## Preface

The Norwegian Standard Classification of Education (NUS) was initially prepared by Statistics Norway in 1970 and subsequently revised in 1973, 1989 and in 2000. The 2000 edition is referred to as NUS2000.

In working on the classification a reference group was established consisting of representatives from Statistics Norway and a number of major institutions for which the classification was designed. The reference group provided input on major issues raised in connection with the development of the classification. A draft classification was circulated for comments in May 2000 among a long list of major users and public institutions.

To report educational statistics for international use, NUS2000 also includes codes from the International Standard Classification of Education ISCED97/ISCED 2011.

Reforms in the educational sector since 2000 have caused a need for updating the NUS2000 accordingly. Updated editions of the Norwegian Standard Classification of Education are published twice a year.

Nuria Barrabés had the main responsibility for preparing the classification in 2000, while Greta Kjølstad Østli has been responsible for updates and maintenance. Anne Marie Rustad Holseter, Geir Nygård, Torill Vangen, Sadiq Kwesi Boateng and Terje Risberg have made contributions. Responsible for this publication is Head of Division Arvid Olav Lysø, Division for Education Statistics.

Information about The Norwegian Standard Classification of Education (NUS2000) is available on Statistics Norway's website at [www.ssb.no](http://www.ssb.no)

## **Abstract**

The Norwegian Standard Classification of Education (NUS2000) is above all primarily meant for use in official Norwegian statistics. The main purpose is to define and classify educational activities according to level and field of education.

The main changes in relation to previous classifications are: A new division of levels, a field classification that is the same across all levels and clarifications of which educational programmes are included in each level.

Education is also at the international agenda, and Statistics Norway is contributing in submitting education statistics to international organisations. Data is used in publications in which the education statistics of various countries are compared. To best ensure international comparisons a key is made to link codes in NUS2000 to codes ISCED97/ISCED 2011.

This version of the document contains revisions from NUS1989 to NUS2000 as well changes that has affected the classification in the period after it was completed in 2000.

# 1. Introduction

## 1.1. Background

The Norwegian Standard Classification of Education (NUS) was prepared for the first time by Statistics Norway (SSB) in 1970 and later revised in 1973 and 1989. Since 1989 the Norwegian education system has undergone a number of extensive reforms, with Reform 94, Reform 97 and Quality Reform (2003) being the main ones. Reform 94 and Reform 97 resulted in the establishment of several new educational activities, changes in content and duration of existing activities and the discontinuation of several activities. Due to the changes implemented after the reforms in 1994 and 1997 and the fact that the classification had been in use for 10 years, a comprehensive review was necessary. The Norwegian Standard Classification of Education was updated in 2000 and is referred to as NUS2000.

The NUS2000 represents a break with previous versions of NUS. The revision of NUS has several objectives. The classification shall provide a sound basis for the production of education statistics and analysis of the education system. It is therefore important that the classification is complete and provides a fair picture of the Norwegian education system. At the same time, it has been important to limit the need for maintenance for the classification to secure its relevance for a long time.

## 1.2. Changes in relation to previous education classifications

The NUS2000 has undergone considerable changes in relation to previous education classifications. The main changes include a new level classification (1<sup>st</sup> digit), a field classification (2<sup>nd</sup> - 4<sup>th</sup> digits) that is consistent across all levels of education, and a detailed classification of subjects within each education field (5<sup>th</sup> - 6<sup>th</sup> digits). The fact that the field classification is the same at all levels offers major advantages in terms of a general understanding of how the Norwegian Standard Classification of Education is structured, and enables field-based analyses of the education system.

## 1.3. Effect of Reform 97 on the new classification

The Reform 97 altered the old nine-year compulsory education system to a 10-year system by lowering the school age to six. The vast majority of people born in Norway as of today have nine years or less of compulsory education. It was decided that Reform 97 should be used as a basis for the class level classification and for purposes of simplification; no differentiation is made between those with different lengths of basic schooling. As a result, those who do not have 10 years of compulsory education are treated as though they do. People who completed compulsory schooling before Reform 97, and have completed three years of upper secondary school, are thus placed in class level 13, even though they really have 12 years of schooling.

## 1.4. Other reforms and changes

Two reforms in the educational sector have affected the education system since the creation of NUS2000. The Quality Reform of 2003 affected the structure of higher education in Norway as three-year Bachelor degrees and five-year Master degrees were introduced. The Knowledge Promotion Reform was introduced in 2006, and affected primary, lower secondary and upper secondary education and training. The impact of the Post-secondary Vocational Education Act from 2003, the revision of the International Standard Classification of Education from ISCED 1997 to ISCED

2011 and ISCED-F 2013 and a continuous update of educational programmes are included in NUS2000.

## 2. Definitions and principles

### 2.1. Definitions

Education can be defined as the transmission of skills and knowledge. In a statistical context it is important to delimit the education concept to make it statistically measurable. NUS2000 covers only educational activities that take place within the official education system, i.e. educational activities that have a formal academic framework and a predefined duration.

For statistical analyses it is important to use a set criteria to classify educational activities. On this basis, an educational activity is defined as

- One or more educational courses that are approximately equal with respect to academic content and level placement.

### 2.2. Classification of educational activities

#### 2.2.1. Degree of detail

The classification was previously very detailed, placing greater demands on maintenance and users' knowledge of the classification. The NUS2000 is less detailed, more user-friendly and requires a lower degree of maintenance than the old classification. Below is a short summary of the principles behind this reduction.

#### 2.2.2. General principles

The NUS2000 functions as a classification norm for all educational activities in Norway and for education completed abroad by Norwegian residents. The classification is not complete for educational activities abroad, but to include codes that can be used for coding such education. This is important for covering needs in education statistics and in various registers, such as the database of the highest level of education in the population (BU).

The classification includes all educational activities completed within the ordinary education system in Norway. All courses and subjects under the Upper Secondary Education Act have specific codes, while other upper secondary educational activities use aggregate codes specified by broad, narrow or detailed fields of education. Aggregate codes can be identified with the aid of the code "99" as the 5<sup>th</sup> and 6<sup>th</sup> digit, or with the help of a separate classification for code type (see chapter 3.2.1).

The most noticeable change in aggregate codes from the previous version of NUS is found in higher education, where most educational activities that are shorter than two years and do not lead to any degree or qualification, have been merged into aggregate codes. These aggregate codes include units such as foundation courses, intermediate courses, major subjects, semester units and other one-year units or shorter courses at higher institutions. One of the main reasons for having aggregate codes is the increasing modulation of higher education. Students have been given more options to organize and pursue their education by combining different educational activities of a shorter or longer duration. One consequence of this freedom of choice is that it is more difficult to determine what a completed education is.

The text of the aggregate codes for level 6 higher education all end with "-", undergraduate level". An example is: 611101 "English, undergraduate level". As mentioned above, foundation courses, intermediate courses, major subjects, semester units and other one-year units may be coded under this code.

With respect to supplementary courses in higher education there has been a substantial reduction in the number of codes compared with NUS89. A few aggregate codes have been made for supplementary education in the various fields.

### 2.2.3. Historical codes

The NUS2000 has only retained codes not in use if they are interesting for describing the historical development in the education system. The degree of detail in these codes is limited. The historical codes that remain – but are no longer used – are as previously marked with an asterisk '\*':

## 3. Code system and structure

### 3.1. Structure of the Norwegian Standard Classification of Education

The Norwegian Standard Classification of Education is a 6-digit code system that classifies educational activities by level and field. The classification has the following structure:

1 <sup>st</sup> digit	Level
2 <sup>nd</sup> digit	Broad field of education
2 <sup>nd</sup> - 3 <sup>rd</sup> digits	Narrow field of education
2 <sup>nd</sup> - 4 <sup>th</sup> digits	Detailed field of education
1 <sup>st</sup> - 6 <sup>th</sup> digits	Individual educational programme

The 1<sup>st</sup> and 2<sup>nd</sup> digits can be used for independent classifications while the 2<sup>nd</sup> - 3<sup>rd</sup>, 2<sup>nd</sup> - 4<sup>th</sup> and 1<sup>st</sup> - 6<sup>th</sup> digits in combination can be used as specific classifications in coding educational activities and in the production of official education statistics.

#### 3.1.1. Level

The Norwegian Standard Classification of Education has nine levels along with a value for unspecified level. The level classification is meant to provide the best possible picture of the structure of the Norwegian education system. The level classification is structured in the following way:

Tripartition of levels	Level	Level name	Class level
	0	No education and pre-school education	Under school age
Compulsory education	1	Primary education	1 <sup>st</sup> - 7 <sup>th</sup> class level
	2	Lower secondary education	8 <sup>th</sup> - 10 <sup>th</sup> class level
Intermediate education	3	Upper secondary, basic	11 <sup>th</sup> - 12 <sup>th</sup> class level
	4	Upper secondary, final year	13 <sup>th</sup> class level +
	5	Post-secondary not higher education	14 <sup>th</sup> class level +
Higher education	6	First stage of higher education, undergraduate level	14 <sup>th</sup> - 17 <sup>th</sup> class level
	7	First stage of higher education, graduate level	18 <sup>th</sup> - 19 <sup>th</sup> class level
	8	Second stage of higher education (postgraduate education)	20 <sup>th</sup> class level +
	9	Unspecified	

A number of changes were undertaken in the NUS2000 compared with previous education classifications. Firstly, a clearer tripartitioning of levels has been

introduced. This division functions as a standard classification of levels in most publications and analyses of education.

The most noticeable change in the level classification is the redefinition of level 5. In the NUS2000 this level has been reserved for education at the level between upper secondary education and higher education. Education at this level can neither be classified as upper secondary education nor higher education, and is placed more correctly in post-secondary not higher level. This change means a break in the education statistics, because some educational programmes and educational groups have been moved up one level, while others have been moved down. This applies to programmes at technical vocational schools, which, with the exception of the third year, have been moved from level 4 to level 5.

To provide room for level 5 the number of levels in higher education has been reduced from four to three. A higher education lasting four years or less is classified as level 6, while a higher education lasting more than four years is classified as level 7. Previously, programmes lasting two years or less were placed on a separate level (level 5). The change in the level classification also provides a better picture of the structure of the higher education system.

As before, postgraduate programmes are placed at level 8. Internal changes have also been made at some levels. Previously, level 3 was used for only the first year of upper secondary education. In the NUS2000 both Foundation Course and Advanced Course I – courses under the Upper Secondary Education Act – are classified as level 3. Level 4 is reserved for Advanced Course II and III under the Upper Secondary Education Act.

Level placement of individual educational programmes was determined on the basis of an overall evaluation of admission requirements, duration and competence. The evaluation of the competencies provided by the various types of programmes is based on approval from the Ministry of Education, Research (KD).

The table below details the allocation of programmes at each level:

### 3.1.2. Broad field of education

The broad field of education is a general classification of the academic content of educational activities. Each broad field of education comprises programmes that are as academically homogenous as possible. Classification of broad field of education is the same at all levels of education in the NUS2000.

In addition to name changes of some broad fields of education, some changes in content have been made, compared with previous classifications. Broad field of education "Business and administration" (4) has been removed from "Social sciences and law" (3) because this category had become disproportionately large. The division also provides greater homogeneity. "Transport and communications, safety and security and other services" (8) has been redefined as an aggregate category into which the old broad field of education "Transport and communications" (6) has been placed.

Broad fields of education in the NUS2000 are defined as follows:

- 0 General programmes
- 1 Humanities and arts
- 2 Teacher training and pedagogy
- 3 Social sciences and law
- 4 Business and administration
- 5 Natural sciences, vocational and technical subjects
- 6 Health, welfare and sport
- 7 Primary industries
- 8 Transport and communications, safety and security and other services
- 9 Unspecified broad field of education

### 3.1.3. Narrow and detailed field of education

Following an evaluation of academic needs, each broad field of education is divided into nine narrow fields of education, which are further divided into nine or less detailed fields of education groups. The main objective is to group programmes that deviate relatively little with respect to academic content.

The classification into narrow fields of education as well as detailed fields of education applies to all levels of education. Since educational offerings are not the same at all levels, certain narrow and detailed fields of education will only be used at certain levels, for example medicine and veterinary subjects.

Below is a schematic overview of the breakdown by broad, narrow and detailed field of education in the NUS2000:

### 3.1.4. Individual educational programmes

Classification of individual educational programmes has been done largely on the basis of educational offerings in the 1999 academic year. Historical programmes are only retained as separate codes if they contain historically interesting information. Otherwise they are merged with codes that are closely related with respect to level and subject content (see chapter 2.2.2.).

### 3.1.5. Unspecified programmes

In the NUS2000 the digit "9" means "other" or "unspecified" level, broad field, narrow field, detailed field and individual educational programmes.

Level	"9"= "unspecified"
Broad field	"9"= "unspecified"
Narrow field	"9"= "unspecified"
Detailed field	"9"= "other"
Individual programmes	"9"= "unspecified"

## 3.2. Additional variables and classifications

### 3.2.1. Type of code

Type of code describes whether the NUS2000 code is a code for individual educational programmes or an aggregate code. Aggregate codes are coded 1, and individual educational programmes are coded 2.

Aggregate codes consist of several educational activities at different class levels and/or duration. In higher education it applies to shorter educational activities that do not result in any diploma or qualification per se. For example, Foundation courses, intermediate courses, semester units and major subjects.

Individual educational programmes are educational activities with a similar range of subjects/subject content, class level and duration. In higher education it applies to all programmes resulting in a diploma or qualification, for example a Bachelor degree or college diploma.

### 3.2.2. Class level

We can differentiate between class levels for individual educational programmes and class levels for aggregate codes. Individual programmes have predetermined class levels, while programmes that come under the same aggregate code may have different class levels. Class levels are calculated from level 1 (primary education), where the first year of primary school is class level 1. Compulsory education (levels 1 and 2) comprises class levels 1-10. The first year of upper secondary school (level 3) is class level 11. Higher education (levels 6-8) starts from class level 14. The highest possible class level is 22 (postgraduate education).

### 3.2.3. Duration

Duration is given in the number of months for education levels 1-5, except for post-secondary vocational education. A school year is 10 months. Consequently, 20 months is equivalent to two years of schooling, 30 months is three years of schooling etc.

For education programmes in higher education (levels 6-8), duration is given in credit points. For post-secondary vocational education at level 5, duration is given in post-secondary vocational credit points. Sixty credit points is equivalent to 60 ECTS (European Credit Transfer System) or one year of full-time studies. 60 post-secondary vocational credit points is also equivalent to one year of full-time studies.

For aggregate codes the number of credit points is given as a maximum number of credit points, because they contain educational activities of varying duration and take place on different class levels.

### 3.2.4. Areas of study- /education programmes

An area of study- /education programme code is used to classify educations at level 3-5. This is a course standard classification primarily for simplifying the presentation of official education statistics. After Reform 94 the area of study codes and the classification has been changed. The new classification consists of many different areas of study, and is divided into directions that give respectively entrance qualifications for higher education and vocational qualifications. As part of the introduction of the new reform in upper secondary education, The Knowledge Promotion from 2006, the term education programme is induced.

The different areas of study and education programme codes, both from before and after the induction of Reform 94 and The Knowledge Promotion, are schematic presented below. The columns show the change in the numbers of different areas of study from before and after Reform 94. NUS2000 consists of the areas of study codes in the column “after Reform 94” and the education programme codes for The Knowledge Promotion:

	Before Reform 94	After Reform 94
<b>Area of study</b>	01 General subjects 03 Home crafts and aesthetic subjects 05 Commercial subjects 07 Craft and industry 09 Fishery science and maritime studies 10 Agrivocational subjects 11 Health education and social science 17 Domestic science 19 Sport and physical education	<b>General areas of study (leading to qualification for higher education):</b> 21 General and business studies 22 Music, dance and drama 23 Sports and physical education  <b>Vocational areas of study (leading to occupational skills):</b> 31 Health and social care studies 32 Agriculture, fishing and forestry 33 Arts, crafts and design studies 34 Hotel and food-processing trades 35 Building and construction 36 Technical building trades 37 Electrical trades 38 Engineering and mechanical trades 39 Chemical and processing trades 40 Woodworking trades 41 Media and communication 42 Sales and service 50 Technical vocational school including school year 2006/07 99 Course for practice candidates, unspecified area of study (not in use)

### 3.2.5. Course level after Reform 94 / The Knowledge Promotion

The course level code provides an overview of the different course levels at upper secondary and post-secondary vocational education. As the Knowledge Promotion was introduced in 2006, the naming of the course levels were changed:

Reform 94	The Knowledge Promotion
Foundation course	Upper secondary level 1 (Vg1)
Advanced Course I	Upper secondary level 2 (Vg2)
Advanced Course II	Upper secondary level 3 (Vg3)

These codes are used:

- A = Foundation course/upper secondary level 1 (Vg1)
- D = Basic competence/alternative education
- H = Advanced Course I/upper secondary level 2 (Vg2)
- I = Special pathway
- K = Two or three-year course (not foundation course over two years)
- P = Advanced Course II/upper secondary level 3 (Vg3)/ apprenticeship
- T = Apprenticeship taken after completion of Advanced Course II/after upper secondary level 3
- U = Technical vocational school including school year 2006/07
- Z = Course for private practice candidates (not in use)

### 3.2.6. Competence in upper secondary education and training

The competence code provides an overview of alternative qualification for higher education or vocational skills in upper secondary education and training. In upper secondary education and training, a distinction is drawn between college preparatory and vocational education. College preparatory training places the most emphasis on theoretical knowledge, and leads to entrance qualifications for higher education. The vocational programmes lead to an occupation and provide occupational qualification with a vocational certificate. The education programs leading to vocational qualification can be obtained in different ways. The main way is two years in school and two years in a company and that the qualification is documented with a vocational certificate. If it is not possible to get an apprentice-training place, the education can be completed with advanced course II/-apprenticeship in school. The competence is documented with a vocational certificate. For some vocational education programs the qualification is obtained after a three-year education programme in school that results in a certificate documenting the obtained vocational competence. In addition there are differences in the length on training in school before the apprenticeship. Vocational education lasting more than four years, and where the training school is more than two years, is given a separate code to indicate the long duration. It is also possible to build on the vocational competence to achieve Studies Competence.

There are five competence codes:

- 1 General studies competence
- 2 Vocational studies competence documented by vocational certificate, apprenticeship begins after two years of school tuition
- 3 Vocational studies competence documented by high school diploma
- 4 Working towards vocational studies competence, in third year of school before starting apprenticeship
- 5 Vocational studies competence with vocational certificate, apprenticeship begins after three years of school tuition

**3.2.7. Higher education classification**

The higher education classification is used to classify level 6 to 8 programmes. This is a rough standard classification, which above all is meant to simplify the presentation of official education statistics. The degree titles bachelor, master and ph.d. were introduced in connection with the Quality Reform in higher education of 2003. Below is an overview of the higher education classification:

Level 6	Level 7	Level 8
01 Preparatory examination	31 Postgraduate education	70 Ph.d.
02 Undergraduate education	32 Cand.philol. degree	81 Dr.philos.
03 Other one-year foundation courses	33 Cand.polit.. degree	82 Dr.polit.
04 College diploma, two-year	34 Cand.scient./cand.real. degree	83 Dr.scient.
05 Engineering, two-year foundation programme	35 Cand.jur. degree	84 Dr.juris./dr.legis.
05H College diploma, two-year	35M Master degree, law	85 Dr.med.
06 Other two-year studies, foundation programme	36 Cand.med.. degree	86 Dr.theol.
07 College degree, three-year	37 Cand.agric. degree	87 Dr.techn.
08 General teacher/Primary and lower secondary teacher education, foundation programme	38 Cand.musicae. degree	88 Dr.odont.
08B Bachelor degree, teacher education (Rudolf Steiner College)	39 Cand.theol. degree	89 Dr.med.vet.
09 Pre-school teacher, foundation programme	40 Cand.san. degree	90 Dr. agric.
09B Bachelor degree, pre-school teacher / kindergarten teacher education	41 Cand.oecon. degree	91 Dr.oecon.
10 Specific subject and vocational teacher, foundation programme	42 Cand.psychol. degree	92 Dr.ing.
10B Bachelor degree, specific subject and vocational teacher	43 Cand.sociol. degree	93 Dr.art.
11 Engineering, three-year foundation programme	44 Cand.sosion. degree	94 Dr. psychol.
11B Bachelor degree, engineering,	45 Cand.act.. degree	95 Other postgraduate degrees (licentiates)
12 Nursing, foundation programme	45M Master degree, actuarial science	
12B Bachelor degree, nursing,	46 Cand.techn. degree

20 Supplementary education for nurses	54 Business and economics programme, CEMS Master's degree	
21 Supplementary education for health care staff other than nurses	54M Business and economics graduate/ Master degree, economics and administration	
22 Other supplementary education, up to two years	55 Graduate engineering degree	
23 Teacher training programme	55M Master degree, science and technology	
24 Business and economics degree	56 Master of Science	
25B Bachelor degree, general studies	56M Master of Science	
26B Bachelor degree, humanities/arts (not four-year)	57 Master of Philosophy	
27B Bachelor degree, teacher training and pedagogy (not general teacher, primary and lower secondary teacher, pre-school teacher, specific subject and vocational teacher)	57M Master of Philosophy	
28B Bachelor degree, social sciences/legal studies	58 Master of Arts	
29B Bachelor degree, business/administration	58M Master of Arts	
30B Bachelor degree, natural sciences/vocational and technical subjects (not engineering)	59 Master of International Business	
96B Bachelor degree, health/welfare/sport (not nursing and health care included in 13B)	59M Master of International Business	
97B Bachelor degree, primary industries	60 Master of Business Administration	
98B Bachelor degree, transport/communication/ safety and security/ other services	60M Master of Business Administration	
99B Bachelor degree, unknown area of study	61 Master of Management	
69M Master degree, one-year, lower level	61M Master of Management

	63M Other master degrees	
	64 Master of Laws	
	64M Master of Laws	
	65 Other postgraduate education, not supplementary education	
	66 Supplementary education, up to two years	
	67 Specialist training for doctors and dentists	
	68 Supplementary education for nurses at level 7	
	71M Master degree, general studies	
	72M Master degree, humanities/arts	
	73M Master degree, teacher training and pedagogy	
	74M Master degree, social sciences/legal studies (not law)	
	75M Master degree, business/administration (not business and economics degree)	
	76M Master degree, natural sciences/vocational and technical subjects (not graduate engineering degree/ master degree, science and technology)	
	77M Master degree, health/welfare/sport (not pharmacy and odontology)	
	78M Master degree, primary industries	
	79M Master degree, transport/communication/safety and security/other services	
	80M Master degree, unknown area of study	

### 3.2.8. Degree mark

The degree mark code give an overview of some of the degree titles introduced with the Quality Reform within higher education of 2003. It consists of the following codes:

B = Bachelor

H = College degree in engineering

M = Master

### 3.2.9. Post-secondary vocational education

This classification is used for educations approved in the law of post-secondary vocational education of 20 March 2003. Approved post-secondary vocational education is coded 10. This classification is in use from school-year 2005/06.

Educational programmes in post-secondary vocational education are coded according to individual educational programmes from 2014 to better align with ISCED 2011. Before 2014, aggregate codes were used. All two-year programmes in post-secondary vocational education are classified at ISCED 2011 level 5, and programmes shorter than two years are classified at ISCED level 4. All programmes in post-secondary vocational education are coded at NUS2000 level 5.

## 4. International Standard Classification of Education, ISCED 1997 (ISCED97)

In the 1970s UNESCO designed the International Standard Classification of Education (ISCED) to collect, compare and present comparable indicators and statistics on education, both in individual countries and internationally. ISCED was revised in 1997 and in 2011. See chapter 5 for information about ISCED 2011.

ISCED97 is an education standard classification constructed on the basis of education systems in many countries. The primary intention is to use ISCED97 to compare international education statistics. ISCED97 is not as detailed as national education classifications, which describe in detail the education system of an individual country. Because ISCED97 is less detailed, it cannot cover all national requirements of an education standard classification. A national education classification must be complete for the educational offerings that exist, and cover existing relevant complementary dimensions and distinctive features of the country in question. An international classification cannot cover all existing distinctive national features. In conjunction with the revision of the Norwegian Standard Classification of Education, a link between the NUS2000 and ISCED97 was prepared. Each 6-digit NUS2000 code (aggregate codes and individual educational programmes) refers to an ISCED97 code with associated complementary dimensions.

### 4.1. Structure of ISCED97

ISCED97 is organized according to level and field of education in the same way as the Norwegian Standard Classification of Education. In addition, ISCED97 has four complementary dimensions (Destination, Orientation, National Degree Structure and Duration). These are used only for certain levels of education. The classification has the following structure:

1st digit: Level

2nd digit: Broad field of education

3rd digit: Narrow field of education

4th digit: Detailed field of education

Position 5: Destination  
 Position 6: Orientation  
 Position 7: Duration  
 Position 8: National degree structure

Digits 2-4 may be called a field code. The four last complementary dimensions are placed in the 5th (Destination), 6th (Orientation), 7th (Duration) and 8th (National degree structure) position.

#### 4.1.1. Level

ISCED97 consists of seven levels:

- 0 Pre-primary
- 1 Primary
- 2 Lower secondary
- 3 Upper secondary
- 4 Post-secondary non-tertiary
- 5 First stage of tertiary education
- 6 Second stage of tertiary education

#### 4.1.2. Fields of education and training

Each educational activity is classified based on the academic content of the programme. Fields of education in ISCED97 are 3-digit. The first digit indicates Broad field. ISCED97 consists of nine broad fields.

Broad fields in ISCED97 are defined as follows:

- 0 General programmes
- 1 Education
- 2 Humanities and arts
- 3 Social sciences, business and law
- 4 Science, mathematics and computing
- 5 Engineering, manufacturing and construction
- 6 Agriculture and veterinary science
- 7 Health and welfare
- 8 Services
- 9 Unknown

As shown in the table above, there are differences between the Norwegian classification of broad fields of study (see section 3.1.2) and the international classification. In the Norwegian classification, vocational and technical subjects are included with natural science subjects (broad field 6 in the NUS2000). In ISCED97, science subjects make up a separate field (4), while vocational and technical subjects are divided among several different fields. The order of the fields of study is also different for the two classifications.

Broad fields of education are divided into narrow fields, which are in turn divided into detailed fields of education and training. ISCED97 consists of 25 different narrow fields and approximately 80 detailed fields.

Below is a schematic presentation of broad fields, narrow fields and detailed fields in ISCED97:

## **9 Unspecified**

99 Unspecified  
 999 Unspecified

### **4.1.3. Destination**

The first complementary dimension, Destination, indicates the type of subsequent education or labour market positions for which graduates are eligible. There are three different codings: A, B and C:

- A. The programme is meant to lead to further general education.
- B. The programme is meant to lead to further vocational training.
- C. The programme is meant to lead directly to the labour market (vocational programmes).

In ISCED97 the complementary dimension Destination is used on levels 2, 3, 4 and 5.

### **4.1.4. Orientation**

Programme Orientation is the degree to which the programme is specifically oriented towards a specific class of occupations or trades. Orientation is divided into Vocational (1), Pre-vocational (2) and General (3), depending on to what

degree the programme is general/academic or has a more vocational nature. In Norway only the General and Vocational categories are used.

- 1 Vocational: Completion of this form of education provides labour market-relevant vocational skills in a specific occupation.
- 2 Pre-vocational: Programmes mainly aimed at preparing students for further vocational or technical training. Completion of this form of education does not lead to an occupation and does not provide technical skills relevant to the labour market. At least 25 per cent of the subject content must be vocationally oriented or of a technical nature. Much of the content in education is of a general nature.
- 3 General: Programmes that are not designed to prepare students for entry into specific occupations in the labour market or for entry into specific vocational or technical education programmes. Less than 25 per cent of the subject content is vocational or has a technical content.

In ISCED97 the complementary dimension Orientation is used on level 2, 3, 4 and 5.

#### 4.1.5. Duration

Duration refers to the cumulative theoretical duration at the relevant level of education. Duration codes have different definitions for the different levels of education.

Below we show how Duration is structured:

Level 3	1	Short	6 months or less	
	2	Medium	7 to 12 months	
	3	Long	13 to 24 months	
	4	Very long	25 months	
Level 4	1	Short	24 months or less	
	2	Medium	25 to 36 months	
	3	Long	37 to 48 months	
	4	Very long	49 months or more	
Level 5			<b>Credit points</b>	<b>Months</b>
	1	Short (2 to less than 3 years)	0-179	0-29
	2	Medium (3 to less than 5 years)	180-299	30-49
	3	Long (5 to less than 6 years)	300-359	50-59
	4	Very long (6 years or longer)	360+	60+

#### 4.1.6. National degree structure

National degree structure is divided into four categories and reflects the degree structures of the member country. The category a person is placed into therefore depends on the degree structure in their individual member country. National degree structure is divided into the following categories:

Intermediate  
First  
Second  
Third and further

Norway uses only the "First" (coded 1) and "Second" (coded 2) categories. The complementary dimension National Degree Structure is used at level 5 in ISCED97. Graduate subject, mag.art., mag.scient., cand.scient., cand.real., cand.polit., cand.philol., most master degrees and other higher education at level 7

(not graduate engineering) are coded "Second". All other higher education is coded as "First".

## 5. International Standard Classification of Education, ISCED 2011/ISCED-F 2013

The ISCED 2011 classification was adopted by the UNESCO General Conference in November 2011, replacing ISCED97. The ISCED 2011 classifies both level and orientation for enrolments (ISCED-Programmes), and for graduates and attained level of education (ISCED-Attainment). The fields of education in ISCED 2011 are classified according to the ISCED fields of education and training 2013 (ISCED-F 2013) – see chapter 5.2.

In the Norwegian Standard Classification of Education, a link between NUS2000 and ISCED2011 was made. Each 6-digit NUS2000 code (aggregate codes and individual educational programmes) refers to two ISCED 2011 codes, ISCED-Programmes and ISCED-Attainment.

From 2014, ISCED 2011 is used to compile, compare and report international education statistics.

### 5.1. ISCED 2011 – level and category

ISCED 2011 is organized by level of education in a similar manner as NUS2000 and ISCED97. A new feature in ISCED 2011 is the three-digit coding systems for education programmes (ISCED-Programmes or ISCED-P) and levels of educational attainment (ISCED-Attainment or ISCED-A).

*Classification of education programmes* provides the detailed codes for ISCED-P levels, categories and sub-categories that are assigned to education programmes.

*Classification of educational attainment* provides the detailed codes for ISCED-A levels, categories and sub-categories that are assigned to educational qualifications and similar measures of successful completion of education programmes.

Detailed codes for both ISCED-P and ISCED-A follow the same structure:

1<sup>st</sup> digit: Level  
2<sup>nd</sup> digit: Category  
3<sup>rd</sup> digit: Sub-category

#### 5.1.1. Level

The number of levels in ISCED 2011 has increased from ISCED 97 in recognition of the expansion of early childhood education and restructuring of higher education.

## 5.1.2. Main changes in ISCED 2011

**ISCED 0 – Early childhood education**

ISCED level 0 in ISCED 2011 covers early childhood education for all ages, including very young children. Early childhood educational development programmes (code 010) are generally designed for children younger than 3 years. It is introduced as a new category in ISCED 2011 and is not covered by ISCED 1997. Pre-primary education (code 020) corresponds exactly to level 0 in ISCED 1997.

**ISCED 1 – Primary education**

ISCED 2011 level 1 corresponds to level 1 in ISCED 1997.

**ISCED 2 – Lower secondary education**

ISCED 2011 level 2 corresponds to level 2 in ISCED 1997.

**ISCED 3 – Upper secondary education**

ISCED 2011 level 3 corresponds mainly to level 3 in ISCED 1997. All preparatory courses in Norway, some previously coded at level 4 in ISCED 1997, are allocated to ISCED level 3 in ISCED 2011.

**ISCED 4 – Post-secondary non-tertiary education**

ISCED 2011 level 4 corresponds largely to level 4 in ISCED 1997. Two-year post-secondary vocational education in Norway is classified at ISCED 2011 level 5, where post-secondary vocational education shorter than two years is classified at level 4.

**ISCED 5 – Short-cycle tertiary education**

Two-year post-secondary vocational education in Norway is classified at ISCED 2011 level 5. In ISCED 1997 all post-secondary vocational education was classified at ISCED 1997 level 4. This split of post-secondary vocational education is only valid in ISCED 2011 and in an international context.

**ISCED 6 – Bachelor's or equivalent level**

All bachelor programmes and university college degree programmes are included in ISCED-Programme (ISCED-P) level 6 in Norway, but graduates from university college degree programmes (2 years) are classified at ISCED-Attainment (ISCED-A) level 5 (as criteria of duration (3 years) is not met).

**ISCED 7 – Master's or equivalent level**

ISCED 2011 level 7 corresponds to level 7 in ISCED 1997.

**ISCED 8 – Doctoral or equivalent level**

ISCED 2011 level 8 corresponds to level 8 in ISCED 1997.

## **5.2. The structure of ISCED fields of education and training 2013 (ISCED-F 2013)**

Each educational activity is classified based on the academic content of the programme. Fields of education in ISCED-F 2013 are 4-digit and follow this structure:

1<sup>st</sup> -2<sup>nd</sup> digits: Broad field  
 3<sup>rd</sup> digit: Narrow field  
 4<sup>th</sup> digit: Detailed field

There are 11 Broad fields, 29 Narrow fields and about 80 Detailed fields of education and training.

Broad fields:

00 Generic programmes and qualifications  
 01 Education  
 02 Arts and humanities  
 03 Social sciences, journalism and information  
 04 Business, administration and law  
 05 Natural sciences, mathematics and statistics  
 06 Information and Communication Technologies (ICTs)  
 07 Engineering, manufacturing and construction  
 08 Agriculture, forestry, fisheries and veterinary  
 09 Health and welfare  
 10 Services

### 5.2.3. The main changes between ISCED 1997 og ISCED-F 2013

- a. The splitting of Field 22 'Humanities' in ISCED 1997 into two narrow fields: 022 'Humanities (except languages)' and 023 'Languages'.
- b. The splitting of Broad Group 3 'Social sciences, business and law' in ISCED 1997 into two broad fields: 03 'Social sciences, journalism and information' and 04 'Business, administration and law'.
- c. The creation of a new narrow field 052 'Environment' within the broad field 05 'Natural sciences, mathematics and statistics' by splitting Field 42 'Life sciences' in ISCED 1997 and combining with some of Field 62 'Agriculture, forestry and fishery'.

## 6. Code list

On the following pages is a list of all education codes in the classification. In the first column is each NUS2000 code. The code has a hierarchical structure and follows the structure reviewed in chapters 1-3. Column 2 contains explanatory text for the education programmes the NUS2000 code represents. Some NUS2000 codes include additional comments in *italics* with more specific information about programmes included in the code. Columns 3-14 show the various additional characteristics in the NUS2000: code type (3), class level range (4), duration (5), post-secondary vocational credit points (6), post-secondary vocational education (7), credit points (8), area of study/education programme (9), course level code (10), competence code (11), higher education classification (12), degree mark (13), and historical code (14).

Column 15 contains the NUS2000 code's corresponding ISCED97 code (level and broad field of education). Columns 16-19 represent ISCED97's complementary dimensions: ISCED97 destination (16), ISCED97 orientation (17), ISCED97 duration (18), and ISCED97 national degree structure (19).

The columns 20, 21 and 22 contain the NUS2000 code's corresponding ISCED2011 codes: ISCED 2011 programme (20), ISCED 2011 attainment (21) and ISCED-F 2013 Field of education and training 2013 (22).

At the end of the publication is an alphabetical subject index of aggregate codes and individual educational programmes and their respective NUS2000 codes.
