Norges offisielle statistikk	I denne serien publiseres hovedsakelig primærstatistikk, statistikk fra statistiske regnskapssystemer og resultater fra spesielle tellinger og undersøkelser. Serien har først og fremst referanse- og dokumentasjonsformål. Presentasjonen skjer vesentlig i form av tabeller, figurer og nødvendig informasjon om datamaterialet, innsamlings- og bearbeidingsmetoder, samt begreper og definisjoner. I tillegg ges det en kort oversikt over hovedresultatene.
	Serien omfatter også publikasjonene Statistisk årbok, Historisk statistikk og Regionalstatistikk, samt Standarder for norsk statistikk og Veiviser i norsk statistikk.
Official Statistics of Norway	This series consists mainly of primary statistics, statistics from statistical accounting systems and results of special censuses and surveys, for reference and documentation purposes. Presentation is basically in the form of tables, figures and necessary information about data, collection and processing methods, and concepts and definitions. In addition, a short overview of the main results is given.
	The series also includes the publications Statistical Yearbook, Historical Statistics and Regional Statistics, as well as Standards for Norwegian Statistics and Guide to Norwegian Statistics.

Preface

This publication provides national accounts statistics for the years 1990-1997. The 1996 and 1997 figures are preliminary. For the years 1990-1995 the publication contains final and more detailed figures. Input-output tables are presented for 1995. The publication contains output, intermediate consumption, value added, income components and employment by industries, and consumption, gross capital formation, fixed assets, exports and imports. National accounts statistics covering institutional sectors are published in National Accounts 1990-1997: Institutional Sector Accounts.

The figures presented here are estimates from the main revision of the Norwegian national accounts, compiled according to the guidelines of the System of National Accounts 1993 and the European System of Accounts 1995. The main revision has improved the quality of national accounts by using new methods of estimation and new statistical sources. New definitions have also been introduced. Definitions and classifications of the revised national accounts are reviewed in the text.

Some principal figures for the years 1990-1997 have been published in the Weekly Bulletin of Statistics no. 19/98 and in Economic Analyses no. 4/98. Figures back to 1978 are published in National Accounts 1978-1996: Production, Uses and Employment. Besides, principal figures from the national accounts can be found on Internet at Statistics Norway's Web-pages.

This publication is also available with text in Norwegian: Nasjonalregnskapsstatistikk 1990-1997: Produksjon, anvendelse og sysselsetting.

The publication is prepared by Division for National Accounts. Head of Division is Liv Hobbelstad Simpson.

107. Inverse matrix 1995 at basic prices. Endogenous imports	130

1. Introduction

The national accounts statistics are designed to provide a consistent and comprehensive survey of the national economy. The national accounts contain national aggregates, and give detailed descriptions of transactions between different sectors of the economy, including the rest of the world. The national accounts also provide information on different types of capital stocks. Statistics from many areas are utilized in the national accounts. Some parts of the national accounts are constructed more or less directly from other statistics, while other parts are based heavily on calculations and estimations.

Statistics Norway has recently completed a main revision of the national accounts. More than 20 years have elapsed since the last main revision, while the earlier revisions were normally undertaken every 10 years or so. Consequently, it was necessary this time to conduct a very comprehensive examination of the sources and methods of the national accounts. In addition, new definitions and classifications are introduced based on new international guidelines of the System of National Accounts 1993 (SNA 1993, published by UN, OECD, IMF, the World Bank and the Commission of the European Communities in 1993) and the European System of Accounts 1995 (ESA 1995, published by Eurostat/EC-Commission in 1996). Norway has, according to the EEA-treaty, an obligation to implement ESA 1995.

The first results from the main revision, figures for years 1988-1992, were released by summer 1995. Statistics Norway has later on published revised final estimates for 1993-1995, and provisional estimates for 1996 and 1997. In addition, quarterly estimates have been published according to the new system of national accounts. Also revised time series back to 1978 are published. In 1997, revised estimates of non-financial assets and consumption of fixed capital were added, making it possible to arrive at net concepts for income and saving.

Definitions and classifications of the national accounts are reviewed below. This review is related to the figures presented in this publication, i.e. production, uses and employment. Valuation principles and methods of calculations on volume and price changes are also briefly described below. Chapter 7 contains a description of the input-output tables.

2. Definitions

2.1. GDP and production

Gross domestic product (GDP)

- = Output – Intermediate consumption + Taxes on products, net – Correction for FISIM
- = Total value added + Taxes on products, net – Correction for FISIM
- = Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports – Imports
- = Final uses – Imports
- = Final domestic uses + Exports – Imports
- = Compensation of employees + Operating surplus + Consumption of fixed capital + Taxes on production – Subsidies on production – Correction for FISIM

BNP is the Norwegian abbreviation for GDP (Gross Domestic Product). It refers to the sum of the gross values added of all units engaged in production, and consequently all income generated from production. GDP may be defined and compiled from three different main approaches (cf. the three definition blocks above), i.e. the production or output approach, the expenditure approach and the income approach. In the first block, the item "Correction for FISIM" might have been alternatively included with intermediate consumption and in the third block with operating surplus.

Output

Value of the goods and services that are produced from resident production. This cover market production, production for own final use, and non-market production in general government and in non-profit institutions serving households.

The term has been amended from gross output as gross/net is not distinguished for this item.

Production of goods and services (products) should not be mistaken for sale or turnover of products. Correction items such as taxes on products and subsidies on products are not included with output, but are considered as additional items to total value added of the industries in order to arrive at GDP (at market prices).

Intermediate consumption

Value of the goods and services consumed (transformed or used up) as inputs by the production process, excluding fixed assets whose consumption is recorded as consumption of fixed capital.

More precise definitions are available, in particular for drawing up the borderlines against gross fixed capital formation and against compensation of employees.

Intermediate consumption relates to products consumed and not to products that are purchased.

Taxes on products

Compulsory, unrequited payments from units of production to general government as taxes payable per unit of goods and services when they are produced, delivered, sold, transferred or otherwise disposed of by their producers.

The contents of taxes on products are not much amended as a result of the revision.

Subsidies on products

Current unrequited payments that government units make to units of production as subsidies payable per unit of goods and services which they produce, sell or import.

Taxes on products, net

= Taxes on products – Subsidies on products

FISIM

Value of financial intermediation services indirectly measured, i.e. for services which are not charged directly, defined as total property income receivable by financial intermediaries minus their total interest payable, excluding the value of property income receivable from the investment of own funds.

This part of output of financial intermediation (by banks and other financial institutions) is not allocated to various uses, but is unallocated and recorded as intermediate consumption (correction item to GDP), a convention which might be changed if international agreement is reached.

Value added

The additional value created or income generated by the process of production, recorded for an industry or the total of all resident industries, and defined as the value of output less the value of intermediate consumption.

Market production and production for own final use

Production carried out by producers whose output is all or mostly all marketed, respectively retained for their own final use.

The definitions of market and non-market production are based on certain criteria. Production for own final use by industry includes agriculture and hunting, fishing, general construction of buildings, building installation and completion, dwelling services (owner-occupiers etc.), and private households with employed persons. In addition, products involved in market production might also be designated as products for

own final use (e.g. agricultural products, firewood, fish etc.).

Total supply

= Output + Taxes on products, net + Imports
= Output at basic prices + Taxes on products
– Subsidies on products + Imports

Taxes on products (and subsidies on products) include taxes (and subsidies) on products that are related to both domestic production and imports (including customs duties). Imports of individual goods are valued at cif. In the institutional sector accounts, output is recorded at producers' prices (i.e. including taxes on products, net).

2.2. Final use categories

Final uses

= Final consumption expenditure + Gross fixed capital formation + Changes in inventories + Exports

Final consumption expenditure

= Household final consumption expenditure + Final consumption expenditure of NPISHs
+ Central government final consumption expenditure + Local government final consumption expenditure
= Actual final consumption of households + Actual final consumption of general government

The first relationship defines total final consumption expenditure of the sectors. The second relationship sums up total consumption of goods and services acquired by the sectors, i.e. by the value of all the individual consumption of goods and services acquired by resident households irrespective of which sector is financing them, and by the value of the collective consumption services provided by general government to the community or large sections of the community.

Government final consumption expenditure

= Central government final consumption expenditure + Local government final consumption expenditure
= Individual consumption of general government + Collective (actual final) consumption of general government

Collective consumption of general government

Government final consumption expenditure (such as general public services, defence affairs, public order and safety affairs, industry-related economic affairs and services) that do not provide a mechanism for redistributing resources among individual households.

Collective consumption is the part of government consumption expenditure that is actually acquired by the general government, while the remaining govern-

ment consumption expenditure (such as education, health, social security and welfare) are expenditures incurred by general government as well, but actually acquired by households.

Consumption of goods

Household consumption expenditure that relates to households' consumption of goods.

Household consumption expenditure of goods should not be mixed up with actual consumption of goods acquired by households (not specified in tables). The difference is equal to individual consumption of goods in consumption expenditure of general government and NPISHs (minor importance since most individual consumption expenditure of these sectors relates to services).

Consumption of services

Household consumption expenditure that relates to households' consumption of services.

Household consumption expenditure of services should not be mixed up with household actual consumption of services, which has a far wider content (see above).

Household final consumption expenditure

Expenditure incurred by resident households on consumption goods and services.

Household durables and semi-durables - except expenditure on dwellings and valuables - are recorded as household consumption expenditure in the period they are acquired (purchased). Expenditure on dwellings by households constitutes gross fixed capital formation, while dwelling services (rentals) are recorded annually over the period of service lives of the dwellings as part of the household consumption expenditure.

Final consumption expenditure of NPISHs

Expenditure incurred by non-profit institutions serving households on consumption goods and services. These expenditures add up from intermediate consumption (goods and services which NPISHs need for their production of education, health, cultural and other services), compensation of employees, consumption of fixed capital, any taxes on production, while deducting receipts from sales.

Final consumption expenditure of NPISHs is treated as actual final consumption of households, i.e. total value of final consumption expenditure of NPISHs is allocated as acquired by households.

Local government final consumption expenditure

Expenditure incurred by local government on consumption goods and services. These expenditures

add up - as before - from intermediate consumption (goods and services which local government needs for its production), compensation of employees in local government, consumption of fixed capital in local government, any corresponding taxes on production, net, while deducting receipts from sales from local government to other sectors. In addition, local government final consumption expenditure includes consumption goods and services that local government has purchased (i.e. expenditure incurred) from market producers and supplied directly to households.

Local government final consumption expenditure consists of two main parts, i.e. collective (actual) final consumption of local government and individual consumption expenditure of local government which is also part of actual final consumption of households.

Central government final consumption expenditure

Expenditure incurred by central government on consumption goods and services. These expenditures add up - as before - from intermediate consumption (goods and services which central government needs for its production), compensation of employees in central government, consumption of fixed capital in central government, any corresponding taxes on production, net, while deducting receipts from sales from central government to other sectors. In addition, central government final consumption expenditure includes consumption goods and services that central government has purchased (i.e. expenditure incurred) from market producers and supplied directly to households.

Central government final consumption expenditure consists of two main parts, i.e. collective (actual) final consumption of central government and individual consumption expenditure of central government which is also part of actual final consumption of households.

Actual final consumption of households

(= Actual individual consumption)

= Household final consumption expenditure + Final consumption expenditure of NPISHs + Individual consumption expenditure of central government + Individual consumption expenditure of local government

Individual consumption expenditure is exclusively - related to households (i.e. only sector to acquire individualized consumption goods and services).

Gross capital formation

= Gross fixed capital formation + Changes in inventories + Net acquisitions of valuables

Net acquisitions of valuables entail an extended content of gross capital formation, but so far with poor

empirical coverage for this new item. Gross capital formation as a term diverges from the similar term gross real investment (see below) which is used to distinguish investment in non-financial assets from investment in financial assets (cf. net lending/net borrowing).

Gross real investments

Gross capital formation (including addition for the value of non-produced non-financial assets).

Gross fixed capital formation

Value of acquisitions less disposals of new or existing fixed assets. Fixed assets consist of both tangible fixed assets (dwellings, other buildings and structures, machinery and equipment, cultivated assets) and intangible fixed assets (mineral exploration, computer software and other intangible fixed assets).

Apart from extended coverage for intangible fixed assets and new valuation principle for large items (see below), the definition is more or less as before the revision. The borderline against intermediate consumption is drawn by value magnitude and not by duration as before.

Changes in inventories

Value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories. Goods (and services that may take a long time to produce, such as software development) are relevant for changes in inventories, also including work-in-progress, as well as work-in-progress on cultivated assets (single-use plants or livestock - also including young fish - for later slaughtering).

Net acquisitions are partly actual purchases and sales of goods, but also reflect internal transactions of the producers. In practice, changes in inventories of goods in general are determined as total supply less total other uses of each good and subsequently summed over all goods.

Exports of goods and services

Value of goods and services from residents to non-residents.

Imports of goods and services

Value of goods and services from non-residents to residents.

Export surplus

= Exports – Imports

Total uses

= Intermediate consumption + Final consumption expenditure + Gross fixed capital formation

$$\begin{aligned}
 &+ \text{Changes in inventories} + \text{Exports} \\
 = &\text{Final uses} + \text{Intermediate consumption} \\
 = &\text{Domestic uses} + \text{Exports} \\
 = &\text{Final domestic uses} + \text{Exports} + \text{Intermediate consumption}
 \end{aligned}$$

2.3. Income components

Compensation of employees

= Wages and salaries + Employers' social contributions

Wages and salaries

Remuneration to employees as entitled to receive from employers in respect of work done during the relevant period (before adding employers' social contributions).

Wages and salaries are both in cash and in kind. Wages and salaries in cash include pay for overtime, and sickness and maternity allowances paid by employers. Wages and salaries in kind consist of goods and services, or other benefits, provided free or at reduced prices by employers, that can be used by employees at their own discretion. Wages and salaries subsequently are distributed to households and to rest-of-the-world (i.e. for non-residents employed with resident producers, cf. foreigners on Norwegian ships and employees not fulfilling the one-year criterion to their centre of economic interest).

Employers' social contributions

Value of social contributions incurred by employers in order to obtain social benefits for their employees, paid to central government and to autonomous social security and pension funds as well as non-autonomous pension funds. They include the following sub-items: employers' contributions to National Insurance, employers' other actual social contributions (contributions to the Public Service Pension Fund, Municipal Pension Funds, other social security schemes, employers' contributions to employees with low wages and salaries, and other social contributions), and in addition, employers' imputed social contributions (which coincide with social benefits actually paid - i.e. through unfunded arrangements - from employers to present or former employees).

Other taxes on production

Taxes - except taxes on products - that resident producers incur, and that are payable to general government, as a result of engaging in production.

The contents of other taxes on production are not much amended as a result of definitional changes due to the revision.

Other subsidies on production

Subsidies - except subsidies on products - that resident producers may receive from general government, as a consequence of engaging in production.

The contents of other subsidies on production are reduced considerably as a result of definitional changes due to the revision.

Taxes on production

= Taxes on products + Other taxes on production

Subsidies on production

= Subsidies on products + Other subsidies on production

Operating surplus

= Gross domestic product - Compensation of employees - Taxes on production + Subsidies on production - Consumption of fixed capital

Operating surplus may also be estimated directly by using the income approach (see GDP above). Earlier, there was no distinction between operating surplus and mixed income in the household sector.

Operating surplus by activity

= Value added - Compensation of employees - Other taxes on production + Other subsidies on production - Consumption of fixed capital

2.4. Fixed assets and consumption of fixed capital

Fixed assets

Consist of both tangible fixed assets (dwellings, other buildings and structures, machinery and equipment, cultivated assets etc.) and intangible fixed assets (mineral exploration, computer software and other intangible fixed assets).

Inventories and valuables that are not used repeatedly in production, are not counted as fixed assets. Neither do natural assets that are not produced.

Consumption of fixed capital

Decline in the current value of the stock of fixed assets as a result of physical deterioration, normal obsolescence or normal accidental damage.

2.5. Employment

Employed persons

Average number of persons employed with resident producers. Persons employed part-time and persons temporary on leave are included.

Foreign employees engaged in domestic production, of which foreign seamen on Norwegian owned ships or ships rented from abroad are included. Numbers employed are distributed by activities, gender and employees vs. self-employed.

Full-time equivalent persons

Defined as number of persons full-time employed, plus number of persons part-time employed recalculated to full-time equivalent basis.

Numbers of full-time equivalent employees are arrived at by recalculating to full-time equivalent basis by using share of full posts or of wages as weights. Numbers of full-time equivalent self-employed are arrived at on the basis of working time of self-employed males.

Total hours worked

Hours worked in domestic production within effective and normal working hours with addition for overtime while deducting absences due to sickness, leave of absence, vacations and any labour conflicts.

Hours worked are also influenced by the calendar effect (movable holidays and leap years). For self-employed, hours worked are determined as actual working hours adjusted for absence.

3. Classifications of the national accounts

3.1. Accounting system of the national accounts

The accounting system of the national accounts contains a listing of the specifications of accounts used. The new accounting system for the revised Norwegian national accounts, is based on the international standards for national accounts SNA 1993 and ESA 1995. The accounting system gives the framework and contents for the production of national accounts statistics. In addition to accounting structure, the accounting system contains a number of groupings or classifications used in the national accounts. The most important of these are described below.

3.2. Institutional sector classification

The institutional sector classification lists the main sectors of the economy, i.e. non-financial corporations, financial corporations, general government, households and rest-of-the world, with the corresponding sub-sectors. This classification is particularly important for the production and publication of national accounts statistics and balance of payments statistics, while also playing a central role for credit market statistics and financial balance sheets. For more information about the institutional sector classification, see National Accounts 1990-1997: Institutional Sector Accounts (NOS C 485).

3.3. Activity classification of the national accounts

The activity classification used in the national accounts refers to aggregates that are based on the new Norwegian Standard Industrial Classification (SN94),

which is an elaboration of the EU-standard NACE Rev.1. The detailed activity classification of the revised national accounts contains 148 industries (see appendix A), while the quarterly national accounts have much fewer industries specified. Several levels of aggregation have been introduced for publication and reporting purposes. The activity classifications used in this publication are presented in appendix B-D. Most industries (142) have market production, while production for own final use is limited to 6 industries. Non-market production is relevant for 14 industries in central government, 9 (or actually 7) industries in local government and 7 industries in non-profit institutions serving households. Thus, each of these categories of production (producers) may be broken down by their respective industries. Market producers have receipts from sale that normally exceed their costs of production, which is not the case for the NPIs serving households (partly also financed by general government).

3.4. Transactions in goods and services

This is a listing of variables for which transactions of the national accounts are grouped in terms of products. The main categories are output, intermediate consumption, final consumption expenditure (and actual final consumption), gross capital formation, exports and imports. Output is distributed on market and non-market output, plus output for own final use. Non-market output has sub-categories for central government, local government and the NPISHs. The former two sub-categories define the production of general government, when also some market output in local government (water supply, sewage and refuse disposal) are added. Important consumption categories are individual consumption expenditure, collective consumption expenditure and actual final consumption - concepts which are defined above. Gross capital formation consists of former categories of gross fixed capital formation and changes in inventories, plus a new category of acquisitions less disposals of valuables. A main breakdown of exports and imports follows the distinction between goods and services.

3.5. Distributive transactions

This is a listing of variables for which transactions of national accounts is relevant for the various income accounts. The main categories are wages and salaries, employers' social contributions, taxes on production, subsidies, property income, current taxes on income, wealth etc., social benefits, other current transfers and capital transfers. Components of compensation of employees (see definitions above) and taxes on production and subsidies (with components for taxes on products and other taxes on production, respectively subsidies on products and other subsidies on production) are relevant for this publication, while the other categories of distributive transactions will be mostly exposed in the publication on institutional sector accounts.

3.6. Classification of balancing items in the national accounts

This is a listing of main aggregates which are arrived at as balancing items in the national accounts and balance of payments, such as GDP, GNI, disposable income, saving, net lending/net borrowing, export surplus and external balance of current account. These are main aggregates that are among the most important concepts used in the production and presentation of national accounts and balance of payments statistics.

3.7. Classification of non-financial assets

This is a classification by type for aggregates of non-financial assets, such as tangible and intangible fixed assets, inventories, valuables, and non-produced assets, both including tangible assets such as land, subsoil assets, water resources etc. and intangible assets such as patented entities, transferable contracts etc. It classifies the various types of non-financial assets according to the structure of these main items. This classification is more aggregated than the corresponding classification used for gross capital formation by type.

3.8. Product classification of the national accounts

Product classification of the national accounts relates to aggregates of goods and services that are specified in the national accounts (see transactions in goods and services above which define those variables for which the product classification applies). The classification is based on EU's central product classification CPA - Statistical Classification of Products by Activity in the European Community (Eurostat, 21.10.1992). CPA is a grouping of products by activities, i.e. it defines characteristic products within each activity and which are thus connected to the activity classification NACE Rev.1. Excluding the products introduced for mere technical accounting reasons, the new product classification of the national accounts contains 680 aggregated goods (of which 565 are manufacturing goods) and 300 aggregated services. In the quarterly national accounts the number of products are much less.

3.9. Classification of individual consumption by purpose

This is the classification of consumption used in the national accounts for household final consumption expenditure and household actual final consumption. For publication, this classification and the more aggregated versions appear in the same hierarchical system, with groupings of 10, 35 and 112 items of consumption purposes. This new classification of individual consumption by purpose is based on the one presented in SNA 1993 and ESA 1995 (COICOP - Classification Of Individual Consumption by Purpose). COICOP are however slightly revised in 1997.

3.10. Classification of the functions of the government

This is a classification by purpose which is applied to all types of expenses of general government, such as government final consumption expenditure, gross fixed capital formation, subsidies, property income (i.e. expenses), capital transfers and other transfers, for use in financial accounts of government and in the national accounts. This classification is based on the version of COFOG (Classification Of Functions Of the Government) which was presented in SNA 1993 and ESA 1995, but has appeared in a somewhat revised version in 1997. In the national accounts, 55 COFOG-groups are specified, of which 51 groups distribute central government final consumption expenditure and 25 groups distribute local government final consumption expenditure.

3.11. Classification of the purposes of the non-profit institutions serving households

This is a minor purpose classification which applies to the expenses of the NPISHs. It is based on the international classification referred to in SNA 1993 as COPNI (Classification Of the Purposes of the Non-profit Institutions serving households). The revised national accounts specify 5 such groups of purposes.

3.12. Classification of outlays of producers by purpose

This is a purpose classification not yet developed in the Norwegian statistical system. It will have an international basis in COPPP (Classification of Outlays of Producers by Purposes) - also presented in SNA 1993 - and is an alternative classification of the outlays of producers by purpose, such as sales promotion, research and development, pollution abatement and control, employee training etc.

4. Valuation

Valuation is particularly relevant for transactions in goods and services, but also to the general aspect of time of recording (cf. cash values or accruals values, and other principles in recording of statistical data). The transactions of variables to appear in this publication (the national accounts of the real economy) apply in general the accruals basis principle of recording. Thus, taxes on production and subsidies are basically recorded in accruals values and not as recorded in the government accounts (taxes on production and subsidies in cash values).

Transactions in goods and services have different price references for their recording. Output is valued at basic prices in the cases of market production and production for own final use (i.e. basic prices for similar products in market production), while non-market output (per convention) is recorded by total costs of

production in lack of prices. The use categories - both intermediate consumption and final uses - are valued at purchasers' prices, including exports at fob. Imports are valued at cif. Basic prices mean that corresponding taxes on products are deducted and subsidies on products added to output recorded at producers' prices (excluding value added tax). Previously, the estimates of output were published at producers' prices (excluding VAT). However, the principle of output at basic prices has been introduced in SNA 1993 og ESA 1995 for the purpose of achieving a standard common valuation internationally and at national level.

Output at basic prices has implications such as:

- value added of an industry is "valued" at basic prices (calculated as output at basic prices less intermediate consumption at purchasers' prices)
- taxes on products (including value added tax and investment levy) and subsidies on products are not distributed by industry
- total value added of the industries also is "valued" at basic prices
- GDP is "valued" at market prices, which means that taxes on products less subsidies on products are added to total value added of the industries at basic prices
- accruals VAT (i.e. VAT on output less non-deductible VAT on intermediate consumption and other uses) is among the taxes on products to be added to arrive at GDP
- taxes and subsidies on production that are not recorded as taxes and subsidies on products (i.e. other taxes on production, other subsidies on production) are distributed by industry and thus influence the magnitudes of operating surplus of the industries (but not value added of the industries).

5. Calculations on volume and price changes

Constant-price estimates in the national accounts are calculated at prices of the previous year, in other words, the base year is changed every year. Subsequently, data on changes of volume are constructed in terms of growth rates and corresponding implicit data on changes of prices. In parallel, time series of volume figures are constructed by using prices from a reference year. The reference year 1990 in this publication is chosen in response to international recommendation advocating the use of years ending at 0 or 5 as base year or reference year. 1990 was also used as reference year in the publication National Accounts 1978-1996: Production, Uses and Employment. The constant-price estimates are consistent with the data on changes in volume in the series of growth rates. Since the chaining is carried out separately for all items, the table components do,

however, not necessarily add to the totals of the same table.

The calculation of constant-price estimates is carried out within the framework of integrated supply and use tables at current prices, by deflating (current values that are divided by price indices) at the detailed product level. The deflation approach has in fact two dimensions, (i) differentiated by main categories of supply and use (deflating output, imports, exports and implicitly for domestic use), and (ii) differentiated through valuation (deflating current values at basic prices by price indices and implicitly determining the other value components, including adjustments against values at purchasers' prices). Constant-price estimates for aggregates of supply, uses and value added follow through adding up and balancing constant-price estimates of products. They include aggregates such as output by industry, categories of exports and imports, categories of final uses, intermediate consumption by industry, value added by industry and GDP.

This entails that the principle of double deflation is used, i.e. separate deflation of output and intermediate consumption in order to arrive at value added at constant prices as a balancing item, through a detailed input-output framework (supply and use tables). The condition of great details is linked to the condition that the individual products are as price homogeneous as possible, with a possibility for adapting to available basic statistics for values as well as prices.

6. Revisions and publication of the national accounts

6.1. The current publication cycle

The national accounts for a specific time period are published in several versions. Quarterly national accounts are published about 2 months after the end of the quarter. For each new quarter presented, the figures for the previous quarters within the same year are revised. The quarterly accounts are more aggregated compared to later annual accounts and comprise transactions in goods and services by industries and final use, in addition to employment data.

In Norway, three provisional versions of the annual accounts are compiled before the final version is published. The first version is published about 1 month after the end of the year and are based on accumulated quarterly accounts. These results are revised 3 months later, and for the first time aggregated institutional sector accounts are included.

The next two versions are more disaggregated and are published about 16 and 28 months after the end of the

accounting year respectively. The quarterly figures are harmonized with the final annual figures subsequently.

The national accounts are published in the Weekly Bulletin of Statistics, Economic Analyses and in Official Statistics of Norway publications. National accounts data are also reported to international organisations, e.g. OECD, EUROSTAT, IMF and United Nations.

6.2. Main revisions

Main revisions are the occasions when special attention is given to the actual levels of the national accounts items, whilst best possible year-to-year movements have a first priority in the current national accounting work. In addition, main revisions normally will introduce new methods of estimation, based on new basic statistics, as well as new definitions and classifications, based on revised international guidelines.

The results from the most recent main revision of the Norwegian national accounts were published in 1995. Norway was the first European country to adapt to the new international guidelines. The 1995 revision, no doubt, improved the quality of the Norwegian national accounts, in particular from a better utilization of the many important statistical sources behind the national accounts estimation. In addition, the revision included considerable enlargements, such as integrating new elements of the institutional sector accounts with real economy national accounts data.

The main revision also had direct impact on the compilation of balance of payments statistics, presented in Norway as an integral part of the national accounts. Balance of payments statistics follow the IMF guidelines (Balance of Payments Manual, fifth edition, 1993), which are now harmonized with SNA 1993.

The 1995 revision has quite considerably amended earlier estimates. One important reason for this is that more than 20 years have elapsed since last main revision of the national accounts was undertaken in Norway. Earlier, main revisions were normally undertaken every 10 years or so. In recent years, the direct use of main aggregates such as GDP and GNI has become more important, in particular as a reference item, and often as a financing assessment base in international economic policy. Need for best possible estimated levels, means that main revisions in future should be carried out more frequently than before.

7. Input-output

7.1. Input-output tables

Input-output tables give a detailed survey of the supply and use of goods and services of the whole economy. In Norway input-output tables are integrated in the national accounts, as recommended by SNA 1993.

Comparable input-output data are now available for the years 1978-1995.

The input-output tables computed in the national accounts are rectangular SNA input-output tables, also called supply and use tables. The supply table is of the format industry \times product, and in addition showing imports by product. The use table is showing how products are used as intermediate consumption and as final use (capital formation, exports and consumption).

Figure 1. Supply and use tables

Supply		Use				
	Product 1 ...n	Industry 1 ...m	Final use			
			Capital form.	Exports	Consumption	Changes in invent.
Industry 1		Product 1				
2		2				
m		n				
Imports						

The input-output tables presented in this publication (table 106) are of the traditional symmetric type like those we usually find in text books on the subject. They are deduced from the rectangular tables by applying assumptions about the structure of production and market behaviour. Symmetric input-output tables are simple in use and are more illustrative than the rectangular ones, in the way they describe how the industries depend upon each other. At the same time they are suitable for computing multiplier effects and import corrected figures (see below).

The conversion from the rectangular to the symmetric input-output table is done by starting with the balances of products (supply and use of each product). Domestic use of goods and services (intermediate consumption, consumption, capital formation, changes in inventories) and exports are linked directly to domestic suppliers (industries) and imports. It is assumed that all exports are supplied by domestic industries. The distribution of exports by supplying industries, is proportional with the output of the industries. Imports and the remaining part of domestic production is then subsequently distributed proportional to every domestic use category. This means that the same import share applies to all domestic use categories, and that all industries that supply a product, have the same market share in all types of use.

In the national accounts imports are distributed by product and not by industry. In the input-output tables, imports are distributed by industry by making the assumption that the products are produced and supplied from industries abroad, by the same classification that is used for domestic produced products.

Figure 2 shows the structure of a symmetric industry \times industry input-output table. The rows of a symmetric input-output table illustrate how the output of the industry is used partly as intermediate consumption in other industries and partly as final use (capital formation, exports, consumption). The rows then express market structures. The columns of a symmetric input-utput table show input of raw materials, semi manufacture products and services that the establishments of an industry have received from establishments of other industries. The columns then express the production or cost structure of each industry.

Figure 2. Symmetric input-output table

	Use						Sum
	Recipient	Final use					
Supplier		Industry 1m	Capital form.	Ex-ports	Con-sump-tion	Changes in invent.	
Industry: 1							
2							
m							
Imports 1							
2							
m							

7.2. Inverse matrices

An input-output table is an organized disposition of detailed information about the economy. An input-output model is a set of structural relations, equilibrium conditions and identities that is used for analytical purposes.

The input-output model is based on standard assumptions that deliveries from other industries to intermediate consumption of the industry we look at, are proportional to total output of the industry. Further we assume that these input-output coefficients are constant, independent of the changes of output we are analyzing. We also assume that the changes of final use are exogenous. A change in final use of an industry will

then lead to an increase of the output of those industries that are supplying intermediate consumption to this industry. An output increase like this will further create demand increases of goods and services from other industries, and so forth. This is what we call a multiplier effect. Altogether the total increase of the demand for goods and services can be calculated from the inverse matrix.

The inverse matrix is calculated by solving the following input-output model:

$$x = H \bullet x + E \Rightarrow x = (I - H)^{-1} \bullet E.$$

Here x is a vector of output by industries, H is a matrix of input-output coefficients for intermediate consumption, I is the identity matrix (a matrix that has 1 along the diagonal and 0 elsewhere) and E is a matrix of final use deliveries. The inverse matrix then becomes $(I - H)^{-1}$.

One has to be attentive that the multiplier effects described here are limited by the assumption that all increases in final use are exogenous. In a more complete model for the whole economy, this increase in output of the industry would result in an increase in income, which would again result in an increase of consumption, capital formation etc. These increases would also give multiplier effects, thus the total effects may be larger than what is calculated here (table 107).

8. Further information

In addition to the tables published in NOS National Accounts, it is possible to order more detailed tables by applying directly to Statistics Norway. Tables can be transmitted by paper (post or telefax), electronic by diskettes or by e-mail (Ascii or Excel).

National accounts figures can be found on Internet at Statistics Norway's Web-pages. The Web-address is:
http://www.ssb.no/www-open/english/statistics_by_subject/09national/

If you want to order tables or need more information, please contact:

Randi Hallén, tel. 22 86 48 82, e-mail:

randi.hallen@ssb.no

or

Activity classification of the national accounts

Activity in national accounts		Standard Industrial Classification (NACE Rev. 1)
**** AGRICULTURE, FORESTRY AND FISHING		
010 Agriculture		01.1+01.2+01.3
014 Agricultural and animal husbandry service activities, except veterinary activities		01.4
015 Hunting, trapping and game propagation including related service activities		01.5
020 Forestry, logging and related service activities		02
051 Fishing		05.01
052 Operation of fish hatcheries and fish farms		05.02
**** OIL AND GAS EXTRACTION, MINING AND QUARRYING		
100 Mining of coal and lignite; extraction of peat		10
111 Extraction of crude petroleum and natural gas		11.1
112 Service activities incidental to oil and gas extraction excluding surveying		11.2
130 Mining of metal ores		13
140 Other mining and quarrying		14
**** MANUFACTURING		
151 Production, processing and preserving of meat and meat products		15.1
152 Processing and preserving of fish and fish products		15.2
153 Processing and preserving of fruit and vegetables		15.3
154 Manufacture of vegetable and animal oils and fats		15.4
155 Manufacture of dairy products		15.5
156 Manufacture of grain mill products, starches and starch products		15.6
157 Manufacture of prepared animal feeds		15.7
158 Manufacture of other food products		15.8
159 Manufacture of beverages		15.9
160 Manufacture of tobacco products		16
170 Manufacture of textiles		17
180 Manufacture of wearing apparel; dressing and dyeing of fur		18
190 Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear		19
201 Sawmilling and planing of wood, impregnation of wood		20.1
202 Manufacture of veneer sheets; manufacture of plywood, laminboard, particle board, fibre board and other panels and boards		20.2
203 Manufacture of builders' carpentry and joinery		20.3
204 Manufacture of wooden containers and other products of wood		20.4+20.5
211 Manufacture of pulp		21.11
212 Manufacture of paper and paperboard		21.12
213 Manufacture of articles of paper and paperboard		21.2
221 Publishing		22.1
222 Printing and service activities related to printing		22.2
223 Reproduction of recorded media		22.3
231 Manufacture of coke oven products		23.1
232 Manufacture of refined petroleum products		23.2
241 Manufacture of basic chemicals, excl. fertilizers and nitrogen compounds, plastics in primary forms and synthetic rubber		24.11+24.12+24.13+24.14
242 Manufacture of fertilizers and nitrogen compounds, pesticides and other agro-chemical products		24.15+24.2

Activity in national accounts (cont.)**Standard Industrial Classification
(NACE Rev. 1)**

243	Manufacture of paints, varnishes and similar coatings, printing ink and mastics	24.3
244	Manufacture of pharmaceuticals, medicinal chemicals and botanical products	24.4
245	Manufacture of soap and detergents, cleaning and polishing preparations, perfumes and toilet preparations	24.5
246	Manufacture of other chemical products	24.6
247	Manufacture of plastics and synthetic rubber in primary forms and man-made fibres	24.16+24.17+24.7
250	Manufacture of rubber and plastic products	25
261	Manufacture of glass and glass products	26.1
262	Manufacture of ceramic products, bricks, tiles etc.	26.2+26.3+26.4
265	Manufacture of cement, lime and plaster	26.5
266	Manufacture of articles of concrete, cement and plaster, non-metallic mineral products	26.6+26.7+26.8
271	Manufacture of iron, steel and ferro-alloys	27.1+27.2+27.3
273	Aluminium production	27.42
274	Manufacture of other non-ferrous metals	27.41+27.43+27.44+27.45
275	Casting of metals	27.5
281	Manufacture of structural metal products, tanks, reservoirs, steam generators	28.1+28.2+28.3
286	Manufacture of cutlery, tools and general hardware	28.6
287	Manufacture of other fabricated metal products etc.	28.4+28.5+28.7
291	Manufacture of machinery of mechanical power and other general purpose machinery	29.1+29.2
293	Manufacture of machine-tools and special purpose machinery	29.3+29.4+29.5
296	Manufacture of weapons and ammunition	29.6
297	Manufacture of domestic appliances n.e.c.	29.7
300	Manufacture of office machinery and computers	30
311	Manufacture of electric motors, generators, transformers, and electricity distribution and control apparatus	31.1+31.2
313	Manufacture of insulated wire and cable	31.3
314	Manufacture of lighting equipment, electric lamps and other electric equipment	31.4+31.5+31.6
321	Manufacture of television and radio transmitters, communication equipment, electronic components etc.	32.1+32.2
323	Manufacture of television and radio receivers, sound or video recording or reproducing apparatus etc.	32.3
331	Manufacture of medical and precision instruments	33.1+33.2+33.3
334	Manufacture of optical instruments, watches and clocks	33.4+33.5
340	Manufacture of motor vehicles, trailers and semi-trailers	34
351	Building and repairing of ships, boats and pleasure and sporting boats	35.111+35.112 +35.113+35.116 +35.117+35.12
352	Building and repairing of oil-platforms and modules. Installation and completion work on platforms and modules	35.114+35.115
353	Manufacture of railway and tramway locomotives and rolling stock	35.2
354	Manufacture of aircraft and spacecraft	35.3
355	Manufacture of other transport equipment, incl. motorcycles and bicycles	35.4+35.5
361	Manufacture of furniture	36.1
362	Manufacture of jewellery and related articles	36.2
363	Manufacture of musical instruments, sports goods, games and toys etc.	36.3+36.4+36.5+36.6
371	Recycling of metal waste and scrap	37.1
372	Recycling of non-metal waste and scrap	37.2

Activity in national accounts (cont.)**Standard Industrial Classification
(NACE Rev. 1)**

**** ELECTRICITY, GAS AND WATER SUPPLY		
401	Production of electricity	40.101
402	Distribution of electricity, renting	Part of 40.102
403	Distribution of electricity, sales	Part of 40.102
404	Manufacture and distribution of gaseous fuels through mains	40.2
405	Steam and hot water supply	40.3
410	Collection, purification and distribution of water	41
**** CONSTRUCTION		
451	Site preparation	45.1
452	General construction of buildings etc.	45.211+45.22
453	Construction of civil engineering works	45.212+45.23+45.24+45.25
454	Building installation and completion	45.3+45.4
455	Renting of construction or demolition equipment with operator	45.5
**** DOMESTIC TRADE, REPAIR OF GOODS		
501	Sale of motor vehicles, incl. parts and accessories	50.1+50.3+50.401+50.402
502	Maintance and repair of motor vehicles and motorcycles	50.2+50.403
505	Retail sale of automotive fuel	50.5
510	Wholesale trade and commission trade	51
521	Retail trade	52.1+52.2+52.3 +52.4+52.5+52.6
527	Repair of personal and household goods	52.7
551	Hotels and other accommodation	55.1+55.2
553	Restaurants, canteens and catering	55.3+55.4+55.5
**** TRANSPORT AND COMMUNICATION		
601	Transport via railways	60.1
602	Sceduled motor bus transport	60.211
603	Taxi operation	60.22
604	Other land transport	60.23+60.24
605	Tramway and suburban transport	60.212
608	Transport via pipelines	60.3
611	Ocean transport and coastal water transport abroad	61.101+61.102
613	Inland water transport	61.103+61.104 +61.105+61.106 +61.109+61.2
620	Air transport	62
631	Supporting activities of cargo handling and storage, other supporting land and air transport ativities	63.111+63.113 +63.12+63.21 +63.23+63.401+63.403+63.409
632	Other supporting water transport activities	63.112+63.22+63.402
633	Activities of travel agencies etc.	63.3
641	Post and courier activities	64.1
642	Telecommunications	64.2
**** FINANCIAL INTERMEDIATION		
651	Central banking	65.11
652	Other monetary intermediation	65.12
654	Monetary intermediation indirectly measured	
655	Other financial intermediation	65.2
659	Financial intermediation indirectly measured	
661	Life insurance	66.01
662	Pension funding	66.02
663	Non-life insurance	66.03
669	Adjustment item, insurance	
670	Acivities auxiliary to financial intermediation	67

Activity in national accounts (cont.)**Standard Industrial Classification
(NACE Rev. 1)******** REAL ESTATE, BUSINESS ACTIVITIES**

700	Real estate activities	70.1+70.202+70.3
704	Dwelling service production, for own final use	70.201+ estimated output of owner-occupiers
711	Renting of transport equipment	71.1+71.2
713	Renting of machinery and equipment and household goods etc.	71.3+71.4
720	Computer and related activities	72
730	Research and development	73
741	Legal, accounting, book-keeping and auditing activities; tax consultancy; market research and public opinion polling; business and management consultancy; holdings	74.1
742	Architectural and engineering activities and related technical consultancy	74.2+74.3
744	Advertising	74.4
745	Labour recruitment and provision of personell; investigation and security activities	74.5+74.6
747	Industrial cleaning	74.7
748	Miscellaneous business acivities n.e.c.	74.8

****** PUBLIC ADMINISTRATION AND DEFENCE, COMPULSORY SOCIAL SECURITY**

751	Public administration and compulsory social security activities	75.1+75.21+75.23 +75.24+75.25+75.3
752	Defence activities	75.22

****** EDUCATION**

800	Education	80
-----	-----------	----

****** HEALTH AND SOCIAL WORK**

851	Human health activities	85.1
852	Veterinary activities	85.2
853	Social work activities	85.3 - part of 85.329
854	Combined nursing acivities	Part of 85.1 and part of 85.3 (for local government)
859	Social work activities by disabled workers	Part of 85.329

****** OTHER COMMUNITY AND PERSONAL SERVICES**

900	Sewage and refuse disposal, sanitation and similar activities	90
910	Activities of membership organizations	91
921	Motion picture and other entertainment, new agency and cultural activities	92.1+92.3+92.4+92.5
922	Radio and television activities	92.2
926	Sporting activities and other recreational activities	92.6+92.72
927	Gambling and betting activities	92.71
930	Other service activities	93

****** DOMESTIC SERVICES**

950	Private households with employed persons	95
-----	--	----

Appendix B**Classification by kind of main activity in the tables**

Kind of main activity in the tables	Industry in national accounts (see appendix A)
Agriculture and hunting	010+014+015
Forestry and logging	020
Fishing and fish farming	051+052
Oil and gas extraction incl. services	
Oil and gas extraction	111
Service act. incidental to oil and gas extraction	112
Mining and quarrying	100+130+140
Manufacturing	
Food products, beverages and tobacco	151+152+153+154+155+156+157+158+159+160
Textiles, wearing apparel, leather	170+180+190
Wood and wood products	201+202+203+204
Pulp, paper and paper products	211+212+213
Publishing, printing, reproduction	221+222+223
Refined petroleum products	231+232
Basic chemicals	241+242+247
Chemical and mineral products	243+244+245+246+250+261+262+265+266
Basic metals	271+273+274+275
Machinery and other equipment n.e.c.	281+286+287+291+293+296+297+300+311+ 313+314+321+323+331+334+340+353+354+355
Building of ships, oil platforms and modules	351+352
Furniture and other manufacturing n.e.c.	361+362+363+371+372
Electricity and gas supply	401+402+403+404+405
Construction	451+452+453+454+455
Service industries excluded general government	
Wholesale and retail trade	501+505+510+521
Hotels and restaurants	551+553
Transport via pipelines	608
Water transport	
Ocean transport	611
Inland water and coastal transport	613
Other transport industries	601+602+603+604+605+620+631+632+633
Post and telecommunications	641+642
Financial intermediation, insurance	651+652+655+661+662+663+670
Dwelling services	704
Business services etc.	700+711+713+720+730+741+742+744+745+747+748
Personal services	502+527+800+851+852+853+854+859+900+910+ 921+922+926+927+930+950
General government	
Central government
