

Manufacturing Statistics 2007

This series consists mainly of primary statistics, statistics from statistical accounting systems and results of special censuses and surveys, for reference and documentation purposes. Presentation is basically in the form of tables, figures and necessary information about data, collection and processing methods, and concepts and definitions. In addition, a short overview of the main results is given. The series also includes Statistical Yearbook of Norway

Preface

The publication contains annual statistics for enterprises in mining, quarrying and manufacturing, and information about statistical production and definitions of important concepts and variables. The statistics include information about number of local kind-of-activity units (local KAUs), employment, production value, value added, compensation of employees and investment figures classified by industry division, employment group and county.

The annual manufacturing statistics offer first and foremost detailed structural figures for manufacturing. This requires a long time of collection as well as preparation. In addition to annual manufacturing statistics Statistics Norway produce numeral monthly and quarterly statistics (monthly production index and turnover figures, quarterly investments, orders and stocks figures and business tendency surveys), which all are published for the first time in the Today's Statistics with the most current figures.

Principal figures are published Statistics Norway's webpage, www.ssb.no/english.

NOS Manufacturing Statistics 2007 is also available on Internet.

This publication has been prepared by Senior Executive Officer Julie Margrethe Slensvik, with contributions from advisor Geir Soland and advisor Nils Petter Skirstad. Head of Division is Lise Dalen McMahon.

1. Background and purpose

The manufacturing sector is one of the most important production sectors in the economy. For that reason there is a great need for versatile and detailed manufacturing statistics. Politicians, leaders of private and public enterprises, project managers and professional and industrial organisations use structural statistics for manufacturing for their work. A reliable general view of the composition of and the development trends in Norwegian manufacturing is very important in the economic and political debate.

Manufacturing statistics offer a detailed overview on employment, production value, production costs, value added and investments by industry and regions. The statistics are published annually as Today's Statistics and in the series Norwegian Official Statistics (Manufacturing Statistics). In recent years, public authorities as well as private users have expressed a greater need for special excerpts from the statistics.

Manufacturing statistics also comprise one of the basic foundations for the annual national accounts. The national accounts system is among other things aiming at mapping out the dependency that exists between the different areas of the economy. National accounts also make up the data foundation for macro-economic planning models. These models are important tools to calculate future development of the economy, and therefore have a central position in the Ministry of Finance's work with the national budget.

Norwegian manufacturing statistics are coordinated with corresponding statistics from the EEA, and in accordance with the EEA agreement aggregated data are reported to Eurostat, the EU's Statistical Office.

2. Statistics production

2.1. Coverage

*Local kind-of-activity units
(Local KAUs)*

The annual manufacturing statistics cover local KAUs in manufacturing, mining and quarrying, as defined by the Norwegian Standard Industrial Classification (SIC). Information on oil and gas extraction is not included.

Enterprises

The enterprise population has the local KAU population as a starting point and includes all enterprises (see definition under 3.1) with main industry in manufacturing, mining and quarrying.

2.2. Sampling

The statistical population consists of all active enterprises in the reference year. The population is divided into strata (non-overlapping, exhaustive groups) by industry divisions and employment. For some strata all enterprises are required to turn in information whereas for other strata a representative sample is drawn. These enterprises together comprise the sample that are asked to report a full set of information, i.e. the Standard Industry Forms (SIFs) and a supplementary questionnaire.

2.3. Data sources

The SIFs are either attached to the supplementary questionnaires or submitted electronically via the Directorate of Taxes. Information about the units that are not included in the sample is found in the following sources:

- Electronically delivered SIFs to the Directorate of Taxes
- The Register of Company Accounts in Brønnøysund
- The VAT Register

- The Register of Employees and Employers

This detailed survey of accounting data is combined with the additional information from the various registers and the structural survey of Statistics Norway to form a basis for estimating the financial structures of the different industries, i.e. population totals.

2.4. Collection of data

The supplementary forms are collected via the Internet or by postal questionnaires. The questionnaires are sent out in April/May after the end of the reference year, with a response deadline of four to five weeks. Enterprises failing to respond to the initial inquiry are sent written follow-up letters for up to six months from the first deadline. Enterprises that do not respond are fined.

For enterprises not included in the sample turnover figures and other essential accounting data are obtained from the SIFs submitted electronically via the Directorate of Taxes or from annual accounts in the Register of Company Reports in Brønnøysund. Turnover figures are also obtained from enterprises in the VAT Register.

In this way we obtain information on all enterprises in the population.

2.5. Response burden

An inquiry carried out in 2004 showed that information gathering and completing the questionnaire takes on average 175 minutes (sums weighed for the proportion of one KAU- and multi KAU-businesses). The results can be found in the Eurostat publication *Developing methods for assessing perceived response burden*¹.

2.6. Control and revision

The data collected are sent through a thorough revision on micro level. Consistency controls are conducted between enterprise figures and the SIF. Controls are carried out to check for large deviations between the manufacturing structural statistics and the manufacturing commodity figures, and between the manufacturing structural statistics and industrial energy use statistics. Investment figures are controlled against the quarterly investment statistics. Figures are also checked towards the short term statistics for manufacturing.

2.7. Estimations

In 2007 the population consisted of 20 650 local KAUs classified in manufacturing, mining and quarrying. Tables are based on data from these locals KAUs.

| | Number of local KAUs | Production value in NOK bill. | Employment |
|------------------------|----------------------|-------------------------------|------------|
| Population | 20 650 | 797.3 | 275 944 |
| Sample | 4 167 | 696.4 | 216 599 |
| Small local KAUs | 16 483 | 100.9 | 59 345 |

The local KAUs in the population from which Statistics Norway has collected data, make up the net sample and came to 4 167 in 2007. These local KAUs made up 87.3 per cent of total production value and 78.5 per cent of total employment in manufacturing, mining and quarrying.

¹<http://epp.eurostat.ec.europa.eu/portal/page/portal/quality/documents/DEVELOPING%20METHOD%20FOR%20ASSESSING%20PERCEIVED%20RESPONSE%20BURD.pdf>

16 483 local KAUs were so-called small local KAUs. These units do not receive questionnaires, as they employed less than ten at the time the selection was made. The small local KAUs made up about 21.5 per cent of the employment in manufacturing, mining and quarrying in 2007, and 12.7 per cent of the production value.

The figure for production value for the small local KAUs is like other data from this group an estimated figure. The estimation methods are mainly based on estimations with basis in the variables available from other sources, inter alia the VAT Register and Company Accounts.

3. Concepts, variables and classification

3.1. Definition of the main concepts

A **local kind-of-activity unit** (Local KAUs) is defined as a functional unit which at a single physical location is engaged mainly in activities within a specific activity group. This definition conforms to the one framed by ISIC Rev. 3 and the NACE Rev. 1.1.

An **enterprise** is defined as an organisational unit comprising all economic activities engaged in by one and the same owner. Hence an enterprise is a legal entity covering one or more productive units (local KAUs). An enterprise is the smallest organisational unit required to keep accounts.

The following guidelines are used in order to divide the activity of an enterprise into separate local KAUs:

- Activities engaged in by an enterprise in different municipalities are treated as separate local KAUs.
- Activities in different industry classes (4-digit) can be classified as separate local KAUs when necessary for statistical purposes, even if the activity is located at the same site. To divide a local unit into several local KAUs each of the activities has to be of a certain size, normally engaging at least 5 persons. Some exceptions have been made to this rule, dependent on the feasibility of this on the hands of the respondents.

Auxiliary units are locally distinct units which mainly provide services for one or more local KAUs in the enterprise of which the unit is a part. Typical examples are central and local administrative offices, sales offices, stock departments etc. These units furnish separate reports, but they are not regarded as separate local KAUs. Auxiliary units furnish reports on persons employed, compensation of employees, working expenses, investments, etc.. An auxiliary unit is grouped under the same industry as the local KAUs within the enterprise or groups of companies to which the unit mainly render its services. If the unit serves various local KAUs of different industry groups, more auxiliary units may be organised within a locally limited area. The value of the services from such auxiliary units (the value of production) is set equal to compensation of employees and cost of goods and services consumed. These services are entered as cost of goods and services consumed by the receiver (internal delivery). The statistics for 2007 contain information on 600 auxiliary units, with a total of 12 726 persons employed.

3.2. Definition of the main variables

Characteristics or variables are collected from enterprises using forms or annual accounts. The forms are adjusted to the local KAUs' connection with enterprises and sizes. One of the main goals of manufacturing statistics is to distribute structural data as value added, employment and investments by region and

industry. A multi-unit enterprise will normally conduct activities in several industries and/or in several municipalities. For this reason we collect more characteristics on local KAU level on multi-unit enterprises than single unit enterprise for which there is identical information on enterprise and local KAU.

The questionnaires are as much as possible designed and tied up with the standard account plan and the Standard Industry Form. Our questionnaire for multi-business enterprises can be found as an annex (in Norwegian).

Ownership. The local KAUs are classified by the type of ownership of the enterprise defined by the juridical responsibility for its liabilities. The types of legal organisations are divided into the following subgroups:

Sole proprietorship, i.e. a one-man enterprise in which the owner is responsible with all his capital for the liabilities of the enterprise.

General partnership, i.e. an enterprise with two or more owners being responsible with all their capital for the liabilities of the enterprise.

Private limited company, i.e. an enterprise in which the owners' liabilities are limited to invested share capital.

Public limited company, i.e. an enterprise in which the owners' liabilities are limited to invested share capital, and which is often quoted on the stock exchange.

Limited liability, i.e. an enterprise in which the owners' liabilities are limited to invested capital.

Other type of ownership. Included are institutions etc. and other types of ownership not mentioned above.

Persons employed (employment) include all persons working in the local KAU, also persons on sick leave, vacation and strike. However, laid-off personnel and persons on military leave are excluded. The number of employees in the structural statistics shows an average of the number that has been employed throughout the year.

Unlike the register-based employment statistics, where persons are only counted in their main job, in structural statistics a person may have more than one job. The register-based employment statistics are based on the number of persons employed, while the structural statistics provide information on the companies and enterprises included in the population. Therefore, the employment figures will not be directly comparable with figures in other employment statistics.

Hired labour from employment agencies is not included in the employment figures.

Only individual proprietors and partners actively engaged in the work of the local KAU are included. Working shareholders in corporations and co-operatives are counted as ordinary employees.

Employees comprise salaried managers and directors as well as transport workers, messengers, newsmen, caretakers and cleaning personnel.

Production value (value of gross output) is defined as the sum of:

- (1) Production on own account
- (2) Repair work done for customers
- (3) Contract work
- (4) Other income

(5) Gross profit on sale of commodities

1) Production on own account is defined so as to include all goods produced by the local KAU during the year of inquiry for sale or delivery to other local KAUs, whether actually delivered, entered into stock or stocks of work in process. Goods produced for delivery to other local KAUs owned by the same enterprise are included, and so are goods produced under lease in other local KAUs.

The sales value of finished products includes freight, packing and public expenses except outgoing value added tax (VAT).

For deliveries within the enterprise, market prices have been used to the largest possible extent. If the enterprise does not know such prices (for goods not sold or purchased by the enterprise), the goods are valued at cost price plus normal profit, or at sales value minus normal gross profit for deliveries to retail stores owned by the enterprise. The production of refined oil products (f.o.b. refinery) is valued at world market prices.

Exceptions have been made from the general rule that production on own account should comprise goods produced for sale for some groups.

Advertising revenue is included in production on own account for the publishing industry. Value of services rendered is considered to be production on own account for the printing industry.

(2) Repair work done for customers also includes repair work carried out for other local KAUs within the enterprise. Receipts for material furnished by the local KAU is included. Expenditure on repair work performed on the local KAU's own structures and machinery is not included.

(3) Contract work concerns transformation of raw materials furnished by the customers, including cost of material held by the local KAU.

(4) Other income includes numerous income types such as income on commissions, licence income, remuneration for consultant activities, know-how, sale from own canteens, income from freight services done for others etc. Interest and dividends and similar financial income are not included.

Rental receipts comprise gross earnings from lease or hire of buildings, structures, machinery, transport equipment and other fixed durable assets.

(5) Gross profit on sale of commodities. Many manufacturing local KAUs are engaged in merchandising, i.e. they buy and sell goods without any further processing or transformation. Gross profit of goods sold in the same condition as purchased is defined as sales \div cost of the goods. VAT is not included. When the amount of this merchandise is relatively substantial, the merchandising activity is treated as a separate local KAU, classified to retail or wholesale trade.

Cost of goods and services consumed is defined as the sum of:

- (1) Raw and auxiliary materials and components used as direct input in the manufacturing process and consumption of purchased ready-made containers and packaging material
- (2) Contract work done by others
- (3) Fuels and electricity consumed
- (4) Repair work done by others
- (5) Other costs

(1) *Raw and auxiliary materials, containers and packaging material etc.*, comprise materials consumed at the local KAU or delivered to others for contract work, and also intermediary products received from other local KAUs of the same enterprise. Raw materials etc. received from others for contract work is excluded.

Auxiliary materials are all goods consumed during the manufacturing process, other than raw materials, components, fuel or packaging material. Auxiliary materials do not form part of the final product. Included here are explosives, lubricants, polish, tools and appliances etc. taken into use during the year of inquiry and not normally lasting for more than one year. Operating supplies such as soap, detergents and cleaning preparations, toiletries and other necessary maintenance equipment are excluded here.

The raw materials consumed are valued at current replacement cost. Indirect taxes payable by the local KAU is excluded. Subsidies received in connection with the consumption of raw and auxiliary materials are included, that is to say not deducted the supplier's invoice amount.

Expenditure for transport - except when done by own employees and equipment - concerning insurance, landing, freight, forwarding services, customs duties etc. are included.

Containers and packaging material etc. are valued at purchase prices. Included here are also items manufactured by other local KAUs owned by the same enterprise, valued at internal clearing prices, or alternatively, at market prices. Inputs in the production of containers and packaging material are only included in so far as the products are consumed by the local KAU itself.

(2) *Contract work done by others* means transformation or processing of raw materials furnished by the respondent. Included are also specialist work performed on products made by the respondent. The figure reported comprises payments to other local KAUs for transformation or processing of raw materials held by the respondent.

(3) *Fuels and electricity consumed* are valued at purchase prices. Excluded are fuel and electricity used for heating employee-occupied dwellings supplied by the enterprise.

(4) *Repair work done by others* covers repairs of buildings, structures, machinery, transport equipment and other fixed durable assets owned or controlled by the local KAU.

(5) *Other costs* include items in the current account. Freight and forwarding connected to sale are included. Rental costs are included and consist of expenses for rent of buildings, plants, machinery, transport means and other operating items. Furthermore advertisement, telephone, postage, representation, per diem expenses etc. are also included; in addition also payment for know-how, project work, research and development, patent and licence costs, insurance and guarantee costs. Liabilities on losses and liabilities in connection with worn-out operating equipment, financial expenses, taxes etc. are not included.

Value added is - if nothing else is stated - defined at market prices and equals gross value of production (value of gross output), less cost of goods and services consumed, excluding VAT.

Value added at factor prices equals value added at market prices including subsidies, less indirect taxes except VAT, investment levy and national insurance premium.

Compensation of employees comprises salaries and wages in cash and kind, other benefits for the employees and social expenses levied by law. Salaries and wages comprise all payments, whether in cash or in kind, made by the employer in connection with work done, to all persons included in the count of employees. It includes taxes, national insurance premium and pension contributions payable by the employee, but deducted by the employer. Bonuses, production awards, holiday allowances and wages paid during periods of sickness, military leave or other absences, and commission earned by salesmen and representatives, are also included.

Other benefits for the employees comprise employers' contributions to private pension, family allowance, health and casualty insurance, life insurance and similar schemes.

Compensation of employees does not include compensation to owners of sole proprietorships or general partnerships, or payment to family members without fixed wages.

The share of compensation of employees is defined as the local KAU's total compensation of employees in per cent of value added at factor prices. A compensation share equal to 100, means that the value added exactly covers the compensation of employees.

Gross investments is defined as (1) acquisition of fixed durable assets, new and used, with an expected productive life of more than one year, less (2) receipts from sales of fixed durable assets. Own account investment is included in (1).

Acquisition of machinery, transport equipment etc. is recorded at the time when the assets are received, whether or not put into operation during the year. Purchase of buildings, structures, land etc. is treated alike.

The cost of acquisition means actual expenses built up during the year, including investment levy, irrespective of time of payment.

Gross investment figures comprise only investments in capital owned by local KAUs within mining, quarrying or manufacturing. Investment expenditure made in manufacturing etc. by local KAUs belonging to other activity groups, e.g. real estate companies, is not included.

Operating income. Operating income comprises sales income, provision income, rental income, public subsidies and other income connected to the operation. Items connected to the enterprise's main activity as well as its secondary activities are included. Public expenses are excluded. Internal deliveries between the enterprise's local KAUs/divisions are not included.

Operating costs. Operating costs consist of commodity consumption, wage and salary costs, ordinary depreciation and write-downs and other costs connected to sale, production and administration. Deductible VAT is subtracted.

Operating profit/loss. Operating profit/loss equals operating income minus operating costs.

Profit for the year. Profit for the year equals the operating profit/loss in addition to the result of financial incomes and financial costs and the result of extraordinary income and costs, taxes deducted.

The connection between operating incomes and gross production value and operation costs and commodity costs are as follows:

Operating income - cost of sold merchandise + changes in stocks of finished goods and goods being processed – profit from sale of operating equipment + duties - subsidies
 = *Gross value of production.*

Operating costs - wage and salary costs- cost of sold merchandise - ordinary depreciations and write-downs - changes in stocks of finished goods and goods being processed
 = *Cost of goods and services consumed.*

3.3. Standard classifications

The classification is in accordance with the Norwegian Standard Industrial Classification (SIC2002), which is based on the industrial classifications approved by the EU (NACE Rev. 1.1) and the UN (ISIC Rev. 3). A new version of Norwegian industry classification (SIC2007) was implemented in January 2009. This survey is affected as from the publishing of preliminary figures for 2008. You can read more about SIC2002 on our webpage, <http://www.ssb.no/english/>.

4. Sources of error and uncertainty

Errors may and do occur in many steps of the data-capture process. Typical sources for errors are respondents filling in forms incorrectly, registration errors, optical reading errors and revision errors. Other errors originate in the registers, different principles for accounting and possibly different interpretation of terms. Many errors and inconsistencies are discovered and corrected through a thorough revision process and through manual and machine checks.

Since data from most of the local KAUs with less than ten employees are estimated, there is bound to be more uncertainties connected to these data. The uncertainties will vary for the different variables because some of the variables are better covered in registers, e.g. employment and certain account variables.

5. Comparability and coherence

5.1. Spatial comparability and comparability over time

Preliminary figures are published while data are still under revision, and may therefore deviate from the final figures that are published within 18 months of the end of the reference year. Preliminary data for the enterprises in the sample that have not yet responded at the time of publishing are estimated by using other sources.

For *final figures*, electronic data files exist as far back as the reference year 1966. The data is mainly comparable when it concerns coverage and variables.

When making comparisons with previously published figures it must be kept in mind that older data may have been corrected during later revisions. Updating of industry codes in the Register of Establishments and Enterprises may also have entailed revisions for some of the industries. These changes are not back dated.

Changes in accounting legislation, classification practice, samples, details of the terms etc. can also be responsible for comparability being limited.

There have been several important changes for the mining, quarrying and manufacturing structural statistics. 1) In 1989 there was a change in treatment of small units, which led to about 1 000 local KAUs being removed and with that a reduction in employment figures of about 3 000. 2) In the 1990s, Statistics Norway

implemented a new industry standard (SIC94), which differed substantially from the previous standard from 1983. The first publication conforming to SIC94 was published in 1995, and contained data for the reference years 1989-1993. Several relocations of local KAUs were done, both within the manufacturing industry and between the manufacturing industry and other activity groups. Amongst other thing, sheltered workshops were relocated from manufacturing to social services, and casting of concrete yields was relocated from manufacturing to building and construction. Recycling was established as a new manufacturing industry (relocated from tertiary industry). Together, all the changes led to a decrease of 10 000 employees within mining, quarrying and manufacturing, and a fall of respectively 6.1 per cent and 1.2 per cent for the production value and value added. 3) As of 1996, production value includes freight, 4) and asphalt plants were regrouped from 23 Coal and refined petroleum products to industry division 26 Non-metallic mineral from 1996. 5) In 1996 an adjustment was made according to the EU's regulation concerning structural business statistics. As a result, enterprises have become more important with respect to collection and presentation of the statistics. 6) As of 1998, workshops within an enterprise were reclassified from manufacturing to transportation. This concerned amongst other repairs on locomotives and airplanes. 7) The last important change is that sole proprietorships where the owner works alone or local KAUs where turnover less than half a man-year are included as of 1999. These units employ approximately 10 000 persons.

5.2. Coherence

This survey is mainly comparable to the manufacturing commodity figures, as they both cover mining, quarrying and manufacturing. The differences lies primarily in that 1) the commodity figures use enterprise as survey unit, while the structural statistics use local KAUs, and 2) that while the structural statistics count all local KAUs, the commodity figures has a cut-off at 10-20 employees (depending on industry). These differences imply that the surveys can not be compared directly, but that tendencies should coincide. Commodity figures are published 4 and 8 months before the preliminary and final structural statistics figures, respectively, and are used as pointers for the development in different industries within mining, quarrying and manufacturing together with indicators from the short term statistics for manufacturing.

6. Availability

6.1. Internet address

Structural figures for mining, quarrying and manufacturing can be found at http://www.ssb.no/english/subjects/10/07/sti_en/ and on our theme page http://www.ssb.no/industri_en/. The commodity figures can be found at http://www.ssb.no/english/subjects/10/07/vti_en/.

6.2. Language (bokmål/nynorsk, English)

All publications are published in Norwegian (bokmål or nynorsk) and in English.

6.3. Publications

Figures are also published in StatBank

<http://statbank.ssb.no/statistikkbanken/?PLanguage=1>. Some tables are published in Statistical Yearbook of Norway.

6.4. Storing and use of basic material

Micro data and information on sample units and population are stored temporarily in the programming language SAS, and permanently as text files.

6.5. Other documentation

Eurostat manual on the production of Structural Business Statistics is used in the preparation of structural figures for mining, quarrying and manufacturing.

About the statistics on our webpage gives more information about the survey, http://www.ssb.no/english/subjects/10/07/sti_en/about.html.

7. Main results

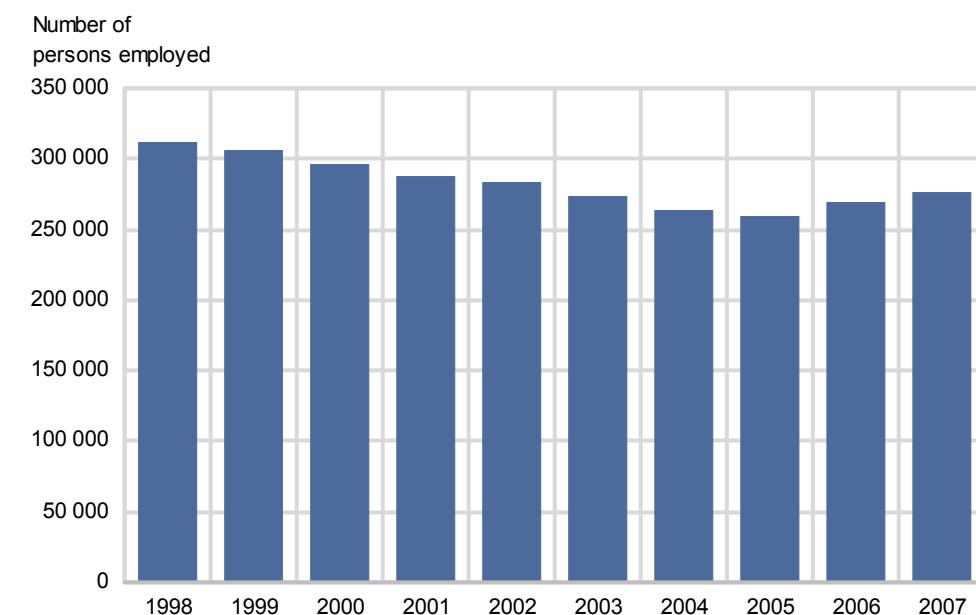

7.1. Employment

In 1998 the number of persons employed was the highest within mining, quarrying and manufacturing since 1988, with approximately 300 000 persons employed.

That was the sixth year in a row that employment figures rose. But as of 1999 the employment started falling, and reached the bottom in 2005, when ca. 260 000 persons were employed in mining, quarrying or manufacturing. Then, employment rose by 9 500 persons from 2005 to 2006. The increase kept on through 2007, and the number of persons employed reached 276 000.

Despite the increase these few last years the number of persons employed has fallen by 12 per cent (approx. 35 800 persons) since 1998.

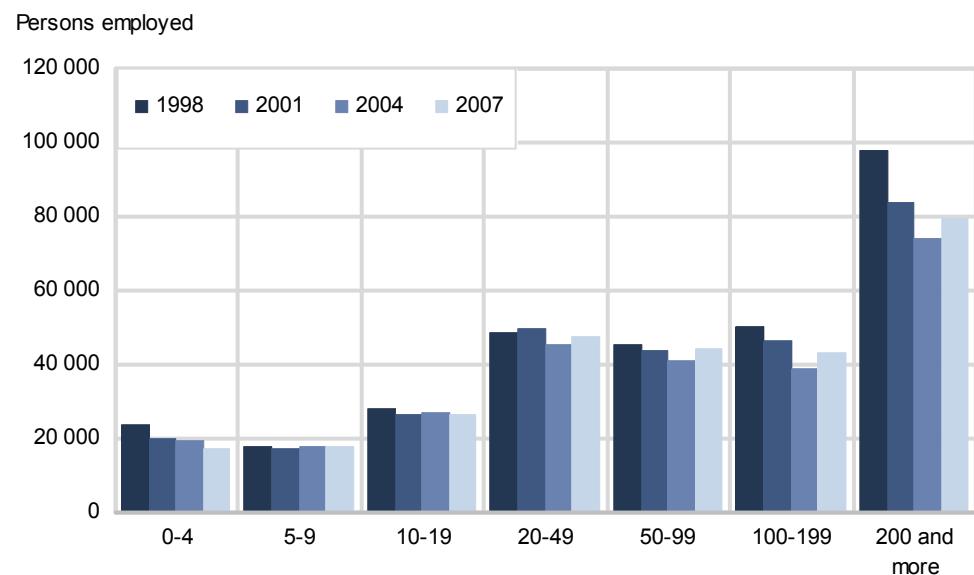

Figure 1. Employment in mining, quarrying and manufacturing. 1998-2007

There were about 19 800 local KAUs within mining, quarrying and manufacturing in 2007, and 195 of these employed 200 persons or more. Together these 195 local KAUs employed more than 79 000 persons, which equal 29 per cent of the total employment within mining, quarrying and manufacturing.

Even though the number of persons employed in local KAUs with 200 employees or more has fallen by 19 per cent since 1998, the share of employees working in this group has fallen less, namely by 3 percentage points.

Figure 2. Number of persons employed by local KAU-size. Mining, quarrying and manufacturing. 1998, 2001, 2004 and 2007

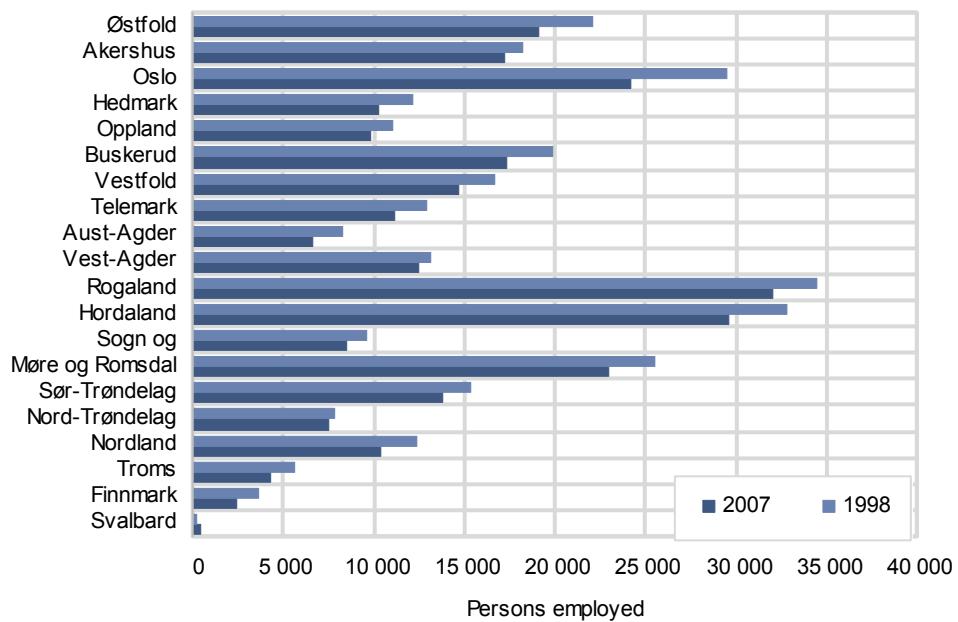

The food product industries employed more than 49 000 persons in 2007, and were thereby clearly the industries that employed the most persons. The second largest employer was the machinery and equipment industry, with 26 000 persons employed. The food product industries employed the most in 1998 as well, but were then followed by publishing and printing etc..

Pulp, paper and paper products, publishing and printing etc. and the textile industries are the ones that have experienced the largest relative changes since 1998, with falls in employment by 38, 37 and 36 per cent, respectively.

There were mainly small changes that took place from 2006 to 2007. Machinery and equipment industry and transport equipment experienced the largest relative changes, with employment figures rising by 9 and 8 per cent, respectively, and for pulp, paper and paper products, where employment fell by 8 per cent.

32 000 persons were employed in mining, quarrying or manufacturing in Rogaland in 2007, and was thereby the county with the most persons employed within these industries. Hordaland and Oslo followed. Rogaland was the county which employed the most persons within mining, quarrying and manufacturing in 1998 as well.

Figure 3. Number of persons employed by county. Mining, quarrying and manufacturing. 1998 and 2007

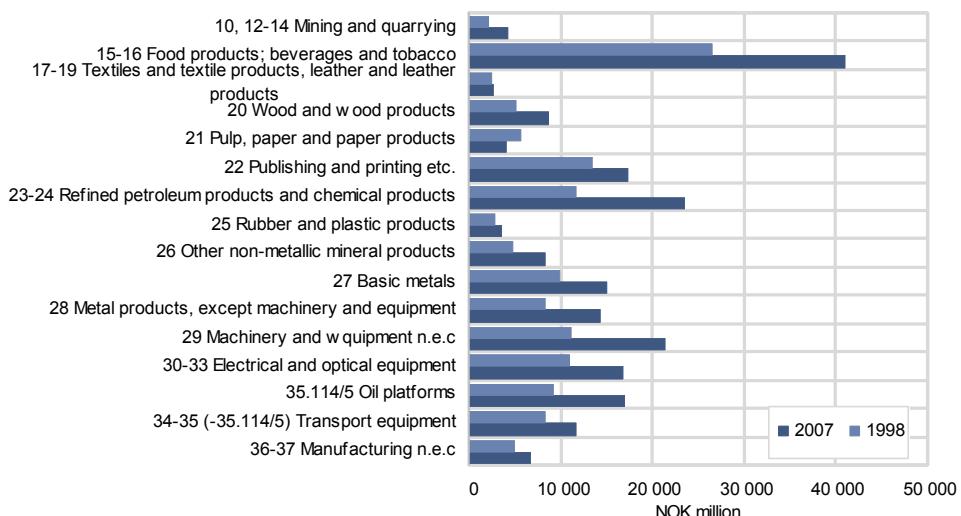

7.2. Production and value added

Total value of production in mining, quarrying and manufacturing was close to NOK 800 billion in 2007, a growth of 70 per cent since 1998. Value added, measured at market prices, increased by 3 per cent, to NOK 216 billion, from 2006 to 2007. Value added has risen by 58 per cent since 1998.

Value added per person employed increased from NOK 439 000 in 1998 to NOK 783 000 in 2007 – an upsurge of 78 per cent.

Figure 4. Value added per person employed by industry. Mining, quarrying and manufacturing. 1998 and 2007

Value added per person employed in 2007 differed much by industry, from 458 000 in the textiles industry up to 1 588 000 for refined petroleum products and chemical products. Other capital intensive industries, such as the metal industry, had a high value added per person employed as well.

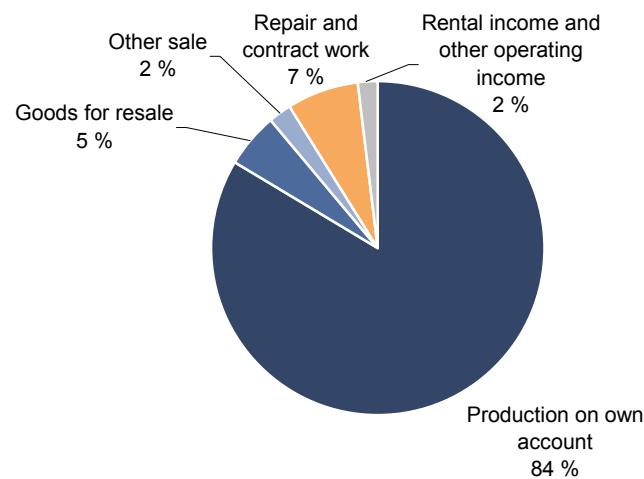

Hordaland, a county strongly influenced by the positive development in the oil refining industry, had the highest value added in 2007 – just a little under NOK 27 billion. Rogaland and Oslo followed.

7.3. Income and expenditures

Income for mining, quarrying and manufacturing was NOK 822 billion in 2007.

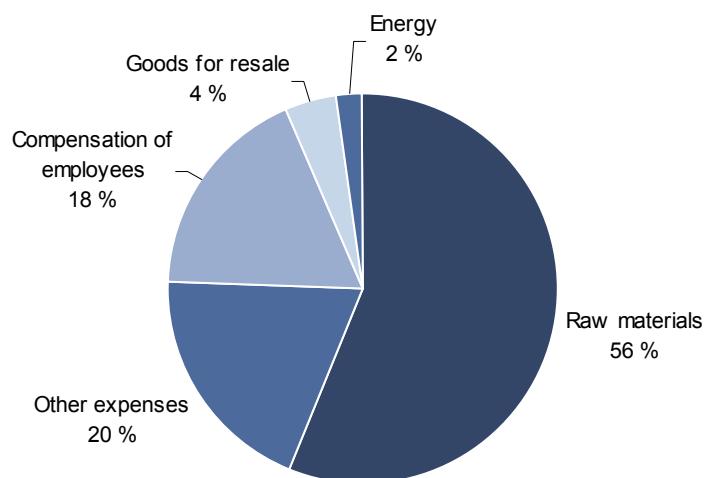

Production on own account generated most of the income for local KAUs in mining, quarrying and manufacturing (84 per cent). 5 per cent of total income came from goods for resale, and 7 per cent came from repair work and contract work.

Figure 5. Income. Mining, quarrying and manufacturing. 2007

Expenditures amounted to NOK 747 billion, where half the amount was raw materials (56 per cent). Compensation of employees was the second largest expenditure item (18 per cent). The cost of energy was approximately NOK 17 billion in 2007, equal to 2 per cent of total expenditures.

Figure 6. Expenditures. Mining, quarrying and manufacturing. 2007

Income has increased by ca. NOK 324 billion, or 65 per cent, from 1999 to 2007. We see a similar development in expenditures, which has risen with 68 per cent since 1999.

The distribution of income has been more or less constant the last years. As for expenditures, we see that compensation of employees as share of total expenditures has been reduced, while the raw materials share has risen by 5 per cent. That fall in compensation of employees may be connected with the previously mentioned reduction in number of persons employed within mining, quarrying and manufacturing. Other expenditures have been steady, seen as a share of total expenditures.

7.4. Gross investment

Gross investment for mining, quarrying and manufacturing was NOK 25.6 billion in 2007. That is equal to an increase of NOK 6 billion from 2006 (31 per cent). Gross investments have increased a little more than NOK 4 billion (20 per cent) since 1998.

1. Principal figures for all kind-of-activity units (KAUs) in mining, quarrying and manufacturing. 1972 - 2007

| | Local KAUs | Persons employed | Compensation of employees | Production value | Value added | | Gross investment |
|---------------------------|------------|------------------|---------------------------|------------------|---------------|---------------|------------------|
| | | | | | Market prices | Factor prices | |

¹ Changed treatment of small kind of activity units (local KAUs) has led to an reduction of about 1 000 KAUs and 3 000 persons employed. ² Break in the time series because of changed industrial classification. The figures from 1989 below the breaking line are in accordance with the revised Norwegian Industrial Classification (SIC 94), while the figures for 1972 - 1992 above the line conform to the previous standard. ³ From 1996 production value includes freight. ⁴ Asphalt plants have been reclassified from industry division 23 Coal and refined petroleum products to industry division 26 Non-metallic mineral from 1996. ⁵ Enterprises with individual proprietorship where the owner is working alone (one-man enterprises) and local KAUs with a turnover of less than half a man-year is included as of 1998.
