, Chile, Australia, New Zealand.

These whaling grounds are the same as those operated in 1955 with the exception of California.

From table *a*, page 13, it will be seen that whaling on grounds outside the Antarctic during the year 1956 was carried on from 50 shore stations and 3 floating factories, i.e. 3 shore stations more than in 1955 but the same number of floating factories. The total number of catchers employed in 1956 was 141 as against 134 during the preceding season. In 1951, when the whaling outside the Antarctic reached its maximum in post-war years, the whaling matériel in operation was 51 shore stations, 7 floating factories and 210 catchers.

In the survey below is recorded the number of whales killed on grounds outside the Antarctic during the period 1937/38–1955/56. Figures for the Antarctic whaling are also included in order to give the total world whaling results during this period.

Season	Total of whales killed	In Antarctic			On other grounds		
		Total	Baleen whales	Sperm- whales	Total	Baleen whales	Sperm- whales
1937–38.....	54,902	46,039	45,172	867	8,863	5,967	2,896

1951–52.....	49,832	35,237	29,752	5,485	14,595	8,523	6,072
1952–53.....	45,009	30,653	28,321	2,332	14,356	7,111	7,245
1953–54.....	53,642	34,872	31,993	2,879	18,770	8,106	10,664
1954–55.....	55,075	37,654	31,864	5,790	17,421	7,618	9,803
1955–56.....	58,126	38,580	31,606	6,974	19,546	7,930	11,616

During the season 1955–56 the total number of whales killed in the Antarctic and on grounds outside the Antarctic reached a record figure of 58,126, or about 3,000 animals more than during the preceding season. This increase was entirely due to a greater sperm-whale catch. In 1955–56 the total number of sperm-whales killed on all whaling grounds was 18,590 against 15,593 in 1954–55. The number of baleen whales killed was about 39,500 in both seasons.

On the whaling grounds outside the Antarctic the total catch in 1956 increased by 2,125 whales, of which 1,813 were sperm-whales and 312 baleen whales. The total catch amounted to 19,546 whales, which is the highest number ever reached—apart from the season 1951 when 4 floating factories with 50 catchers were operating off the coast of Peru and killed 6,350 sperm-whales. During all the post-war seasons there has been a steady increase in the total catch outside the Antarctic. Since 1949 this increase has been entirely due to the exceptionally great rise in the sperm-whale catch. The number of sperm-whales killed increased from 4,938 in 1949 to 11,616 in 1956. During these 8 seasons the baleen whale catch was comparatively constant, varying between 7,100 and 8,500 whales only.

In the annexed tables *j–z*, pages 22–30, particulars are given for a series of years in respect to the individual grounds in each area outside the Antarctic. In the following a few comments are made on the catch results from the most important grounds.

North Atlantic and Arctic. The total catch in the North Atlantic and Arctic kept on the same level in 1956 as in the preceding seasons from and including 1952. During each of these seasons whaling was carried on chiefly from Norway, the Faroe Islands and Iceland, and the total catch was about 800 to 900 whales. During the 4 previous seasons 1948–1951, with a considerable catch from Newfoundland, the total catch in North Atlantic and Arctic varied between 1,575 and 1,751 whales. Two shore stations on Newfoundland, which had been operating for a number of years, were closed in 1952.

The catch off the Norwegian coast was reduced from 392 whales in 1954 to 266 in 1955 and further to 206 in 1956—the lowest result during the post-war years. Only 3 shore stations were operating here in 1955 and 1956 as against 4 in 1954. The catch from Iceland, however, increased from 334 whales in 1954 to 400 in 1955 and 440 in 1956.

The fin-whale is the most important species of whales killed in North Atlantic and Arctic, and during all the post-war years the fin-whale catch has been dominating in these waters. A not insignificant number of blue-whales was killed during the years 1948–1951, but later this blue-whale catch has decreased considerably, to a great extent on account of the above mentioned reduced activity from Newfoundland. From and including the summer 1955 the taking of blue-whales in North Atlantic and Arctic was prohibited for a period of 5 years. Denmark and Iceland, which have protested against this prohibition, in 1955 caught 1 blue-whale from the Faroe Islands, 10 blue-whales from Iceland and 1 from West Greenland, and in 1956 8 blue-whales from Iceland and 1 from West Greenland. The other countries have submitted to the said prohibition.

An unusually high number of sperm-whales was killed in North Atlantic and Arctic in 1956, viz. 277 against 142 in 1955. Of these sperm-whales 97 were caught from the Faroe Islands and 95 from Iceland.

Coast of Africa. Whaling in the African waters was in 1956, as in the preceding season, carried on from the coast of Natal only. From this ground a total of 1,229 whales were killed as against 1,310 in 1955. There was a strong decline in the number of sperm-whales and sei-whales killed, but on the other hand the fin-whale catch increased by 136 animals and brought the oil production on the Natal ground up to 51,105 barrels, from 45,206 barrels in the previous season. One single company was operating from one shore station with 12–13 catchers during the 3 last seasons.

The whaling operations off the coast of Africa have been reduced considerably since 1951. During each of the seasons 1949–1951, when the humpback catch on the Congo ground was of special importance, the total African catch varied between 4,000 and 5,000 whales.

Pacific North (excl. Japan, Bering Sea, Kamtchatka and Kuril Islands). In 1956 whaling was resumed from California. From this ground no whaling had been carried on since 1951, when one shore station with 2 catchers killed 40 whales, of which 26 sperm-whales. The catch in 1956, also from one shore station with 2 catchers, amounted to 145 whales, of which 133 were humpbacks. This was the highest number of humpbacks killed on the California ground since 1919–1924, when the annual catch of humpbacks varied between 124 and 600 animals.

The catch from British Columbia showed a marked decrease in 1956, as one shore station with 6 catchers killed 375 whales only. During each of the two preceding seasons the same shore station, also with 6 catchers, killed 630 whales. There was a strong decline in the sperm- and sei-whale catch on this ground in 1956, but this decline was, however, to some extent compensated by a greater fin-whale catch.

Japan and Korea. During the post-war years no whaling has been carried on from Korea. On the coast of Japan 20 shore stations were operating with 25 catchers in 1956. This is the same number of catchers employed in these waters as during all post-war seasons from and including 1946. The total number of whales killed in 1956 amounted to 3,284, as against 2,387 in 1955. Most of the whales are sperm-whales, and in 1956 the number of sperm-whales killed increased by about 600. The baleen whale catch in the Japanese waters consists mainly of fin- and sei-whales. In 1956 the number of sei-whales killed increased by about 300 animals. The total catch in 1956 was the highest ever reached on the coast of Japan.

Bering Sea. The catch in the Bering Sea by Japanese floating factories has increased considerably during recent seasons. Two floating factories with 14 catchers in 1956, with 13 catchers in 1955 and 10 catchers in 1954 killed 3,168, 2,652 and 2,217 whales, respectively. In 1953 and 1952 one

floating factory with 4 catchers killed 701 and 319 whales, respectively. The majority of the catch in the Bering Sea consists of fin-whales and sperm-whales, but it also includes a not insignificant number of blue-whales, viz. 70 in each of the seasons 1956 and 1955, 145 in 1954 and 91 in 1953. During the 3 last seasons the fin-whale catch in the Bering Sea was far greater than on any other ground outside the Antarctic.

Kamtchatka. The Sovjet Russian floating factory, which has been operating off Kamtchatka for a series of years, in 1956 caught 1,119 whales or approximately the same number as during each of the 3 preceding seasons. The catch on this ground is mainly a sperm-whale catch.

Kuril Islands. In 1956 whaling from the Kuril Islands was carried on from 4 shore stations with 15 catchers, and the number of whales killed was 2,179. During each of the preceding seasons back to 1950 5 shore stations were operating with 12–13 catchers, and the annual number of whales killed was about the same, varying only between 1,633 and 2,105 animals. As on the Kamtchatka ground, the whales killed from Kuril Islands are mainly sperm-whales. In 1956 45 blue-whales were killed from Kuril Islands, compared with 27 in 1955 and 23 in 1954.

Chile. During all the post-war years 2 shore stations have been operating on the coast of Chile. The total number of whales killed by 12 catchers in 1956 was 1,633, as against 1,298 by 13 catchers in 1955. This increase was mainly due to a greater sperm-whale catch, but also to a greater blue-whale catch. The blue-whale catch, which is quite considerable on the coast of Chile, in 1956 amounted to 209 animals as against 150 in 1955. The number of blue-whales as well as of sperm-whales killed in 1956 were the highest ever recorded on this ground.

Australia. In 1956 whaling was commenced from a new shore station on Norfolk Island, and this station was allotted a quota of 150 humpbacks. The company, which during previous seasons had carried on whaling from its shore station at Point Cloates, was in 1956 operating from the shore station at Carnarvon and had a quota for this season of 1,000 humpbacks, i.e. the same as the aggregate number of the two stations in 1955. The total Australian catch in 1956 from 5 shore stations with 11 catchers amounted to 2,051 whales, of which 1,989 were humpbacks.

Table 2, page 30, shows the production of by-products in the Antarctic and on the individual grounds outside the Antarctic during the last two seasons.

The chief by-products are whale meat and whale meal, of which the total production in 1955–56 were 87,900 tons and 69,400 tons, respectively. Of these quanta 45,800 tons whale meat and 43,200 tons whale meal were produced in the Antarctic.

Annex.

¹⁾ Specification for countries of the British Commonwealth is given on the second following page. ²⁾ Including the catch of two Norwegian expeditions hired by Germany—in 1937/38 2,158 whales, and in 1938/39 1,658 whales. ³⁾ In the total figures for the seasons 1937/38, 1938/39 and 1949/50—1951/52 the whaling results for the following countries are included: For Germany in 1937/38—5,839 whales = 10.6 per cent and in 1938/39—5,036 whales = 11.1 per cent. For France in 1949/50—2,193 whales = 4.9 per cent of all whales killed, in 1950/51—4,079 whales = 7.3 per cent and in 1951/52—436 whales = 0.9 per cent.

* The years 1940/41-1945/46 are omitted. Total number of whales killed: 23,633, 8,014, 8,372, 6,445, 5,919 and 19,384, respectively.

¹⁾ Barrels = 170 kg. (Barrel = abt. 1/6 long ton. 1 long ton = 1,016 kg.). ²⁾ Specification for countries of the British Commonwealth is given on next page.

³⁾ The figures include the catch of two Norwegian expeditions hired by Germany—in 1937/38 180,750 barrels, and in 1938/39 118,383 barrels. ⁴⁾ In the total figures for the seasons 1937/38, 1938/39 and 1949/50—1951/52 the whaling results for the following countries are included: For Germany in 1937/38—369,727 barrels of oil = 10.2 per cent, and in 1938/39—374,149 barrels of oil = 12.4 per cent. For France in 1949/50—98,660 barrels of oil = 3.9 per cent of the total oil production, in 1950/51—145,721 barrels = 4.9 per cent, and in 1951/52—16,485 barrels = 0.6 per cent.

* Figures for the years 1940/41-1945/46 are omitted. Total oil production: 1,268,081 barrels, 213,948 barrels, 212,307 barrels, 224,207 barrels, 304,318 barrels, and 948,715 barrels, respectively.

**Table h.—Whaling results for countries of the British Commonwealth.

¹⁾ Bottlenoses. ²⁾ Calculated. ³⁾ Different kinds of small whales. ⁴⁾ Minke-whales. ⁵⁾ 20 Minke-whales and 1 bottlenose. ⁶⁾ From and incl. 1948 a great number of pilot whales (potheads) has been taken by one station. For the seasons, when the station caught "long whales", the production results of the pilot whales have been included (seasons 1948, 1951, 1952, 1953, and 1955).
