## P R E F A C E

The present publication, International Whaling Statistics No. XXXVII comprises the whaling operations during the Antarctic season 1954–55 and on grounds outside the Antarctic in the calendar year 1955.

Statistical data relating to the size and sex of the whales killed has not been received from the following grounds and companies: *Azores, Madeira, "José Lopez Gutierrez S.A.", Algeciras, Spain, "Industrial Ballenera de Corcubion", Canelinas, Spain, "Cia. Chilena de Pesca y Comercio de Mc. Hnos", Chile, and the Peruvian companies in Peru.*

With these exceptions the statistics, to the best knowledge of the Committee, include all whaling operations carried on in 1955.

When preparing the introductory tables of this publication the following corrections have been made:

The Committee has been informed that "*Den kgl. grønlandske Handel*" has built a shore station in Touqussaq in the Davis Strait in 1950. In earlier years the whales were brought in to the nearest harbour, where the inhabitants flensed and lemmmed the animals. We have therefore included 1 shore station in the tables as from 1950.

Further, the Committee has received particulars for 1953 and 1954 from the Peruvian companies, and the statistics have been revised accordingly.

The Japanese catch with floating factories in the Bering sea was in earlier publications listed under Kamtchatka. In the present publication this catch is listed under Bering Sea, while the Russian catch with one floating factory is, as usual registered under Kamtchatka.

Oslo, November 1956.

*Einar Vangstein.*

## INTRODUCTION

The present publication comprises the world aggregate whaling results in 1955, i.e. the catch in the Antarctic during the season 1954–55 and the catch on grounds outside the Antarctic in the calendar year 1955. Detailed information about the whaling activity in the Antarctic during the season 1954–55 has been given in International Whaling Statistics No. XXXVI. The present volume gives specifications of the operations on grounds outside the Antarctic in 1955.

Two Norwegian floating factories killed altogether 39 sperm-whales in the Southern Atlantic on their way to the Antarctic in the autumn 1955.

The Japanese company “*Kyokuyo Hoge Co. Ltd.*”, which, among its other activities, carries on pelagic whaling in the Northern Pacific, exchanged in 1955 its floating factory “*Baikal Maru*” for the larger factory ship “*Kyokuyo Maru*”.

“*Arctic Fishery Products Ltd.*”, *Trinity Bay, Newfoundland*, has been engaged in whaling since 1948, but the results are included in the statistics only in years when large whales are killed. The company catches considerable quantities of small whales, such as Minke-whales and pilot-whales (potheads). In 1955, however, it also caught 2 fin-whales.

The following companies, operating in 1954, did not resume whaling in 1955:

“*Industrial Maritima, S.A.*”, Spanish Morocco,

“*A/S Norsk Hvalfangst*”, Norway, and

“*Olympic Whaling Company, S.A.*”, Panama, using factory ship “*Olympic Challenger*” off Peru.

On the other hand, the company “*Soc. Industrial de Produtos da Pesca Ltda.*”, Santa Catarina, Brazil, resumed whaling in 1955.

In 1955 whaling was carried on from the following grounds outside the Antarctic:

*Africa*: Natal, South Atlantic.

*Brazil*: Paraiba, Santa Catarina.

*North Atlantic and Arctic*: Azores, Madeira, Spain, Norway, Faroe Islands, Iceland, West Greenland, Newfoundland.

*Pacific North*: British Columbia, Bering Sea, Kamtchatka, Kuril Islands, Japan.

*Other grounds*: Peru, Chile, Australia, New Zealand.

These are the same grounds of operation as in 1954 with the exception of South Atlantic, Santa Catarina and Spanish Morocco.

Table *a*, page 11, shows that whaling outside the Antarctic in 1955 was carried on from 47 shore stations, the same number as in the previous

season. The number of floating factories and catchers employed was, however, reduced to 3 and 134 respectively—from 4 and 141 in 1954. During the season 1951, when the whaling outside the Antarctic reached its maximum in post-war years, the whaling matériel in operation was 51 shore stations, 7 floating factories and 210 catchers.

In the survey below is recorded the number of whales killed on grounds outside the Antarctic during the period 1937/38–1954/55. Figures for the Antarctic whaling are also included in order to give the total world whaling during this period.

Season	Total of whales killed	In Antarctic			On other grounds		
		Total	Baleen whales	Sperm- whales	Total	Baleen whales	Sperm- whales
1937–38.....	54,902	46,039	45,172	867	8,863	5,967	2,896

1950–51.....	55,795	33,997	29,029	4,968	21,798	8,502	13,296
1951–52.....	49,832	35,237	29,752	5,485	14,595	8,523	6,072
1952–53.....	45,009	30,653	28,321	2,332	14,356	7,111	7,245
1953–54.....	53,642	34,872	31,993	2,879	18,770	8,106	10,664
1954–55.....	55,075	37,654	31,864	5,790	17,421	7,618	9,803

The aggregate number of whales killed on all grounds during the season 1954–55 amounted to 55,075, i.e. 1,433 whales more than during the preceding season. This increase was entirely due to the large sperm-whale catch in the Antarctic, which in 1954–55 increased by nearly 3,000 animals and reached a maximum figure of 5,790.

On the whaling grounds outside the Antarctic the total catch in 1955 decreased by 1,349 whales, and this decrease referred to baleen- as well as sperm-whales. The baleen whale catch in 1955, however, maintained the level of the preceding seasons as far back as to 1949. During these 7 seasons the number of baleen whales killed varied between 7,100 and 8,500. The decrease in the sperm-whale catch on grounds outside the Antarctic in 1955 was due to the fact that no floating factory was operating off the coast of Peru during this season. In 1954 one floating factory with 12 catchers killed 2,348 sperm-whales on this ground. In 1951, when the sperm-whale catch outside the Antarctic was also exceptionally high, 4 floating factories with 50 catchers were in activity off the coast of Peru and killed 6,350 sperm-whales. Apart from these catches by floating

factories on the Peruvian grounds in 1951 and 1954, there has been a steady increase in the sperm-whale catch on grounds outside the Antarctic during all the seasons since 1949. In the 1949-season 4,938 sperm-whales were killed as against 9,803 in 1955.

In the annexed tables *j-z*, pages 20–28, particulars are given for a series of years in respect to the individual whaling grounds in each area outside the Antarctic. In the following a few comments are made on the catch results from some of the more important grounds.

*North Atlantic and Arctic.* The total catch on the whaling grounds in the North Atlantic and Arctic increased slightly in 1955. This was due to a larger activity from the Faroe Islands, where 5 catchers were engaged instead of 2 during the previous season, and also to some larger catch from Iceland. On the other hand, the catch off the Norwegian coast in 1955 was reduced to 266 whales—the lowest result in the post-war years. Only 3 shore stations were operating here in 1955 as against 4 during all the previous years since 1947.

During each of the last 4 seasons the total catch in the North Atlantic and Arctic has been about 800 to 900 whales, while the results during the 4 preceding seasons 1948–1951 were about twice as high. The main reason for this decline is the closing in 1952 of 2 shore stations, which had been operating off Newfoundland for a series of years, and also a strongly reduced catch from the Faroe Islands.

The fin-whale is the most important species of whales killed in North Atlantic and Arctic, and during all the post-war years the fin-whale catch has been dominating in these waters. A not insignificant number of blue-whales was killed during the years 1948–1951, but later this blue-whale catch has decreased considerably, to a great extent on account of the above mentioned reduced activity from Newfoundland. The figures for the North Atlantic and Arctic grounds, excluding Newfoundland and West-Greenland, however, show that the average yearly number of blue-whales killed during the last years 1952–1955 was 14 as against 37 during the period 1948–1951.

*Coast of Africa.* Whaling in the African waters was in 1955 carried on from the coast of Natal only, resulting in 1,310 whales as against 1,023 whales in 1954. The catch from Natal, however, consists to a great extent of sperm-whales, and the increase in the total catch in 1955 is mainly due to an increased sperm-whale catch. One single company was operating from one shore station, with 13 catchers in 1955 and 12 in 1954. In 1953 and previous seasons this company carried on whaling from 2 shore stations.

The whaling operations off the coast of Africa have been reduced considerably since 1951. During each of the seasons 1949–1951, when the humpback catch on the Congo ground was of special importance, the total African catch varied between 4,000 and 5,000 whales.

*Pacific North* (excl. Japan, Bering Sea, Kamtchatka and Kuril Islands). As in the 2 previous seasons whaling was in 1955 carried on from British Columbia only. One shore station, employing 6 catchers killed a total of 630 whales, i.e. exactly the same result as obtained in 1954. A great number of these whales were sperm-whales, thus in 1954 226 and in 1955 320.

*Japan and Korea.* From Korea no whaling has been carried on since the war. On the coast of Japan 19 shore stations were operating with 25 catchers in 1955. This is the same number of catchers employed in these waters as during the previous seasons from and including 1946. The total number of whales killed in 1955 amounted to 2,387, or much the same as in 1954. In both years about 1,500 of the whales killed were sperm-whales.

*Bering Sea.* The Japanese operations with floating factories in the Bering Sea, which in earlier publications have been included under Kamtchatka, are now recorded separately in a new table r, page 25. The total catch in the Bering Sea by 2 floating factories was in 1955 2,652 whales and in 1954 2,217 whales. During the seasons 1953 and 1952 one floating factory with 4 catchers killed 701 and 319 whales, respectively. The catch in the Bering Sea consists mainly of fin-whales and sperm-whales. A quite considerable number of blue-whales has also been killed on this ground—in 1955 70, in 1954 145 and in 1953 91.

*Chile.* During all the post-war years 2 shore stations have been operating on the coast of Chile. The total number of whales killed by 13 catchers in 1955 was 1,298, and by 12 catchers in 1954 1,328. The catch is mainly a fin-whale and sperm-whale catch, but it includes also a not insignificant number of blue-whales. In 1955 150 blue-whales were killed as against 70 in 1954 and 172 in 1953.

*Australia.* As in the previous season 5 shore stations with 9 catchers carried on whaling from Australia in 1955. The catch amounted to 1,854 whales (of which 1,846 humpbacks) as against 2,039 whales (2,038 humpbacks) in 1954. The reason for this decrease was that two companies operating on the west coast had got their whaling quota reduced by 100 animals each.

*Table z*, page 28, shows the production of by-products in the Antarctic and on the individual grounds outside the Antarctic during the last two seasons.

The chief by-products are whale meat and whale meal, of which the total production in 1954–55 were 77,900 tons and 55,300 tons, respectively. Of these quanta 42,700 tons whale meat and 35,500 tons whale meal were produced in the Antarctic.

## Annex.

<sup>1)</sup> Barrels = 170 kg. (Barrel = abt.  $\frac{1}{6}$  long ton, 1 long ton = 1,016 kg). <sup>2)</sup> Specification for countries of the British Commonwealth is given on next page.

<sup>3)</sup> The figures include the catch of two Norwegian expeditions hired by Germany—in 1937/38 180,750 barrels, and in 1938/39 118,383 barrels. <sup>4)</sup> In the total figures for the seasons 1947/48—1953/54 the whaling results for the following countries are included: For France in 1949/50—98,660 barrels of oil = 3.9 per cent of the total oil production, in 1950/51—145,721 barrels = 4.9 per cent, and in 1951/52—16,485 barrels = 0.6 per cent; for Peru in 1950/51—2,015 barrels = 0.1 per cent, in 1951/52—1,941 barrels = 0.1 per cent, in 1952/53—22,108 barrels = 0.9 per cent, in 1953/54—31,168 barrels = 1.1 per cent, and in 1954/55—31,335 barrels = 1.1 per cent; for Spain in 1947/48—956 barrels = 0 per cent, in 1948/49—2,009 barrels = 0.1 per cent, in 1949/50—2,482 barrels = 0.1 per cent, in 1950/51—4,529 barrels = 0.2 per cent, in 1951/52—5,787 barrels = 0.2 per cent, in 1952/53—2,960 barrels = 0.1 per cent, in 1953/54—4,375 barrels = 0.1 per cent, and in 1954/55—5,250 barrels = 0.2 per cent.

\* Figures for the years 1940/41-1944/45 are omitted. Total oil production in 1940-41 1,268,081 barrels, in 1941-42 213,948 barrels, in 1942-43 212,307 barrels, in 1943-44 224,207 barrels, in 1944-45 304,318 barrels.
